The House Wife's Friend.

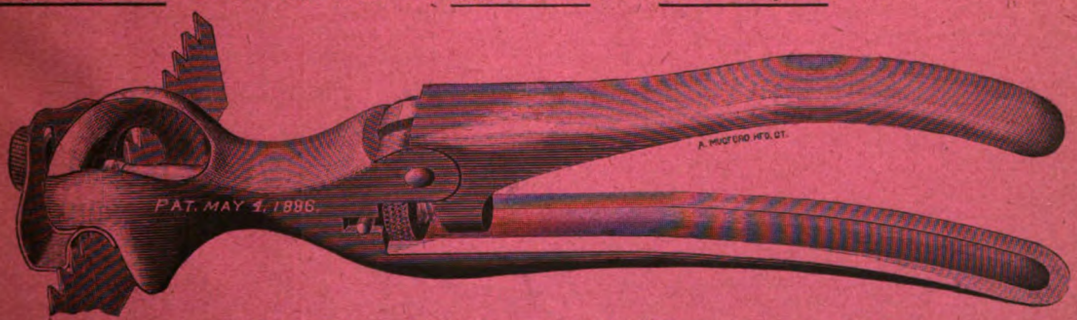
BUY IT and *TRY IT.*

A PERFECT MACHINE.

Where can you find a more complete statement of its merits or a more satisfactory recommendation of its value than the following:

A well-known and representative firm says: "We have had for sale EVERY KIND OF MEAT CUTTER MADE, and AFTER EXAMINATION OF THE MERITS OF EACH, have come to the conclusion that the LITTLE GIANT IS THE BEST OF ALL."

This season we are putting up with each Machine, WITHOUT EXTRA CHARGE, TWO PERFORATED PLATES for cutting FINE or COARSE. No Cutter better adapted to the Retail Trade than the LITTLE GIANT. All cutters thoroughly tinned. All parts well fitted.



Nos.	305.	With Clamp,	Weighs Complete,	5¼	lbs.	Cuts per Minute,	2	lbs.	Per dozen $35.00

Put up in fancy boxes of one-half dozen each.

STEEL TRAPS

With Single and Double Spring, all sizes. See that P. S. & W. Co. is stamped on the Trap.

The Peck, Stow & Wilcox Company,

Southington, Conn., and New York.

Only manufacturers of a complete line of Tinsmiths' Tools and Machines. All of their goods are made by the most experienced mechanics, and are fully warranted.

If you want the best goods, the best made, the best adapted to your work, you will secure those bearing the stamp of this Company. All of their goods are of the highest grade and of the best quality. Remember that wherever they have been exhibited in competition with similar goods of other make, they have been invariably awarded the first prize for superlative excellence.

They are not abreast, but ahead of the times. Other makers are imitators, not originators.

Compare their Cornice Brakes, Squaring Shears, Beading Machines, Double Seaming Machines and Forming Machines with other makers, and record your verdict. We will abide by it.

100,000 workmen in sheet iron and metals throughout the world are our references.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed. While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - **29 Murray Street, New York City.**

BRANCH OFFICES:

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate

In the manufacture of their Hard Grain powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made Smokeless Schultze Powder famous all over the world, while its hard flinty grain and specially regulated moisture makes loading so easy that any amateur can now do so successfully.

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U. S. Agents

Von Lengerke & Detmold, 8 Murray St, New York.

Hardware Dealers Can Profitably Sell Bicycles.

There is a large trade in bicycles in all parts of the country and much of that trade belongs naturally to dealers in Hardware. Good bicycles meet with ready sale and pay a fair percentage of profit.

COLUMBIAS

are the representative high grade machines in America. A Columbia is the easiest machine to sell to the best trade because it is unquestionably the standard wheel of the world. We want enterprising agents of good standing and solicit correspondence.

POPE MFG. CO.,

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world. because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

A BELT BY ANY OTHER NAME WON'T WEAR AS WELL.

THE CHARLES WILLEY MFG. CO.,

BAY SHORE, L. I., U. S. A.

RETAIL PRICES:

Metal Collapsible Tubes, 15 and 25c., 1-4 lb. can 35c., 1-2 lb. can 50c., 1 lb. can 75c. and 5 lb. can $3.00.

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

Pioneers and Leaders, **15 Park Row, New York.**

TO MANUFACTURERS:

Do you wish to close out for spot cash any large lots of Enameled Ware, Hardware, Cutlery, or anything suitable for House Furnishing, Hardware, or Stove stores---goods which you can sell us at prices so low that they will be PLUMS to dealers who buy from us? We do not care how large the quantity, but we do care about prices. They must be low.

TO DEALERS:

It is hard to explain on paper how goods at our prices will make your business grow. Let us send you one piece each of different goods with our prices. The samples will amount to about five dollars. After you examine the goods you can make up your order. If you don't want the samples send them back at our expense. Can anything be fairer? When you get our goods and mark them boldly at a fair profit in your window and on your counters, you will see how your trade will increase. Have some "get-up" and "go!" Wake up! Do it now.

MERK CHRISTMAS TREE HOLDER!

Patented September1st, 1891.

BUY THE BEST!

Christmas Comes But Once a Year.

If you want to make your home pleasant and cheerful during the holidays BUY A MERK CHRISTMAS TREE HOLDER, made of iron, neatly finished in gold bronze, a great improvement over any heretofore made. By an ingenious contrivance the tree is held secure by strong arms which extend upward from the main body of the receptacle in which it is placed. If desired the tree can be revolved. Sample tree holders sent by express prepaid upon receipt of **$1.** Packed in quarter and half dozen crates for shipment. Manufactured and sold only by the **ALLENTOWN HARDWARE WORKS,** Allentown, Pa.

☞ Something New. Hardware dealers and others are requested to write for descriptive circulars and wholesale prices.

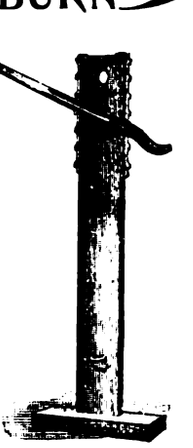
THE

AMERICAN WICK

Made by the WICK DEPARTMENT Of the STANDARD OIL CO. of NEW YORK.



Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

Large houses on Chambers Street say that the volume of business for September was fifty per cent. larger than for the same month one year ago.

The Fixing of Prices.

It is usually a very difficult matter to name the prices at which an article will sell to the greatest advantage. Sometimes the ambition of the manufacturer causes him to overreach himself, and to place a higher value upon his wares than the public are willing to pay.

A good way to fix prices has been illustrated by a Chambers Street manufacturers' agent. Given a line of goods to sell, he adopted his usual manner of pushing the trade, but at the end of the month discovered that he had not been able to make a single bill. This caused him to reflect. Were the goods of inferior quality, or were the prices too high? He reduced prices five per cent., with the result that he attracted the small trade. He then offered them to the larger trade at ten per cent. below the original price, and captured a good amount of orders. At fifteen per cent. below the first price he did a large trade, and that he found to be the stopping point. He was on solid ground, and no stories brought to him by an importuning customer would induce him to reduce prices further.

This practice is in one way or another a common one, but sometimes the test is made so reluctantly that business and profits to a large extent are lost in the hesitation of adopting it.

Business vs. Politics.

A perusal of the daily newspapers would lead the careless observer to the conclusion that the people of America were wildly excited over politics. As a matter of plain business fact, the politicians are working themselves up to the usual condition of autumn frenzy, and are loudly calling upon the people to come out and save the country, while the merchants and manufacturers are going their ways of business in peace, endeavoring to restore affairs to a normal condition after the storm of havoc that has so long raged at Washington. The business men are not in a mind to be stampeded just now. They have still a patient faith in their theories, but, as a general thing, are setting theory aside for work. They are making and selling goods just now, oiling the wheels for new operations, keeping an eye upon collections and expenses, adjusting their affairs to the new conditions, and doing a patriot's service by supplying labor for idle hands. When the time for voting comes they will all be at the polls—as some of the politicians will discover to their personal damage; but have no time now to discuss politics and make the welkin ring with their personal views of things. The politicians may not like this course of the business man, but within it, just now, lies the material salvation of our country.

The lighting of railway cars generated by the revolution of the axle of the cars has not proven the success expected of it. A train running at good speed formed the basis for a most excellent light, but this speed was not uniform, and thus the flow of electricity became uncertain, and the intervention of the storage battery hardly overcame the difficulty. Roads using this system are gradually abandoning it.

In the South the giving of long credits to the Hardware and other trades is passing away. The old custom of giving a six months' note gave way to that of four months, and this has now evolved into the custom of one of thirty or sixty days. The long credits in the South were the result of its raising one crop, and that being marketed slowly, one person had to wait upon another.

Making Tin-Plate.

AMERICAN MANUFACTURERS UNDERGOING EXPERIENCES.—THREE IMPORTANT POINTS.

The tin-plate industry of this country has been one of continuous battle. Lately it has become more pronounced, because of three factors which have entered the situation.

The first is that a London trade paper has come out boldly and said that if the Welsh manufacturers will unite, cut down wages, and sell their product at a cheap price, the control of the business can be held abroad for a long time to come. It is to be understood that the American market is the principal one of Great Britain, and that its loss has been most serious, and that an effort upon the part of the Welsh manufacturer in the struggle for existence is not wrong in a commercial sense.

The second trouble is in the new tariff law. While this makes pig tin free, and hardly anyone now will admit in view of the absolute failure of our mines to produce this product, that this part of the old law was not a mistake, still the abrogation of this tax amounts to very little. Very little tin enters into the production of tin-plate. The reduction in the duty on tin-plate is most serious. It amounts to about twenty-five per cent., and the prices realized lately have shrunk to that extent.

The third factor, and the most important trouble, then resolves itself into one of labor. The industry is comparatively new, and few laborers skilled in that line could be found in this country when the industry was started. For these men as high as ten dollars per day has been paid, and as a rule five dollars has been the minimum.

The men have formed themselves into an association, and it is admitted that it is in its way, one of the strongest in the country. They, so far, have refused to yield to a reduction in their wages, but are still in council, with an undetermined result. The manufacturers ask them to accept a reduction of twenty-five per cent., and as J. L. Somers, of Brooklyn, said the other day to a HARDWARE reporter, "they will then receive one hundred per cent. more than their fellow laborers in Wales."

Upon this the whole question hinges. Every tin-plate manufactory in the United States has been compelled to close down with the exception of one, and the latter is notable. The mill is owned by a Welshman, who is also the proprietor of several establishments in Wales. This fact has provoked much comment, and has given rise to the opinion that there are some subtile influences at work to crush the industry in this country. Nothing tangible, however, can be traced in this direction; it is a suspicion founded upon intuition.

The manufacture of tin-plate in this country depends largely upon the rolling of what is termed the "black sheet." For fine grades this has to be of a thinness that will bend over upon itself almost like paper. For a long time this could not be done in this country, and the industry was confined to what is called "dipping," something rather insignificant. Now the black sheets are made in this country, and the tin-plate, as Mr. Somers avers, is better, grade by grade, than that made abroad. It does not blister, and in smoothness it is a superior article.

There are two descriptions of plate made; the terne and the tin; the former coating the plate with lead and zinc, and the latter with tin. The terne-plate industry has prospered in this country for many years, but the tin-plate proper seems to be handicapped.

The Welshman gets his ores from Spain, and they can be obtained very cheaply. The American manufacturer gets his from Pittsburg, and while it is a better grade the consumer has hardly learned to discriminate, and fails to appreciate a better quality when a higher price is demanded.

The production of tin-plate now in this country is equal to one-third of the demand, a most gratifying exhibit for the home industry. The manufacturers feel that they can retain this industry here, for there are immutable laws of political economy that are working in their interest.

Still, the situation at the moment depends largely upon the decision of the workmen, for in the present state of prices, it will be found impossible to resume operations and pay the present scale of wages.

"Modern History."

Under the above striking heading, Stransky & Co., No. 29 Murray Street, New York, relate the following entertaining piece of business history:

"Mr. Huxley, our New England salesman, says: 'I called on Brownell the other day. He's got one of those old fashioned fronts—8x10 window panes—dressed same way the last twenty-seven years. Talked my prettiest to sell him some of our goods. At first, no use. He didn't have room inside; didn't have room in the window; didn't think he could stir it up; didn't this and didn't that. 'What's the matter with putting the goods outside right up against your show window and filling your whole window for a week or so?' 'Well,' says Brownell, 'that might go.' He who hesitates has won. I talked some more and finally got him. Two weeks afterwards I met a traveling man from a competing house. He told me that Brownell said: 'Well, Stransky & Co. gave me a big racket. That outside show and those goods in the window went like the dickens.'

"Dealers, if you're asleep we wouldn't care to disturb your gentle slumbers. But if you're awake let us send you just one piece each of our Plums—our business boomers. It's not a big spec. Amounts to about five dollars! From the samples you can re-order. Up to date 57 dealers ordered samples, 2 returned them, 38 re-ordered, 11 ordered twice, 6 have re-ordered three times. Shall we send you samples?

"STRANSKY & CO.,
"No. 29 Murray Street, New York."

Something About Sash Weights.

The old theory that "anything would do for a Sash Weight" is being rapidly changed, and now the enterprising Harewaremen insist upon having them free from lumps and fins, and to weigh as marked. Round weights must be tapered at each end, so that they will pass each other freely in the box. Sash Weights are intended to balance a window, and unless they do so, they are a continual source of annoyance and bad temper. The improvements made in sash pulleys and the advent of chain and ribbon, whereby friction has been reduced to a minimum, has done much to force an improvement in the quality of the Weights. The practice of making these 5 per cent. or 10 per cent. light, is just as dishonest as selling 12 ounces of sugar for a pound—somebody is sure to be cheated; it may be the dealer, it may be the carpenter, and it may be the house owner.

The above sound business sense was furnished a representative of HARDWARE by a member of the firm of E. E. Brown & Co., McKean and Meadow Streets, Philadelphia, whose record in the making of first-class Sash Weights is certainly such as to make them authority upon the question discussed. In continuation, this gentleman says: "In Special Weights and Lead Weights, the manufacturer should exercise great care. We, for instance, find the best results are only obtained by keeping men especially trained in both the moulding and the looking up of this class of work."

Peoli & Willey, No. 97 Chambers Street, New York, are a new firm devoted to cutlery and Hardware specialties, with especial reference to the export trade. D. R. Peoli has been export manager for the Electric Cutlery Co,, while A. H. Willey was salesman, and later in charge of the New York office, of the same well-known company. The new firm represent the Swedish Razor Co., Worcester, Mass.; the R. W. Rogers Co., Niagara Falls, N. Y.; Charles J. Mauss, Staten Island; Benj. F. Badger Strap Co., Boston, Mass., and others.

Will the air-pump supersede the carpet-sweeper? It is said that there is a new device in existence by which compressed air is blown into a room by means of a hose. The air is sent with such force that it is said to search out and penetrate the dust in every crevice of the woodwork, in the openings in furniture, etc.

In Old Vermont.

THE IOWA CORRESPONDENT OF "HARDWARE" TAKES A VACATION.

It was hot, dusty and dry in Davenport, and we were dry, dusty and hot.

My doctor, for a consideration, prescribed mountain air, fresh fish and spring water.

Hardware prices insisted upon going down; the mercury persisted in going up; so, with instructions to our buyers to secure a special 2½ on all purchases, to our price man to add a little, to pay traveling expenses, to the collector to urge collections, and to the bookkeeper to be ready at all times to respond to drafts at "no days' sight," we procured tickets to this grand old Green Mountain State.

To reach our destination we took the route through the picturesque Connecticut valley. The White mountain range in full view on our right, the more fascinating Green mountains on our left, the well tilled fields all about, white farm-houses with green shutters, extensive red barns, neat villages, thrifty towns, prosperous manufacturing cities—made a continual changing picture; while driving over the smooth road-bed, an elegant parlor car with spacious chairs and lounges, and pleasant company, all conspired to make the journey delightful indeed.

Your editor requested a letter from New England. We are in New England, but so far we fail to see the newness of this portion of the country, although we are told Vermont is the youngest of the New England States. After the revolutionary war, Vermont, for four years, ran an independent government of its own, then bluffed New Hampshire out of a claim it had on its territory, paid the State of New York thirty thousand dollars for a quit claim deed on itself, and rapped for admission into the United States, becoming the fourteenth State of the Union.

To a westerner everything seemed old instead of new. The buildings are old, the manner, dialect and customs of the people are old; even the granite, the finest in the world, is gray.

A centennial church celebration was held at Peacham a few weeks ago, and the people rejoiced in the fact that one preacher had occupied the pulpit in that church two-fifths of the century. How old some of the sermons must have become in that forty years of constant preaching!

We are glad we are in New England and in Vermont, and wish we could remain until Thanksgiving turkeys and mince pies are ripe. Speaking of pies, do you know we are right in the very centre of the New England pie belt? And Vermont pies are good. In fact, good things are plenty in Vermont in autumn-time. Then the scenery is so beautiful. Were I as familiar with the use of pen or pencil as with buying or selling barb wire and nails, I would like to describe the autumnal scenes of Vermont; the different shades of leaves, some golden, some saffron, then shaded up into pinkish hues, and even into the deep reds and scarlets; set off, here and there, with the rich evergreens; all mingled so delicately, woven and interwoven with such perfect harmony, producing perfect bouquets extending miles and miles through forests and glades, meadows and pastures, from valley to hilltop—grand in extent, charming the senses, a delight to the eye and a rest to the soul.

Would you lure me to the art galleries of Europe? There is as much difference between those and the scenes before me, as there is in the artists.

The Lakeside Cottage Hotel had closed for the season, but on our arrival was reopened expressly for us and for the exclusive use of our party. We have a steam yacht at our disposal, spend the days in fishing, hunting, driving and long tramps among the hills and along the winding roads. The evenings are spent around the blazing open fireplace, recounting the experiences of the day—hunting experiences, game shot that could not be found, large fish caught but not landed, funny episodes, and in playing cards and exchanging inaccuracies.

However, the table is supplied with gray squirrels and partridges by our own Nimrods and fish from our own lines. In short, we are having an old fashioned good time. No one locality has a mortgage on all the good things of earth, but Vermont in autumn possesses more than any one place yet discovered by

J. R. NUTTING.

West Barnet, Vt., September 24, 1894.

The Hardware in the Hotel Majestic.

The Reading Hardware Co., Reading, Pa., and Nos. 96 and 98 Reade Street, New York, furnished all the Locks, Bronze Hardware and special ornaments in solid bronze for the immense new Hotel Majestic, on Seventy-second Street and Central Park West, New York. On all the main entrance doors are 6¼ inch "Vassar" Cylinder Locks, with escutcheon plates and knobs in Italian Renaissance, surrounded by specially made crest with coat of arms. These doors are swung on extra heavy self-lubricating butts. The push plates matching other trimmings measure 4½ x 24 inches, and the kick plates, which are of solid plain bronze, measure 11 x 42 inches. The beautiful metal ornaments that are used to decorate the pillars in the main saloon and dining-rooms, and also those on the wainscoting, were made by the Reading Hardware Co. from special designs. A fine grade of three-tumbler hand-made locks is used throughout all the lower floors; the ornamentation being in Italian Renaissance, finished in gold and silver.

Some idea of the vast quantities of Hardware required for a building like the Majestic may be had by referring to the following approximate figures: There were used about 3000 pairs of door butts; 3000 locks for chamber and communicating doors, with a thorough and complete system of master keying; 1600 solid bronze numbers, and many tons of miscellaneous goods in bronze and iron.

The new sample rooms of the Reading Hardware Co., at No. 96 and 98 Reade Street, which have been recently fitted up in modern style, are worthy of special mention as of the finest in the city, and will well repay a visit. The main floor is 50 x 75 feet, and is divided by partitions of plate glass and quartered oak into convenient departments for the manager, Fred L. Stellwagen, and his assistants. The sample room, 16 x 30 feet, is arranged with all the taste of a modern home. Here are cabinets containing samples of artistic Hardware in every school and design, and in a great variety of finishes, all of which may be examined and selected from in appropriate surroundings, and under conditions the most favorable for making a proper choice.

The Coming Sportsmen's Exposition.

The organization and details of the Sportsmen's Exposition, which will take place in the Madison Square Garden in New York, May 8th to 13th, 1895, are progressing rapidly. At a meeting held at the office of the Winchester Repeating Arms Co., No. 312 Broadway, New York, September 20th, the following sub-committee were appointed to confer with Frank W. Sanger, the manager of the Garden: J. W. Spalding, F. S. Webster, J. C. Von Lengerke and J. A. Dressel. This committee have authority to sign a contract and to fix rentals. This part of the work is progressing rapidly, Mr. Dressel, who is chairman of the special committee as well as treasurer and chairman of the executive committee, having the matter in charge, and carrying the work on in an energetic manner.

Meetings of the different officers and committees are held regularly, and it is expected that all matters will assume definite shape in a few days. Charles Tatham is president of the exposition.

The Cleveland Twist Drill Co., Cleveland, Ohio, report the pleasant and cheering fact that business is steadily improving. They find direct evidence of this in the fact that they are running their full compliment of men ten hours a day, and have been doing so for some time.

Upon the four pages of colored insert in the front and back parts of this issue, the old and prominent house of Peck, Stow & Wilcox have something to say upon various questions of interest to the trade.

He Visited the Hardware Club.

An English Hardwareman who is making a tour of America, writes to the London *Hardwareman*, as follows, concerning the New York Hardware Club: "Our luggage comprised a lawn mower and samples of sundry Hardware specialties, which we declared to the Customs officer to be of the value not exceeding twenty dollars. For our candor and honesty we had to pay nine dollars duty, the rate being forty-five per cent. upon all such goods—we mean the lawn mower and the Hardware, not the candor and honesty. We then booked our luggage through to the hotel, and made our way thither on foot. Having secured our quarters, we made straight for Reade and Chambers Streets, these being the streets in which are located the offices and showrooms of the leading Hardware manufacturers of the city. Within two hours of our arrival we were installed at the Hardware Club in Broadway, enjoying the hospitality of the Hardwaremen of this great cosmopolis. How hearty their greeting is! how pleased they seem to see us! We feel instinctively that we are among friends, and immediately feel at home. A word about this Hardware Club. Like all other things among our Yankee friends, this is properly done. The Club is located right in the heart of the Hardware fraternity, and in one of the finest buildings on Broadway. It is something like thirteen stories up, rather an advantage than otherwise. Express elevators running all day long land you in a few seconds at the top; and there you are away from the bustle, noise, and dust of the street, with a magnificent view of the Hudson River and the city of New York. The Club itself is fitted up regardless of expense, and in its furniture and upholstery will rank with any of our political West End clubs. There is a restaurant with seating accommodation for one hundred guests, and between the hours of twelve and two o'clock a lively scene it is as the 'men of metal' meet to dine and chat. There are also smoking, reception and committee rooms, and the usual offices; also a reading room furnished with all the trade literature, and a writing room—in fact, here is every convenience and luxury. And, now, Mr. Editor, why, in the world, have we no Hardware Club in the old country? There is room for one in London, and in Birmingham, surely; and, if the trade would only co-operate as they have done in America, we might have a club that would rival theirs."

The Mechanical Rubber Trade.

Rubber men say that the volume of business this year has been comparatively as large as in those just preceding. The equipment of railway trains with the air-brake, which will soon be imperative by national law, is progressing rapidly, and this in itself is a large factor in the rubber trade. A great many manufactories have resumed, which had closed down during the depression, and this has called for mill supplies in large proportions. The season for three-quarter hose is now passing, but the demand for hose continues. The sale of belts for threshing machines in the West has been very fair. There has been a good business done by those who make a specialty of steamship supplies. The pneumatic tire business, as everyone is aware, is good. Some large mechanical concerns have started up recently on old plants. All in all, the mechanical rubber business is in as good shape as any that can be readily mentioned.

Chinamen Buying Guns.

A unique sight at the present time is the number of Chinamen who can be seen in the various gun stores purchasing firearms. In one store on Broadway could have been seen the other day a dozen Mongolians, each carefully examining a rifle, and in their way expressing themselves as to the peculiar merits of the arm in question. As a rule they were solicitous as to the mechanism devoted to breech loading, but once in a while an enthusiast would raise the rifle to his shoulder, and in his imagination think of the result. Dealers say that considerable quantities of small arms, as well as rifles, have been bought ostensibly for the purpose of shipping to friends in China. Generally the assemblage of these Chinamen attracts a crowd of Caucasians on the sidewalk, who look with wondering or philosophical eyes according to the temperament of each individual, upon the curious picture displayed before them.

Hardware Club Notes.

The following gentlemen have been unanimously elected to membership in the New York Hardware Club since our last report:

Geo. A. Gardner, No. 64 Reade Street.
Charles L. R. Clark, No. 298 Broadway.
John J. Walton, No. 164 Chambers Street.
James Clarke, No. 45 Vesey Street.

Among the many recent visitors to the Hardware Club were the following: Major J. L. Foley, Cincinnati; Louis Marx, Havana; J. B. Pound, Chatanooga; F. W. Cameron, Boston; W. K. Ross, Chicago; F. C. Stover, San Francisco; J. E. Jenkes, Pawtucket; A. M. Marshall, Duluth; C. W. Danzinger, Pittsburg; E. H. Linley, St. Louis; Bancroft Ellis, England; Wm. Heyburn, Louisville; E. J. Walter, Baltimore; E D. Simpson, Philadelphia; F. B. Scott, Syracuse; H. E. Dick, Chicago; A. W. Walker, Erie; E. C. Fuller, Chicago; Col. Benj. S. Lovell, Boston; Courtlandt C. Clarke, Chicago; Thomas Hobson, Philadelphia; A. C. Johnston, Kingston, Ont.; W. Stauffer, New Orleans; J. S. Barcus, Toledo; J. L. Jennings, New Haven; George W. Edwards, Detroit.

Charles H. Dudley, a Boston merchant, died in that city some days since at the age of sixty-three. He entered the Hardware store of Proctor & Butler in 1841, and remained as an efficient and principal salesman until the new firm of Butler, Sise & Co. was formed, and the place of business changed to the corner of Batterymarch and Milk Streets, when he became a partner. At the time of the great fire in 1872, they, with a host of others, were burned out, and the affairs of the concern were closed up. Mr. Dudley for many years afterwards was connected with other prominent houses. As a salesman in the Hardware trade he hardly had a superior. He was largely known among the Western business men as authority in all matters pertaining to the Hardware branch of trade, his judgment being often solicited by those who knew him. He had a most pleasing address, and was genial and polite in social and business relations.

The Russell & Erwin Mfg. Co, Nos. 43 and 45 Chambers Street, New York, have placed in the front part of their sample department some handsome sample cases, with flat plate glass tops, cupboards, interior drawers, etc. These cases are not only handsome and artistic, but very convenient in the way of showing goods.

"It was autumn, and incessant
Piped the quails from shocks and sheaves,"

is the quotation that heads the Jos. Dixon Crucible Co. calendar card for October. The quail shown seems to be of the New Jersey variety, while the shock from which he is piping is formed of Dixon's American Graphite Pencils.

C. L. Ovitt, who makes Hardware a part of his general merchandise stock, West Enosburgh, Vt., has been upon a business visit to New York.

Question and Answer.

EDITOR HARDWARE: I am contemplating the purchase of a retail store and business. Should I be expected to pay a bonus? A PURCHASER.
Erie, Pa, October 6, 1894.

That question, in our view of the case, should be answered in the affirmative. The seller has probably worked years to build up a trade, and has probably, especially in the early days thereof, had an anxiety common to all pioneers, and which has its value. Customers who have been slowly educated to come to the store will meet the new proprietor very pleasantly, and half of the battle has been fought in advance and by another. Of course, there may be exceptions to the rule; a high rent, a poor locality, and the like in which a bonus could not be reasonably obtained, but the general inclination is in the way mentioned.

Six Letters To a Clerk.—IV.

MORAL ANCHORS WHICH YOUNG MEN SHOULD HOLD BY.

Don't turn away from my letter, Tom, because I have headed it like a trade dictionary; I am not intending to write an essay on ship anchors, their uses and value, but I want to write about the moral anchors which every young man should heave out, once in a while, on his course, not to prevent his progress, but to keep him from falling out of the right track.

The boy who stays in the town where he was born and bred and still has his parents' watchful care over him will find it a tolerably easy task to keep on the right course, but when he goes to a strange place, and if that place is a large city, with the temptations and allurements that are found in nearly every city, he will find that it requires no small amount of force of character to keep him on the right track.

Youth is full of desire to see and have a part in all that goes to make up life. While the boy has been at home, he has felt the eyes of friends upon him so closely that he has avoided much that he would like to see. The good things of the world have been brought to him until they have lost their value, while the other side of life has been carefully kept from his sight. When he is away from all control, perhaps unknown to a person in the city except his employers, he determines to see all sides and corners of life. If there are but two or three clerks in the store with him, there is sure to be among them one who can gratify his curiosity by tales of the under side of life, and as he gets acquainted at his boarding-house he soon hears his cronies discussing and dilating upon matters of which he has yet to learn the alphabet. But there will be plenty of opportunities for him to learn the whole book. Scarcely a night but some one will suggest a trip or a walk that will lead him a little nearer to the ground that has been forbidden him, and as his acquaintance extends so do his opportunities for seeing what he calls "life."

If I were writing a sermon or drawing a moral lesson, I might stop here and speak of the hollowness of all such pleasures as this young man is anxious to taste; but I am not attempting a sermon, and am looking at a young man's life only as it may affect his business career. Now I cannot write that a young man who takes a step downward in life is surely lost, because I do not believe it; but I do believe that it is very easy riding when you are going down hill, and the farther down you get the harder it is to stop. And so I come to my anchors.

I advise you to put out, here and there, anchors that will help you to keep on the right course. And the first of these might be to select a church where you will attend, if not regularly, at least with some degree of regularity. I do not say that you must not do anything more than simply go to church once in a while; you can go as often as you please after you have decided where you will attend. Going to this church, you will soon get acquainted with some of the members, and through them with others, and then you will feel at home there, and the people will have an interest in you. And the time may come when you will go there carelessly, just because it is your habit to go there of a Sunday, and you may hear a sermon that will appeal personally to yourself, and your whole life may be changed by it, until your past life will be a shame to you and your future be better and brighter because of your resolutions formed that day.

Or it may be that no such high motive shall ever enter your heart, and you may go on from Sunday to Sunday simply from habit, but the nod of welcome from those you meet is pleasant to you, and the hearty hand-shake from pastor or deacon makes you feel more of a man. And an hour may come when you will be held back from evil just by the thought that you will lose the respect of these good men, and *then* you will feel that this anchor holds you on in your course.

Another anchor will be getting acquainted with good women. It is easily done by a young man whose name is without reproach. Some of your brother clerks have sisters and will be willing to make you acquainted; your employers will be glad to see you calling upon their wives; your church will have sociables and opportunities where you can extend your acquaintance among the ladies, and you should avail yourself of these. In all this I am not advising you to be with the girls; you will do this without advice, but my advice is to make friends of the *women*.

Women who have passed young girlhood appreciate attentions from young men. Girls accept these attentions as a matter of course, and as being homage to which they are justly entitled, but women accept them at their value and feel kindly towards those who offer them. One can sit with a company of girls for a month and know no more about life, as it really is, than if he had sat before a cage of canaries, but a woman's instincts tell her what a young man needs, and he cannot spend an hour with her without learning something that it will be well for him to remember.

Another source of strength to any young man is the love of reading and of good books. This is a taste that can be cultivated, and will be a source of infinite pleasure through all the years of life, whether one is rich or poor, clerk or merchant. The man who reads has a fund of pleasure to draw upon whenever there is danger of time hanging heavily on his hands. He need not yawn about billiard rooms, nor hang around saloons because the hours are so dreary; he can turn to a book and enjoy the company he finds therein. I count the love of reading as one of the accomplishments that ought to be cultivated in every family. Most men set altogether too light a value upon it, and in some households a hundred dollars are expended on a party with less thought than one dollar is used for good reading. If children are not encouraged to read, it is a taste not so readily learned in after life, and one of the surest anchors that parents can give to their sons as they send them out in the world is this one—a love for books.

I am afraid some of our friends, my dear Tom, will read this letter and blame me for not writing on a higher plane, and perhaps they would be right; but I have written for those who need it, those who are liable to be drawn into the temptations of life; others who will not be so tempted are not in need of anchors.

AN OLD MERCHANT.

New York, September, 1894.

He Didn't Want Much.

"On the steamer from New York to Gibralter I had the pleasure of meeting the representative of the Sultan of Morocco, who was on his way home from Chicago, whither he had been sent to select a site at the World's Fair for the Moorish exhibit, and to perfect the necessary arrangements therefor. His name was Hassam Ben Ali. I found him a particularly clever fellow, and by the time the steamer reached Tangier, he gave me a cordial invitation to continue the trip with him to the city of Fez. I regretted that this arrangement was impracticable at the time, but Ben Ali did not give me up without seeing me comfortably fixed at the residence of a merchant and banker—the richest man in Tangier. This man lived in a perfect palace situated upon an elevated plateau overlooking the Mediterranean. On the slope of his estate toward the sea were magnificent groves of orange, lemon and olive trees, and altogether the place was a small paradise. The owner's hospitality was unbounded. His donkeys, his camels, his horses, his wines—all were mine for the five never-to-be-forgotten days I spent with him. I learned, too, quite to my surprise, that he had been to New York and spent some time in this town a few years previously.

"When the time came for me to take my departure I thought I would at least ask if there was not some way in which I could show my gratitude for his gracious treatment—whether there was not something he would like to have me send him from America. I confess I made the suggestion with some trepidation lest he might signify a desire for a Pullman palace car or team of trotters, or some other equally impossible thing. Imagine my surprise, therefore, when he asked if he might have the pleasure of receiving a box of liver pills, and two bottles of cement!"—*H. M. Barron, in the American Grocer.*

On this date, October 10th, Edward Ingalls, southern representative of the Atha Tool Co., Newark, N. J., will be united in marriage to one of Buffalo's fairest daughters. The Hardware boys all over the country will wish the happy couple much joy.

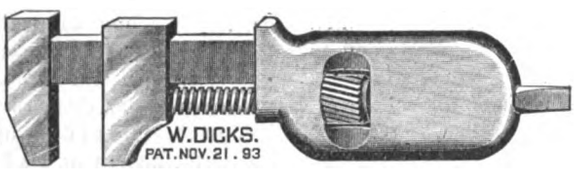
Illustrated Bicycle Novelties.

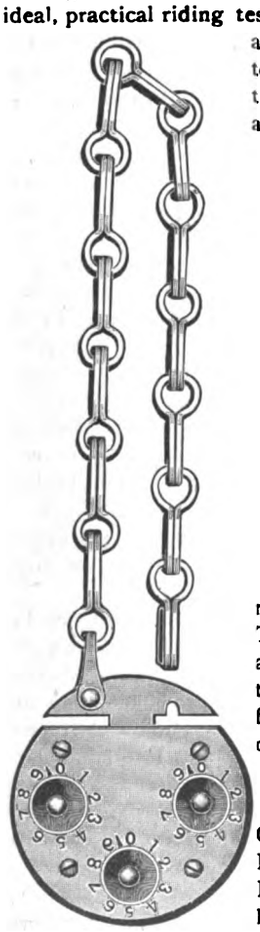


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

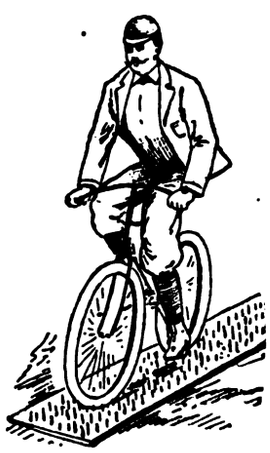
Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is go ng on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Dicks' Bicycle Wrench.



The Dicks' Bicycle Wrench here shown was patented by W. Dicks in November, 1893, and is being placed upon the market by the Spaulding Machine Screw Co., Buffalo, N. Y., sole manu-



facturers. It has a screwdriver attachment, is drop-forged, and four and seven-eights inches long. The makers describe it as thoroughly first-class, and add that because of its screwdriver attachment, "will at once commend itself to bicycle riders." The screwdriver is covered when the jaws are closed. The illustration conveys a good idea of the solid character of the Wrench. Price per doz., nickeled, $10. Discounts on application.

A Punctureless Armor.

We explain a plan adopted by the Punctureless Tire Armor Co., of Hagerstown, Md., for rendering any inner tube pneumatie tire punctureless in riding over anything. They describe it as follows: "A thin flexible band or armor made of tough, fibrous materials weighing about four ounces each, is inserted between the air tube and ground surface of the tire, which takes the impact of the puncturing or cutting obstruction without any injury to the rubber air tube. The device has been publicly tested before thousands of witnesses, over the points of the sharpest of steel wire nails and four-pointed barbed wire fencing, with all kinds of weight riders in the saddle, giving ideal, practical riding tests, and never had a puncture to the air tube. This plan of building and protecting pneumatic tires makes it practical to use them on the road to wagons and vehicles of any description. The

resiliency of the tire is not affected. The armor is kept in stock to fit 26, 28 and 30 inch wheels, and can be made to fit any size made." They will send fuller information to anyone interested, on application.

Permutation Bicycle Lock.

The Hall Mfg. Co., Wallingford, Conn., are offering a new Permutation Bicycle Lock, which we here illustrate. It is about the size of a silver half dollar, and with the chain, weighs but one ounce. It is described as having 999 possible changes of combination; simple in construction, and impossible to pick. The lock as here shown, is open; to close it, the chain is slipped into the notch and the keeper pushed down.

"Hot Stuff" Chain Lubricant.

Leonard N. Swift, Provincetown, Mass., is placing upon the market the article described under the above name. It is a lubricant especially prepared for bicycle chains, and the maker says "has been thoroughly tested and pronounced A1." He

adds: "It will stop all rattling of chains, make them run easier, better, wear longer and will not collect dust; will not soil the hands when using. Price per stick, 25 cents. Discount to dealers." It is further said to be in use by such riders as E. C. Bald, Ray McDonald, William T. Murphy, J. S. Johnson and others. A patent for the composition has been applied for, and trade mark registered.

Burleigh's Bicycle Watch Carrier.

George R. Burleigh, Tilton, N. H., a practical watchmaker, while making a hundred mile run on his wheel, wearing sweater and knickerbockers, found he had no watch pocket, so he put his watch in the trousers. The constant friction of the watch rubbing up and down wore the skin off his leg, which reminded him of the need of some device to hold a watch, consequently Burleigh's Bicycle Watch Carrier. It is made of the best steel wire, covered with woven linen thread. Made in one style

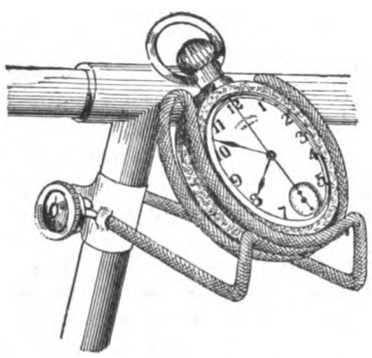


FIG. 1.—BURLEIGH'S BICYCLE WATCH CARRIER.

only, which will hold chronograph, common watch, watch clock and little two inch clock. To time speed, put the chronograph near the handle, so the rider will not be obliged to remove his hand from handle. In this way the rider obtains his own speed without the knowledge of others. "It is best to put a common watch on the head of the wheel or on the frame. The inventor of this carrier is a watchmaker and has tested it over many miles of the Granite State hills and rough woods, and will warrant it not to damage the best of watches, as the watch is held at an angle and gets the spring from the wire that goes from the clamp to wheel, which is four inches long. To put the watch in the carrier, press lower corners with thumb and

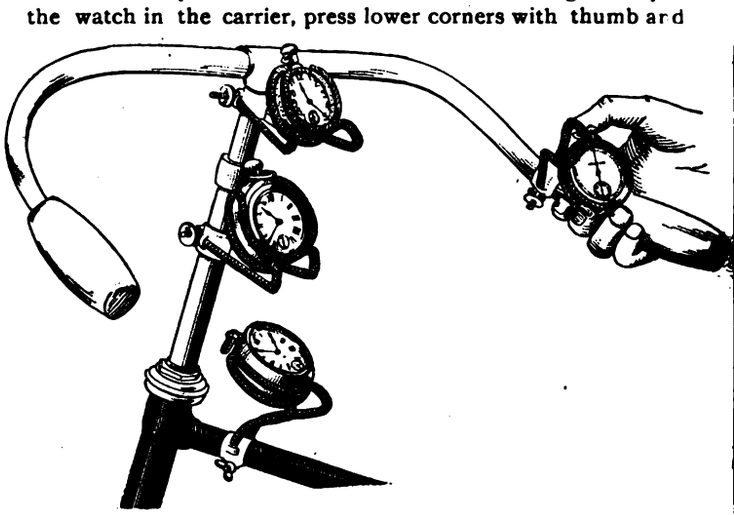

FIG. 2.—CARRIERS FOR WATCH, CLOCK AND CHRONOGRAPH.

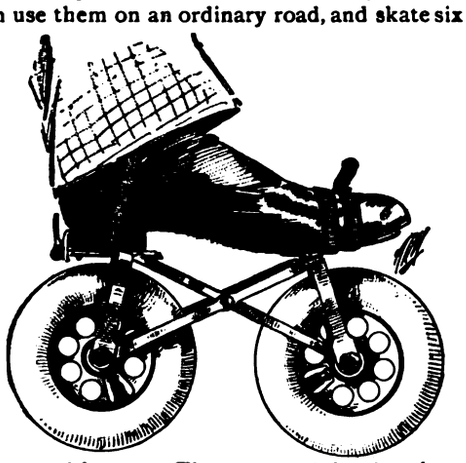
forefinger, which opens the space so watch can be inserted. A speed table accompanies each carrier, giving the number of strokes of the pedal in fifteen seconds for any speed from six minutes down to 2:30." The inventor has a steel spring clip that fastens on the dashboard of a buggy or carriage, so ar-

Digitized by Google

ranged that it also serves as a rein-holder. This is designed particularly for doctors, stage drivers and those whose business compels them to ride continuously.



Levy Cycle Clock.

The Levy Cycle Clock Co., No. 1817 Ridge Avenue, Philadelphia, Pa., are placing upon the market the Levy Cycle Clock, which has been improved recently, so that it can be wound and set without removing from the wheel. This has been done by means of a lever ratchet key, which they have patented. In description of the Clock, they say: "Is well made in a nickel case, two inch dial 1⅛ inches thick, weight with Carrier about 4½ ounces, has fine Marine movement with second hand; warranted a good time-keeper. The leather carrier and rubber guard ring save the Clock from all jar. Will run correctly on or off the wheel; price, $2.25, from cycle dealers or direct." In further commendation, we quote the opinion of a practical wheelman, who says: "It is an excellent time-keeper, and it is not only valuable and convenient on the bicycle, but is a most attractive time-piece to use in one's room. The Clock to the scorcher is invaluable, but its uses do not stop here, for the tourist and the occasional rider will find it of the greatest convenience; is well made and accurate, running in any position and under the most severe tests of vibration. The nickel case proper is covered with a neat leather carrier which protects the Clock from actual damage. We have tested this Clock and find it all that is claimed for it by the maker, Simon C. Levy." Mr. Levy would like to hear from any Hardwareman who is interested in bicycle novelties.

The Skacycle.

The Skacyle Mfg. Co., Nos. 3103 and 3105 Ludlow Street, Philadelphia, are placing upon the market under the above name a roller skate with a pneumatic tire. They describe it as a practical pair of skates that can be used upon an ordinary road. They add that this is an American invention, patented some years ago, "but not useful until now, on account of the failure to secure pneumatic tires that would prove serviceable; a man can use them on an ordinary road, and skate six or seven

miles an hour with ease. They are not hard to learn on, and anyone familiar with the use of the roller skate can put them on and with little practice skate on the road at a seven miles an hour gait." The wheels are adjusted on ball-bearing axles.

Bicycles in the Hardware Trade.

INCORPORATIONS, NEW FIRMS, AND WHEELS ADDED BY THOSE ALREADY EXISTING.

Washington, D. C.—W. W. Gordon has opened business at No. 742 Seventh Street, S. E., doing bicycle repairing, handling bicycle sundries, and acting as agent for the Overland Bicycle, manufactured by Rouse, Hazard & Co., Peoria, Ill.

Washington, D. C.—E. S. Keys has opened new repair shop at No. 105 H Street, N. E., and invites correspondence with manufacturers of bicycles and bicycle sundries, looking to accepting agencies.

New Haven, Conn.—The Pope Mannesmann Co. will apply for a charter with a capital stock of $750,000, to have the exclusive right to manufacture seamless bicycle and water tubes in the United States, by what is known as the Mannesmann process. Colonel Pope, of the Pope Mfg. Co., will be one of the incorporators.

Kansas City, Mo.—The Eggnew Bicycle Co, incorporated; capital stock, $12,000.

Charleston, S. C.—The Charleston Electroplating & Bicycle Repair Co., organized, with W. H. Simmons, president, and W. W. Simmons, secretary.

Terre Haute, Ind.—The Standard Wheel Co., whose plant has been idle nearly two years, having accumulated large stocks before they shut down, have announced their intention to resume operations in their several factories by the first of October.

Grand Rapids, Mich.—Rev. C. B. Whittaker and other clergymen are reported to be organizing a company, to manufacture a new kind of safety bicycle, manipulated by levers, and designed to weigh 25 pounds.

Plymouth, Ind.—The Indiana Novelty Mfg. Co., manufacturers of the Plymouth Interlocked Wood Bicycle Rims, have placed agency for Great Britain and the continent with S. Giuterman & Co., London, Eng.

Cortland, N. Y.—The Hitchcock Mfg. Co., wagons and cutters, are preparing to go extensively into the manufacture of bicycles, turning out 10,000 high grade wheels during the next year.

Philadelphia, Pa.—The Pennsylvania Bicycle Co. will open branch store at No. 2315 Spring Garden Street, with A. G. Powell in charge. The Warwick, the League Chainless, and the Royal, Limited, will be handled, together with bicycle sundries.

Denver, Col.—The George Mayer Hardware Co., No. 1714 Lawrence Street, opened a bicycle department, and will handle the Tribune wheel.

Hamburg, Pa.—W. H. Wilhelm & Co. announce their intention to double their output of wheels during the next year. Their new factory building is rapidly approaching completion.

New York, N. Y.—The League Cycle Co. have recently opened branch office at No. 64 Cortlandt Street, with Elliott Burris in charge.

Chicago, Ill.—The New York Tire Co. have recently opened Western office in the Caxton Building.

Cleveland, Ohio.—The Cleveland Bicycle Machine Screw Co. will enlarge their present factory. This concern have recently contracted with the Gormully & Jeffery Mfg. Co. to furnish steel balls for one-third of the latter company's next year's output.

Philadelphia, Pa.—The Americus Cycle Co. succeeds to the business of Joseph Landschurtz, and has removed to No. 1016 Girard Avenue.

Torrington, Conn.—The Excelsior Needle Co., manufacturers of bicycle spokes, have made several recent shipments to foreign countries, particularly to England and France.

New York, N. Y.—The United States Tire Co., incorporated to manufacture pneumatic tires; capital stock, $500,000.

Chicago, Ill.—The Derby Cycle Co., incorporated at Jackson, Mich., with a capital of $50,000, to manufacture bicycles and tricycles, with prison labor.

Philadelphia, Pa.—The Hart Cycle Co. are preparing to remove to larger quarters at No. 816 Arch Street. The company report that the August sales were $700 in excess of the same month last year.

Denver, Col.—W. L. Goyett, formerly with the Stokes Mfg. Co., has opened bicycle repair shop at No. 734 Eleventh Street.

Cowansville, Can.—W. F. Vilas, agricultural implement manufacturer, of East Farnham, Quebec, announces his intention to establish a large foundry and bicycle factory at this place.

Reading, Pa.—Acme Mfg. Co., successors to the Metropolitan Co., will double capacity during the next year. The company manufacture the Stormer bicycle.

Kittery, Me.—The Universal Cycle Co., incorporated; capital stock, $100,000; will manufacture and deal in bicycles, unicycles and other forms of velocipedes.

Boston, Mass.—Cutter, Wood & Stevens, No. 131 Pearl Street, are putting on the market two new polishing and buffing machines for finishing bicycle frames.

Chinese Jewlery.

The first thing that attracts the attention of the European on landing at Shanghai and Hong Kong, says a correspondent of the *Society of Arts* journal, is the quaintness and quantity of jewelry worn by Chinese women in their hair. It varies from place to place, so that the careful student, after a little experience, can tell where a woman comes from by simply looking at the ornaments on her head. There are first the purely decorative pins, the finest kinds of which are made of gold. Below these are silver ones; and below these, for the poorer classes, are brass ones tipped with either of the precious metals. In addition to metal, ivory, ebony, horn, tortoise shell, bamboo, and celluloid are employed for the same purpose. The head of the pin discloses the wealth of the wearer. The wife of the Viceroy of Foekin has a pin, the head of which is a large ruby. Pins of this sort are worth immense sums. In this class comes a large number of pins, whose heads are emeralds, pearls, jade pieces, gold balls or figures, and silver designs. In another class the pin terminates in a cluster of some sort, and there seems no limit to the designer in this field. The cluster may be seven jade stars, suspended or supported by fine wires, it may be a group of blue cat's eyes, representing a bunch of grapes, a row of pearls swinging from minute chains, a knot of exquisitely colored tiny porcelain flowers and fruits, turquoises carved into violets, a boutonniere of buttercups in filmy gold leaves, etc. In a third class the shank and head are separate, and this keeps the latter in perpetual motion. In addition to the other styles referred to, the heads are made also of flake jade, cut to represent long leaves and similar shapes, porcelain butterflies, gold and silver moths and dragon flies, little birds in metal, vines, etc. The hairpin in the East, unlike that in the West, is generally silver or gold. It is a thin bar, slightly flattened, waved and corrugated, and usually from six to eight inches long. Its owner bends it according to the style in which she dresses her hair. The gold and silver smiths make special alloys for hairpins. Ordinary pins would break after so many bendings and unbendings as the Chinese pins are subjected to, but the latter last a lifetime. A curious instrument possessed by everyone in China above the extremely poor is the tongue scraper. They may or may not have brushes, but they are sure to have a tongue scraper. This scraper is a ribbon of silver or gold with a ring at one end, by which it is suspended when desired. The cheapest are of plain metal; more expensive ones are engraved, while a few are jeweled at either end. Like hairpins, they are sold by weight, plus a small charge for workmanship. Thumb rings are very common in the East. These are often made of precious metal, ivory, jet, and precious stones, but generally they are of fine jade. The cavity is not cylindrical, but swells out at the base and middle. This enables the owner to wear it lower down, and also prevents it slipping. The jade is usually polished, but may be engraved or carved in intaglio or relief. The refined classes use jade exclusively, and as precious a variety as their purses will permit, but some of the lower classes wear imitations, which are made of glass or porcelain, colored with lead or iron oxide.

Firing the Rivets.

This story comes from Hornellsville, N. Y.: One of the most difficult operations in the repairing or rebuilding of locomotives is the removing of old bolts from the frames of engines. These bolts are originally machine fitted to their places, which alone would make their removal difficult, but, as they are always badly rusted, the process is doubly tedious. The method that has always been in use is to force them by upward blows from heavy hammers, but frequently the drill had to be used before the work could be accomplished. Some time ago a workman in the Erie Railway shops at this place conceived the idea that these bolts could be quickly and effectively removed by the use of a projectile fired from a cannon. The master mechanic resolved to test the idea, and a steel mortar-shaped piece of ordnance was made at the shops for the purpose. It has a two inch bore seven inches deep. This is fitted with a steel projectile the same length of the bore, two or three inches of the upper end being drilled down to a diameter of three-quarters of an inch to act as a punch. The first test of this novel tool in locomotive building was made on Saturday. The mortar was loaded and the drill projectile placed beneath a bolt in an engine frame. At the first discharge the bolt, a particularly obstinate one, was driven from its hold. The entire frame was dispossessed of its numerous bolts by the projectile in a much shorter time than a single bolt was ever taken out by the old method. The success of the ordnance tool will mark an important revolution in the work of locomotive repairing.

In the Matter of Signs.

In the arrangement of signs on the door front of a Hardware store, much depends upon the surrounding conditions. Simplicity is, however, a safe policy to follow, and a large sign sweeping the top front of the door is perhaps as good as any. Let it be handsomely painted in gilt, with a dark background. On the window smaller signs can be placed, but they should be of a very general character, for the run of commodities is continually changing, and if one is too specific he is apt to be pointing in the wrong direction as he continues in business. The name of the proprietor can be placed on the door, and this will conclude about all that is necessary in the way of permanent signs. If the store has a handsome front, do not disfigure it by putting up a cheap sign, or white block letters that will soon chip off. Have the signs in durable colors. In short, simplicity, solidity and elegance should be the basis of all permanent signs.

"Evangeline" Hardware.

A New York tourist who spent a few weeks in Nova Scotia recently tells of a practical joker in that region who for years has been having lots of fun with gullible Americans, says the New York *Advertiser*. The joker's name is Edwards, and he was for years a conductor on the Windsor & Annapolis railroad, which runs through Grand Pre and other historic spots in the "Land of Evangeline." Sentimental New England schoolma'ms have found him a mint of information on the local associations of Longfellow's great work, and many are the "relics" which he has presented to them as special marks of esteem. These include real nails from Evangeline's house—enough of them to put together a summer hotel—keys made by Basil, the blacksmith, but bearing a good many indications of the modern Hardware factory, and a host of similar souvenirs, all of which are being religiously treasured by the delighted recipients.

Recent advices from Mexico indicate a general condition of prosperity in that republic. General business is reported to be very fair. The coffee industry is increasing in all portions of the country. The corn crop in the more southern states will be short, but this will be counterbalanced by abundant crops in other portions of the country, and it is not thought that it will be necessary to import any of this cereal. "There promises to be the greatest influx of investments from the United States that has ever been known."

P. H. Robbins, wholesale and retail dealer in Hardware' iron and steel, coal, glass, flour, groceries, salt, paints, oils, varnishes, brushes, belting, fertilizers, agricultural implements, blankets and robes:

CHESTER DEPOT, Vt., September 6, 1894.

HARDWARE Publishing Co.: Enclosed find currency, one dollar, to extend paid subscription to HARDWARE. I have taken the ——— ——— weekly for more than a quarter of a century, *but can't do without* HARDWARE. Yours,

P. H. ROBBINS.

Some of the English as well as the German cutlers are making razors by the drop forge method. In this way a remarkably cheap razor can be produced, but as the quality of the work in so fine a piece of cutlery has to be considered, the remark of Ruskin that there is "no such thing as cheapness" would seem to apply in this instance.

It is reported from Buffalo, N. Y., that the Stark Tool & Machine Co., have gone into the hands of a receiver. Assets are reported to be $105,000 and liabilities $95,833.

The Old Question of Discounts.

EDITOR HARDWARE: The publication of heavy discounts on some articles in the Hardware line is apparently absurd and in many instances it is actually so. The practice has grown up from one fact, that the contractor in a locality would go to the neighboring retail dealer, and knowing that discounts are given, he insists upon them, and very liberally at that. If the retail dealer has a high list with heavy discounts, his path is apparently a smooth one. There is, however, a growing tendency among manufacturers to name net prices at the outset. It is a more simple mode of trading, saves bookkeeping and clerical hire, and in the long run does away with a feeling that one dealer, in the disparity of discounts, is buying cheaper than another. The giving of such a discount as 90 and 30 per cent. is apparently the abuse of the system.

One objection to the publication of list prices frequently is the expense of a catalogue, the discounts being more simple to obtain from the printer's hands. The English manufacturer, however, often prints lists without expensive cuts, and thus keeps pace with the progress of prices.

The question is many sided; has been debated often; will not be radically changed in the near future; it is only a tendency that can be discerned. ONE OF THE OBSERVERS.

Boston, October 4, 1894.

The "Mary Ann" Furnace.

When Jacob Lesher erected the "Mary Ann" furnace on the headwaters of the Little Lehigh, about 1789, the residents wondered where he would secure his fuel with which to operate the stack. It was not long, however, when the residents realized that they really had a live industry in their midst. Iron was made and it was shipped by team to Philadelphia. Mr. Lesher continued to run the furnace until 1808, when he sold it to his son-in-law, Reuben Trexler, who had charge until 1837, and then transferred it to his son, Horatio. The latter kept the furnace in operation until 1869, when it was abandoned, because of the scarcity of charcoal and the high price of labor. This old landmark is rapidly going to decay. There is still a quantity of cinder which contains a large percentage of iron. Much of the cinder is used on the public highways. It was at this furnace where the first anthracite coal stoves used in Pennsylvania were manufactured by Reuben Trexler. They were called "The Lehigh stoves." The first plates were made in the open sand, about 1820. Subsequently, flasks were introduced. The trade continued until 1857, when the development of foundries resulted in the discontinuance of this branch of industry. The stove had a fine reputation in those days. Wood stoves were also made, and a number are still to be seen at the homes of old farmers in this section of the country.—*Reading (Pa.) Eagle.*

Manufacturers vs. Prison Labor.

A New Jersey manufacturer who was talking with a representative of HARDWARE some days since upon the subject of advertising, compressed the feelings of a great many into a little space when he said: "At present the severe competition from prison labor forces us to curtail our expenses where possible. When this country fosters prison labor at forty cents per day, furnishes the buildings for political contractors, and expects outside manufacturers to pay labor from $2 to $3 per day, furnish our own plant, pay (in shape of taxes) to meet deficiencies when these contractors conspire to swindle the State (see records of such deals) and meet such competition, it it is but natural that we should close our purses when under ordinary circumstances we would not hesitate to keep them open."

Paper Horseshoes.

"When paper horseshoes were first introduced into the cavalry service of the German Army a few years ago, they excited a good deal of interest," said Jacob Minotz, of Berlin. "Several cavalry horses were first shod with the paper shoes and the effect observed. It was found that not only did the lightness and elasticity of the shoe help the horse on the march, making it possible for him to travel faster and farther without fatigue than horses shod with iron, but that the paper shoe had the property of being unaffected by water and other liquids. These new sheets of paper, pressed closely, one above another, are rendered impervious to moisture by the application of oil of turpentine. The sheets are glued together by a sort of a paste composed of turpentine, whiting, gum and linseed oil and then submitted to a powerful hydraulic pressure. Paper horseshoes are also made by grinding up the paper into a mass, combining it with turpentine, sand, gum, litharge and certain other substances, pressing it and afterward drying it. But these shoes are less tough and elastic than those made of thin sheets of paper laid one upon another. These shoes are fastened to the horse's feet either by means of nails or with a kind of glue made of coal tar and caoutchouc."—*St. Louis Globe Democrat.*

We have been permitted, through the courtesy of Mr. Fairbien, of the Charles Parker Co., Meriden, Conn., to examine some advance sheets of the Paddock-Hawley Iron Co.'s (St. Louis, Mo.) new catalogue. This will be issued at a cost of over $10,000, their line of iron, steel, nails, carriage and heavy Hardware being one of the most complete in the country. Their trade covers the entire West, Southwest and South, and extends into Mexico and South America. Their new building is at the corner of Tenth and Spruce Streets, upon a lot 125x160 feet, with railroad track connections in the rear; with seven floors, covering a space over 130,000 square feet, is one of the finest in St. Louis.

Zinc is being extracted in Sweden by a new process, after the electrolytic manner, and it is claimed for it that very poor ores, which have been considered worthless, are made equal to the best. As in copper, it is reasonable to presume that the electrolytic process will do as much for zinc. Pure metallic zinc has not been produced in Sweden for thirty years.

The Wright Shovel Co., Anderson, Ind., have commenced the erection of a factory for the manufacture of heavy shovels. "The company will employ 125 skilled men at the start and announce that 200 will be employed by the close of the year. The deal was closed recently and was a great surprise to many. Not a dollar was paid to the company as a subsidy."

The pneumatic tire people are beginning to make contracts for the next season. So far the outlook is favorable, the amount at this time being fully equal to that of preceding years. The whole bicycle business has been one of prosperity during the past year for the retailer, the only trouble being in the growing competition among manufacturers.

A corn razor is about eight inches long from the end of the blade to the end of the handle. Apparently in nowise does it differ from the razors used in shaving, except that it is smaller than those usually found in barber shops, but to identify them they have the words "corn razor" engraved on the blade.

Traveling men introducing new wares would do well to take pains to explain their use and working to clerks in Hardware stores. These subordinates are more apt to be thrown in contact with the buyer, and a description from as near first hands as practicable, has certainly its advantages.

It is understood that a large factory for the manufacture of smokeless powder will be built near Reading, Pa., of which a prominent army officer will have the management. Another factory is to be built in California.

Paper mills are getting large orders from cartridge manufacturers. This paper has heretofore been principally made in the East, but now Western mills are getting their share of the business.

The Columbia Rubber Works, New York, report a growing demand for the Palmer tire, having placed so far some good sized contracts for next season.

New Goods in the Market.

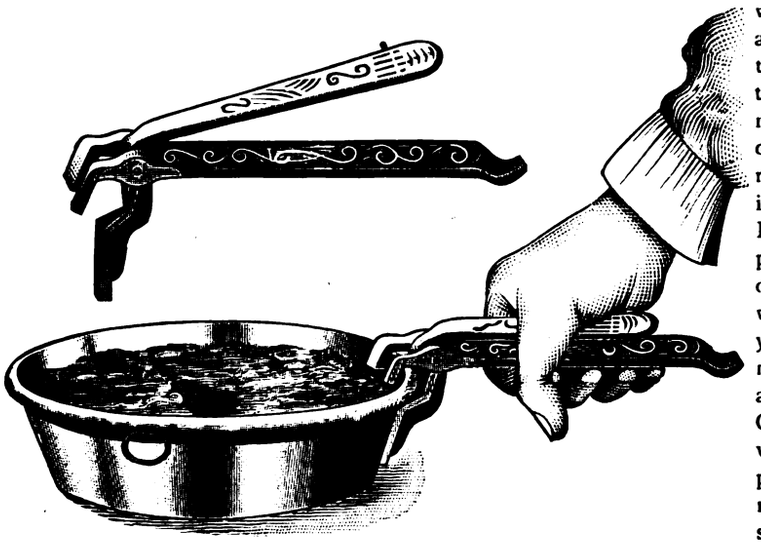
If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Hardwood Horse Bucket.



The accompanying cut illustrates the Hardwood Horse Bucket manufactured by the Buckeye Churn Co., Sidney, Ohio.

This bucket is manufactured from ash and oak. The stave is ⅜ of an inch thick, with three ⅞ inch hoops, and a ¼ inch iron bail which is hooked into an iron clip with two rivets, one of which goes through the upper hoop. This bucket has a flush bottom, so that one can stand a horse's feet right in it without danger of breaking the bottom. This is a very desirable bucket for use around stables and for mortar buckets. It holds about 3½ gallons.

Columbia Lifter.

The Columbia Lifter is manufactured by A. C. Williams, maker of sad irons and Hardware and house-furnishing specialties, Ravenna, Ohio. It is intended for the removal from the oven of pans of beans, puddings, roasts, etc., without burning

the hands, or the use of cloths; and it can also be used for a stove lid lifter. "It is novel, light, durable, attractive in appearance, and cheap." Price list: No. 80, finely finished and nickel-plated all over, per pair, 25 cents; No. 85, finely finished and japanned, per pair, 20 cents. Discounts to the trade. Packed 12 pairs in paper box. Shipped in cases of 12 dozen pairs.

Stretcher and Quilting Frame.

The accompanying cut illustrates Steinmann's Silver Hook Lace Curtain Stretcher and Quilting Frame. The advantages claimed by the manufacturer are: "The frame is seven feet

wide by 14 feet long when set up for use, as in the cut. The long pieces are made of two seven feet pieces, and connected with an iron sleeve which can be adjusted by a child in an instant. Folding stretchers put together with hinges are liable to break. By using one section of the long sides it can be used for stretching lace bed-spreads, pillow-shams, tidies, for stitching purposes and for quilting. The frame is held together by square metal corners fitted with a lever clamp, which when set will make the stretcher perfectly rigid. It is adjustable to any length or width in an instant. It is the only stretcher provided with German silver hooks, which are a positive preventive against rust spots. The hooks are removable and also adjustable to match large or small scallops. One set of hooks will last a lifetime. When folded it requires very little space to store it away." The trade will be supplied by Albert J. Eschrich, No. 3608 Gravois Avenue, St. Louis, Mo., who will furnish prices on application.

Two New Washers.

In Fig. 1 is shown Bolgiano's One Minute Dish Washer, manufactured by the Bolgiano Mfg. Co., Baltimore, Md. It "consists of a box, two feet long, one foot wide and one foot deep, with a hinged lid. Inside, near the bottom, is placed a skeleton tray in which to rest the dishes. On the right is a propeller wheel that is operated by the hand, fast or slow, just as desired, and the dishes can sometimes be washed in half a minute. Place the cups in first, then the plates and then the saucers, each in a groove, and fill with hot water up to the centre of the wheel. Close the lid and turn the handle, and if turned rapidly the dishes can be washed in half a minute. Then open the screw cap at the end of the machine and allow the water to drain off, after which, open the lid and let them stand a few moments and the dishes will then be ready to put away in the cupboard. It is plain and simple, nothing to get out of order, and will last many years." In Fig 2 may be seen Bolgiano's new Steam Clothes Washer, which is being placed upon the market by the same company. It is described as working automatically, "saves all the old fashioned scrubbing, as it draws the dirt out of the clothes through a powerful suction. Place it in the bottom of the boiler; put an iron or half brick on top of it to keep it in place; fill with water an inch below

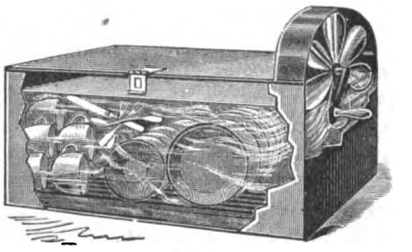


FIG. 1.

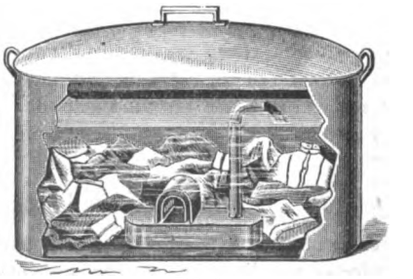

FIG. 2.

Digitized by Google

top of the spout, put in the clothes and let them boil for ten minutes after the water comes to a boil. When finished boiling the clothes will be washed."

Remington Hammerless Double-Barrel Shotgun.

The Remington Arms Co., Nos. 313 and 315 Broadway, New York, are placing upon the market the new Remington Hammerless Double-Barrel Shotgun shown in Fig. 1. It has an automatic ejector and non-automatic ejector; a sectional view of automatic ejector model being shown in Fig. 2. It is needless to say that any weapon stamped "Remington" is sure to be first-class in all respects, and sportsmen will find that in this case the reputation of the company has been fully maintained. All grades of this shotgun are made with Damascus barrels, choke-bore, English walnut stock, half pistol grip, rubber butt-plate, checkered fore-end, case hardened frame and mountings, automatic safety, Purdy fore-end snap, triple bolt, top snap, extension rib with bite, flat matted rib. Ejector guns have independent automatic shell ejector. In further description the following figures will be of interest:

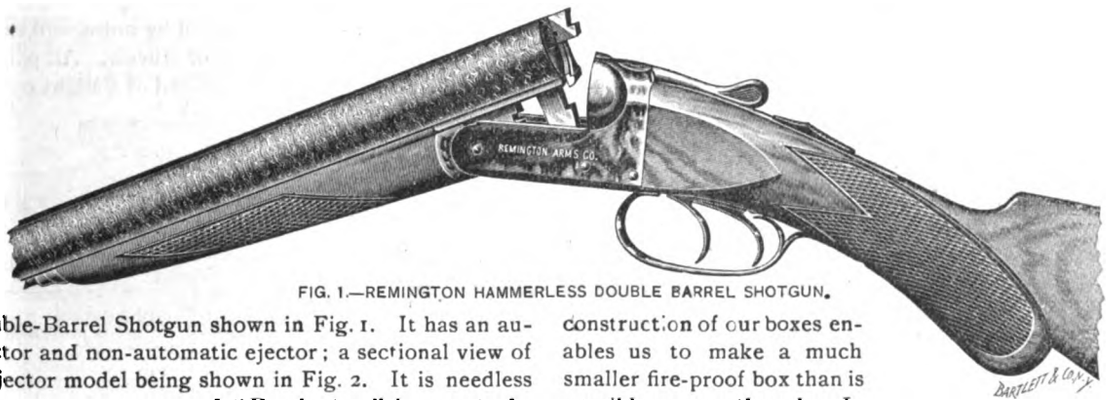

FIG. 1.—REMINGTON HAMMERLESS DOUBLE BARREL SHOTGUN.

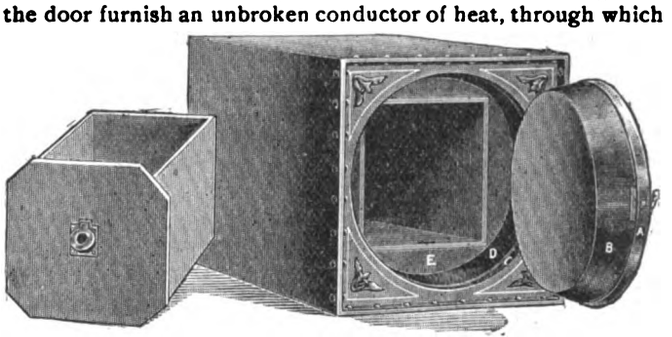
12 gauge, 28, 30, 32 inch; 6¾ to 8¾ pounds; Drop, 2¼ to 3⅛ inch.
10 " 30, 32 " 8¼ to 10 " " 2¼ to 3⅛ "

	AUTOMATIC EJECTOR.	Retail Price.
Grade A.E.—	Two-stripe Damascus barrels, plain finish, English walnut stock	$67.50
" B.E.—	Fine three-stripe Damascus barrels, line engraving, fine English walnut stock	82 50
" C.E.—	Finer Damascus barrels, scroll engraving, selected Eng. walnut stock and finer checkering, silver name-plate	112.50
" D.E.—	Very fine Damascus bbls., fine scroll engrav'g, fine English walnut stock and checkering, silver name-plate	172.50
" E.E.—	Finest Damascus bbls., finest quality bird and game engv. best Eng. walnut stock, checkered sides, gold name-plate	247.50



Hollow rib furnished on grades B.E., C.E., D.E., E,E., to order.

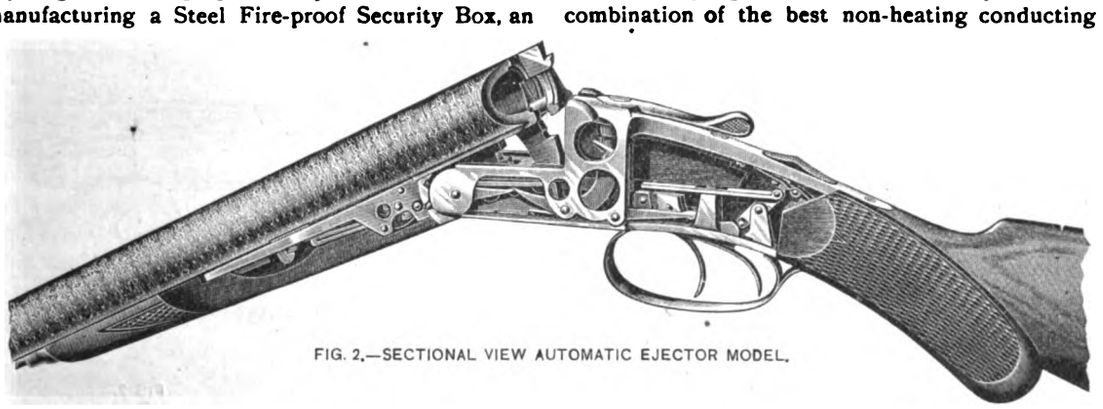
	NON-AUTOMATIC EJECTOR.	
Grade A.—	Two-stripe Damascus barrels, plain finish, English walnut stock	$45.00
" B.—	Fine three-stripe Damascus barrels, line engraving, fine English walnut stock	60.00
" C.—	Finer Damascus barrels, scroll engraving, selected English walnut stock and finer checkering, silver name-plate	90.00
" D.—	Very fine Damascus barrels, fine scroll engraving, fine English walnut stock and checkering, silver name-plate	150.00
" E.—	Finest Damascus bbls., finest quality bird and game engvg., best Eng walnut stock, checkered sides, gold name-plate	225.00

In this connection we may say that the Remington Co. are advising the trade that they are now able to execute sample orders for grades "A. E.," "B. E." and "C. E.," and "A.," "B." and "C." in 12 gauge light weight guns, and that they will accept orders for other grades in both 10 and 12 gauge guns, for execution in a few weeks.

Steel Security Box.

The Sidway Mfg. Co., Nos. 32-34 South Jefferson Street, Chicago, are manufacturing a Steel Fire-proof Security Box, an illustration of which is here shown. In describing the same, they say: "Safes, or other receptacles for protecting valuables, documents, jewelry, etc., from destruction by fire, are very seldom found in private residences, on account of their cost, size and weight, being expensive, not easily concealed and very difficult to move, besides many homes are not built strong enough to support so much weight at the place where their location would be the most convenient. These objections we have, after something over a year's experimenting, succeeded in overcoming, and have produced a practicable and absolutely fire-proof box of a convenient size and shape, which can be sold at a moderate price. The entirely new principle used in the construction of our boxes enables us to make a much smaller fire-proof box than is possible on any other plan. In all safes now constructed the door frame is made entirely of metal and connects the outer with the inner shell of the safe, the front, edges and back of the door are also of metal, which form, when the door is closed, a continuous metallic connection between the outside and inside, so that no matter how perfect the insulation may be at all other points, the door frame and edges of the door furnish an unbroken conductor of heat, through which it is carried from the outside to the extreme inside of the safe. Its value, therefore, as a protection from fire must be determined not by the thickness of the walls or amount of non-conducting material used, but by the length of time that will be required for the heat to travel from the outside to the inside along the edges of the door and frame. In the construction of our boxes the metal edge of the door and frame extend in only a short distance, and the intervening space between the edges and inner box being filled with fireproofing, there is nothing through which the heat can pass from the outside tothe inside of the box, as shown in illustration. They are thoroughly well made, of high grade, cold rolled and pickled steel, and by a combination of the best non-heating conducting substances, with a method of construction by which there is no metallic connection between the outer steel frame and the inner case we have produced a repository for documents and other valuable articles which may be relied upon to resist the action of fire. These boxes are handsomely japanned and striped, have nickel trimmings, and are provided with either a four tumbler

A, METAL DOOR FRAME —B, FIREPROOF BACK.—C, METAL DOOR JAMB. D, INNER FIREPROOF RIM —E, FIREPROOFING AROUND INNER CASE.



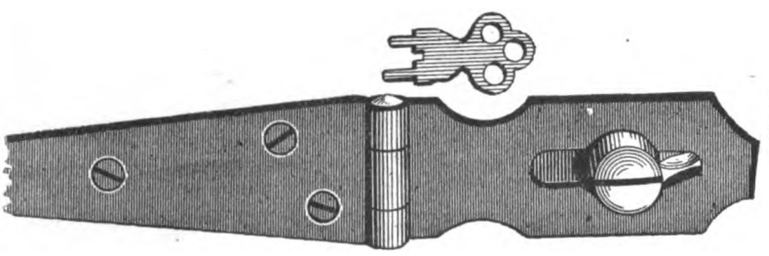


FIG. 2.—SECTIONAL VIEW AUTOMATIC EJECTOR MODEL.

Digitized by Google

lock with two small flat keys, or combination lock, as preferred. Most people prefer keys, because of their liability to forget the combination." The dimensions are as follows: No. 2, Outside: Length, 17¼ inches; width, 11 inches; height, 11 inches. Inside: Length, 10¾ inches; width, 5½ inches; height, 6 inches. Weight, 55 pounds. Price with key lock, $15. Price with combination lock, $17.

Eureka Hasp and Lock.

This Hasp and Lock is manufactured by the C. C. Leader Mfg. Co., Shamokin, Pa. In speaking of it, they say that it

" is a combination of hasp and lock; is very simple in its construction, and not liable to get out of order. It does away with the use of padlock and staple entirely. While it can be used wherever a padlock can be, yet there are many uses for it where a padlock would be unsightly to the eye, and cumbersome. Unlike a padlock, it cannot be mislaid or carried off. It is neat in appearance and durable. For barns, stables, cellar doors, tool chests, butter and egg cases, closet doors, refrigerators, etc., it is decidedly the thing. The Lock is made of brass and is finished both nickel-plated and japanned." Price list to the trade: Japanned, 3 inch, $4.50; 4½ inch, $4.60; 6 inch, $4.75; 8 inch, $4.90; 10 inch, $5.10. Nickel-plated, 3 inch, $7; 4½ inch, $7.10; 6 inch, $7.25; 8 inch, $7.45; 10 inch, $7.60. Discount.

"Perfect" Roller Chafe Iron.

The Bellamy Co., No. 243 Pearl Street, New York, are placing upon the market the "Perfect" Roller Chafe Iron here shown; in Fig. 1 the article itself, and in Fig. 2 the sectional parts thereof. The feature of construction to which especial attention is called is in the cone-shaped roller working on a cone-shaped bearing held in place by a spiral spring, so as to admit of all wear being taken up automatically, which effectually prevents rattling. "The bolt which holds the roller in

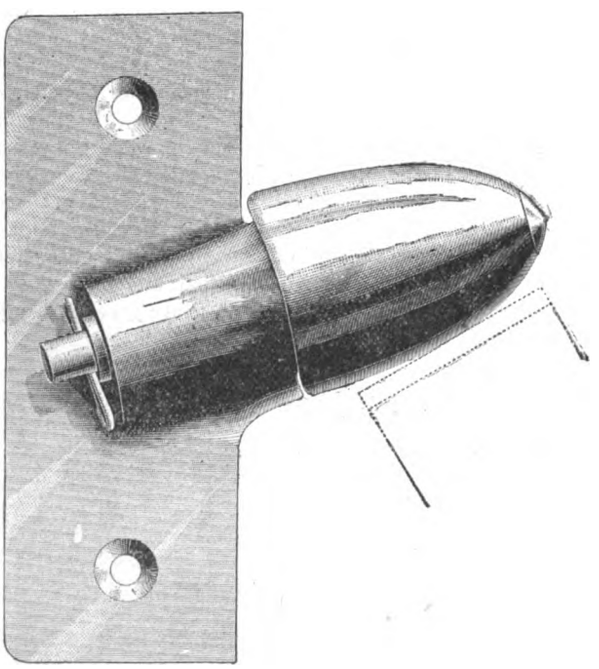

FIG. 1.

position is secured at the lower end by a spring key (Fig. 1.) The cone is babbits lined (Fig. 2) and is supplied with lubricant through a hole connecting with the lubricant chamber which surrounds the bolt, indicated in the sectional cut by the darker shading. The chamber is filled at the factory with paste lubricant of such consistency as to constantly supply the necessary amount of lubrication. The position in which the tire of the wheel comes in contact with the roller is shown by dotted lines Fig. 1, thus preventing the tire being worn round on the edges." The makers add that "the pressure is always on the centre of the tire, causing the roller to revolve; the pressure is direct through the spoke to the hub; there can be no damage to the paint or the wheels by scratching or straining; the working of the roller is unaccompanied by noise, and the use of the device results in a great saving of wheels. All parts are interchangeable, and they can be replaced at a slight cost. The chafe iron

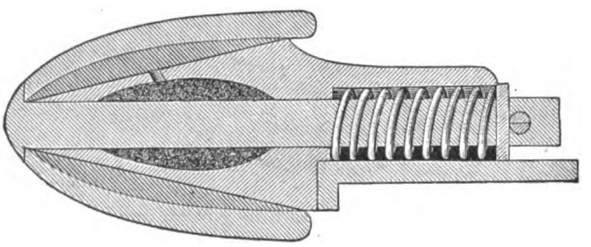

FIG. 2.

is made in two sizes—No. 1 for buggies and No. 2 for surreys and light business wagons."

A Trick Knife.

The Trick Knife here shown is offered to the trade by C. J. Healy, No. 121 Chambers Street, New York. In Fig. 1 may be seen the knife when held for opening; in Fig. 2 when closing. It has one blade, a genuine strong handle, and is brass lined. The trick consists in the method of operating and closing. A hole

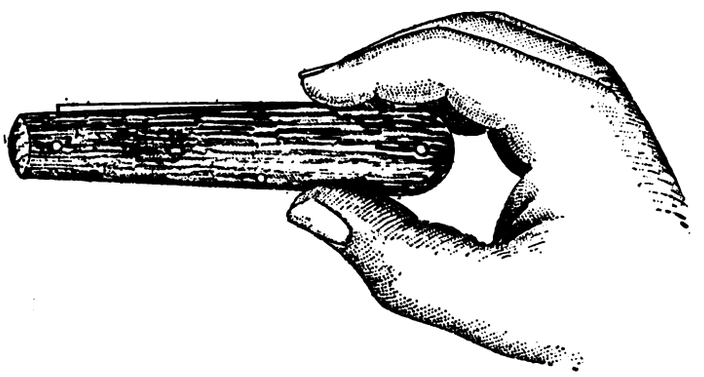

FIG. 1.

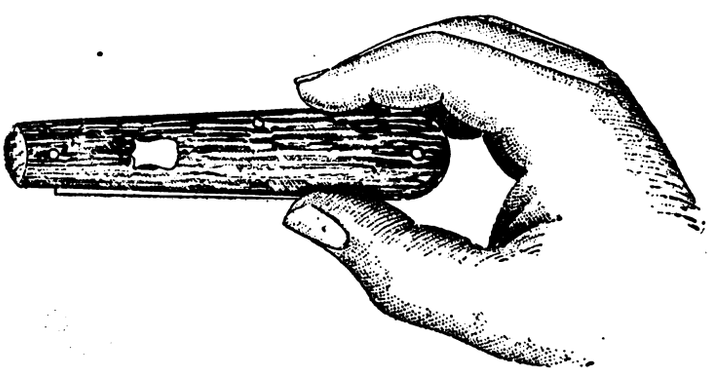
is in the shoulder of the blade, and into this a lug drops when the knife is held in a certain position, and drops out when the position is reversed. To open, the knife is held as in Fig. 1; the shield down, and the forefinger pressing against the blade. You then strike the free end of the knife lightly against some object; this jars the lug out of the hole in the blade, and back to a hole in the handle. The finger is removed as the knife is struck; the blade flies open of its own accord. In closing



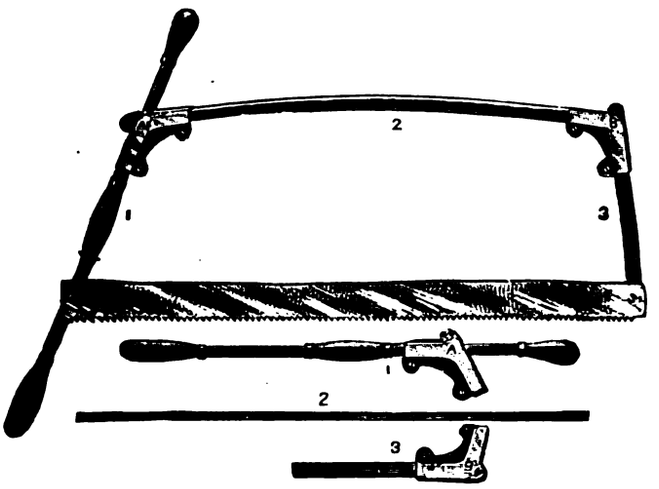


FIG. 2.

the knife it is held as in Fig. 2, with the shield up. The blade is then pushed home with the forefinger, when the end of the knife is struck, jarring the lug back into the hole in the blade, holding it securely closed. It is impossible to open or close the blade in the ordinary manner. Samples will be sent, prepaid, by mail at $4 per dozen.

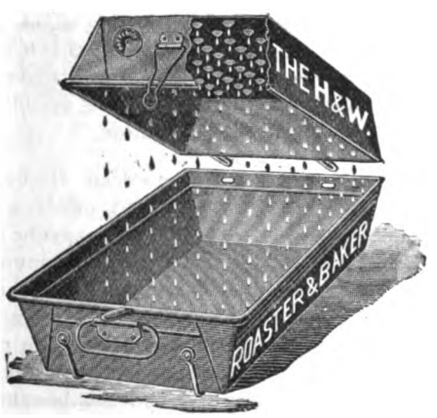
Jacobs' Adjustable Steel Buck-Saw Frame.



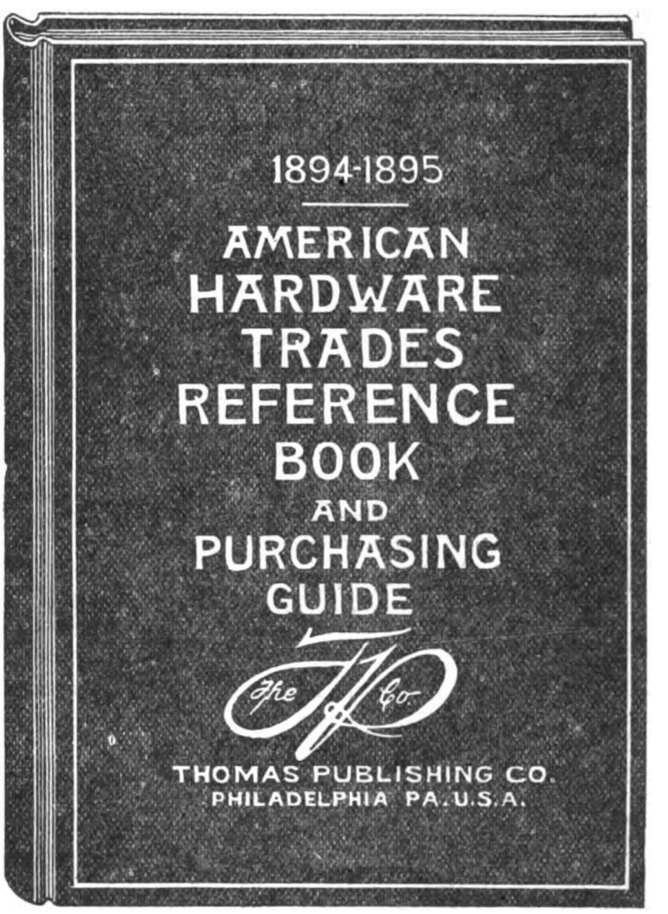
C. E. Jennings & Co., New York, are placing upon the market the Jacobs' Adjustable Steel Buck-Saw Frame, which is herewith illustrated, and which possesses many good points. "This frame is made of the best spring steel, joined together

by couplings, as shown by letters A and B, and adjustable to any length saw, also to different depths cut, and is also easily detached so that it can be packed in an ordinary tool chest. As it is made of steel, it is not affected by the weather, and is therefore one of great durability. In its proportions great pains have been taken to make it perfectly balanced, thereby giving the best results with correspondingly little effort."

"H. & W." Self-Basting Pans.

The Hill, Whitney Co., Boston, Mass., are manufacturing the "H. & W." Self-Basting Baking and Roasting Pans, an illustration of which is here shown. They describe it as "the only pan with indentations in the top, making self-basting positive." They are made of planished steel, which is described as "similar in appearance to Russia iron, but much more durable." In further description they say: "In presenting this new and improved Roasting and Baking Pan to the public, we do so under the full assurance that science has fully demonstrated, and the public accepted, the theory that anything cooked in a utensil where the steam is kept in as much as possible, is much sweeter and more nutritious than when cooked in any other way. The Self-Basting 'H. & W.' also combines all the advantages of other pans; its simplicity of construction enables the

user to adjust and handle it readily; very durable and easily cleaned. The wire shoes on the bottom which prevent burning of contents and allows a free circulation of heat in the oven under the pan, together with an improved catch, recently added, have won for the 'H. & W.' Pan a national reputation from dealers and users."



Perfection Nasal Expander.

A little article which will interest not only athletes, bicycle racers, etc., but also all who are afflicted with a difficulty in breathing, is being placed upon the market by the Nasal Expander Co., Havemeyer Building, New York. It is called the Perfection Nasal Expander, and the method of its use will be seen from the accompanying illustration. The spring in the centre, when caught, holds the Expander in place, while the side pieces press against the nostrils and hold them open, giving the air passages free play. The manufacturers declare that the Expander "is easily adjusted and quite invisible; the tension of the springs can be increased or lessened by a slight bending of the slender outer bands; the metals used are silver and gold, thus making corrosion of the Expander and erosion of the nostrils impossible. Three grades are manufactured: all gold, gold springs with silver disks, and all silver Expanders." They further say: "The Expander will prevent any possible collapse (sinking in) of the nostrils under all circumstances. It provides an exact scientific method of massage whereby weak nasal muscles are gently stretched and thus strengthened. There is no possibility of deformity resulting from its use. It will be found invaluable to athletes, speakers and vocalists 'in practice,' if not during 'active engagement.' To Cyclists: In riding the wheel, the familiar stoop is an impediment to easy respiration through the nostrils. The Expander is admirably adapted to meet the difficulty." The company will be pleased to send an explanatory catalogue upon application.

A Valuable Hardware Reference Book.

A long-felt want to the entire Hardware trade, is indeed well filled by the "American Trades Reference Book and Purchasing Guide," just issued by the Thomas Publishing Co., Philadelphia, Pa. This book gives in a condensed form, arranged alphabetically for instant reference, all the manufacturers in the United States and Canada, of all articles handled by Hardware, stove and implement dealers. The relative size of each manufacturer is shown. The work is minutely classified, showing not only the manufacturers of every article and every kind

of article, but also the special brands and special names o articles, every manufacturer being given an unlimited number of headings free. The price is so low that no well equipped establishment should be without it; and we can personally say in this connection, that the work is in constant use in the office of HARDWARE, and has proved a very mine for information that could not be elsewhere obtained. A great amount of money and labor must have been expended in getting this valuable material together. Further information as to the work may be found in detail upon page 58 of this issue.

The "Easy" Bolt Clippers.

H. K. Porter, No. 66 Beverly Street, Boston, Mass., is successfully manufacturing a line of goods known as the "Easy" Bolt Clipper. Two forms thereof are illustrated in this connection, the No. 1 in Fig. 1, and the No. 2 in Fig. 2. It is stated by the manufacturers as evidence of the success achieved by these goods, that twenty-nine thousand of them had been sold prior to January 1, 1894, and that they were sent to all parts of the world. In description, he says: "It is so well known that it is unnecessary to describe it at much length; but previous to the introduction of the 'New Easy' it was the only open-shear bolt clipper ever invented having practical adjustment. Each handle has a short arm called the adjusting section hinged to it on the outside, the other ends of the arms being hinged to the jaws. These arms are held against the handles by a bolt passing through both, and they are really a part of the handles. Between the short arms and the main part of the handles, can

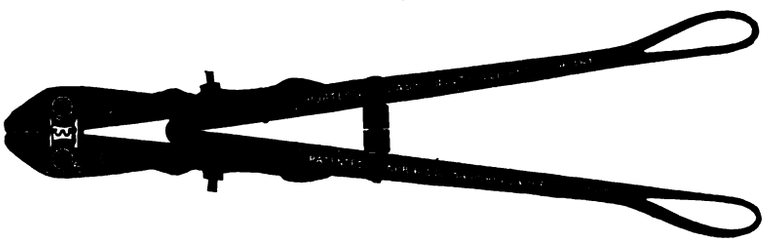

FIG. 1.—No 1, "EASY" BOLT CLIPPER.

be put thin iron shims, which are furnished with each clipper; this makes the handles wider, and of course moves the cutting edges of the jaws nearer together. A bolt clipper is of no use, unless it has an adjustment to keep the cutting edges close to each other; and if it has only a little adjustment, it will last only a short time, when it will be necessary to get a new pair of jaws. The 'Easy' Clipper is sufficient to wear 3-16ths of an inch off from the edge of each jaw, which will last the whole life of the clipper.

"The jaws of the 'Easy' Clipper work between two steel straps, and upon two steel bolts, which pass through both straps and jaws. These bolts have flat heads which are sunk into the bottom strap. Two holes are drilled through the strap partly in the sides of the bolt-heads, and in each of these holes is put a steel rivet, after which the bolts cannot turn. The lock nuts have teeth around their bases, and the lock plate has toothed holes which fit the lock nuts. The equalizing gears hold the lock plate in place. It is plain that if the steel rivets in the bottom strap keep the bolts from turning, and the lock plate keeps the lock nuts from turning, that it is impossible for the

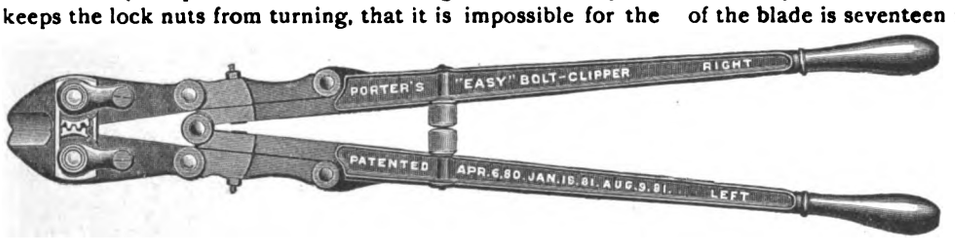

FIG. 2.—No. 2, "EASY" BOLT CLIPPER.

jaws to get too tight between the straps, or to get too loose except by wear. The stops between the handles are of rubber. They are secured in such a way that they can give when the handles are pressed together, and they prevent any jar on the hands even in cutting off large bolts.

'The 'Easy Bolt' Clippers are sold by most of the dealers in Hardware and tools in the United States and Canada, and large numbers have been exported to England, France, Germany, Australia and other foreign countries. Dealers who do not carry them in stock will generally order them when their customers want them to; but when they will not, or when they offer any imitation, I will thank those who want my tools to write me, and I will either let them know where they can be had, or sell them direct."

W. F. Main, treasurer of the Payson Mfg. Co., Chicago, Ill., was in the city last week and visited Boston in the interest of his company.

Great Activity at Fremont, Ohio.

Information as follows comes from the already busy little city of Fremont, Ohio:

Fremont Knife Co., incorporated, with capital stock of $5000, for the purpose of manufacturing and selling knives, and also to act as agents for other parties, in the manufacture and sale of knives of all kinds. L. H. Cress, Russ J. Christy, C. H. Myers, N. C. Sherwood and R. H. Rice, incorporators.

Fremont Shear Co., incorporated, with capital stock of $5000, by L. H. Cress, Russ J. Christy, Charles Thompson, N. C. Sherwood, R. H. Rice, for manufacture and sale of all kinds of shears, scissors, tinners' snips, pruning shears, corrugated shears for metal roofing, and foot and power shears for squaring metal sheets, etc.

Fremont Cutlery Co., incorporated by L. H. Cress, Russ J. Christy, C. H. Myers, N. C. Sherwood, R. H. Rice. Capital stock, $5000, for manufacturing and selling edge tools of every description, and of acting as agents of other manufacturers for the sale of edge tools and performing all things incident thereto.

Fremont Mfg. Co., incorporated, for the purpose of manufacturing and selling dies, presses, and special grinding machinery for the manufacture of knives, shears, scissors and other manufactures in the same line of business. Capital stock, $5000. Incorporated by L. H. Cress, Russ J. Christy, C. H. Myers, N. C. Sherwood and R. H. Rice.

Fremont Bread Knife Co., incorporated, with capital stock of $5000, by L. H. Cress, Russ J. Christy, C. H. Myers, N. C. Sherwood and R. H. Rice, for the purpose of manufacturing and selling knives, specially designed for bread, cakes and pastry; also knives of peculiar form and edge for carving meats.

Christy Bread Slicer.

The Christy Knife Co., Fremont, Ohio, for whom David Eastman, No. 64 Reade Street, New York, is agent, have had much success in placing their No. 10 Christy Patent Bread Slicer upon the market. In bread slicers the cutting blade naturally has to be very thin, so much so that it is apt to bend or cockle under pressure. To obviate this the knife has connected with it a steel frame, placed transversely with it. This is so arranged that the knife can be readily separated, if it, for instance, became broken. The object is to combine the delicate blade of the Christy Knife with a frame that will give it stability, similar to the saw for cutting wood. The length of the blade is seventeen inches, and to say that it will cut vegetables or bread without crumbs, shreds or waste, would be an act of supererogation.

An American Hardware journal (HARDWARE) offers a year's subscription free to anyone who can cite an instance of meanness in customers to equal that of the man who bought a mouse trap, took it home, caught the only mouse in his house and then wanted the dealer to take the trap back. We recall a case that came under our notice some time ago where a woman asked to have a toothbrush that she had bought six months before exchanged because it did not fit her mouth, and our contemporary mentions another woman who wanted a key to unlock her trunk. She was handed two, and left, saying she would return in half an hour to pay for the keys or return them. She never appeared again.—*Hardwareman* (*Englana*).

"Downing's United States Customs Tariff" is the title of a book of over five hundred pages, just issued by R. T. Downing & Co., New York. It is a full exposition of the new tariff, and contains not only a full copy of the tariff of 1894, but also of the customs administrative act of 1890. The book is arranged alphabetically, and contains over twenty thousand articles under their proper trade names, with the proper rate of duty, and a reference to all decisions by the courts and appraisers. The price is $1.

E. W. Bliss Co.'s Friction Clutches.

The E. W. Bliss Co., No. 18 Adams Street, Brooklyn, N. Y., have the following to say concerning their Friction Clutches' illustrated views of which we are pleased to show in this connection:

We have been users for some time past of a large number of Friction Clutches, nearly every geared machine built by us being operated by one. Until recently we have purchased these clutches in the open market, but we became convinced that none offered for sale were as good as could be made, and we determined to procure something better than we could buy. Investigation has convinced us that the Clutch we now offer is far better than any other to be had, and, in fact, is as near perfection as is possible for any such mechanism to attain. We have, therefore, procured the patent rights of this clutch, and, having established a special plant for the manufacture of Clutch Pulleys, we offer them to the public with the confidence that they will meet with wide-spread approval. Our elaborate system of special appliances insure all parts of the mechanism to be interchangeable, and of the highest class of workmanship.

The special features of excellence which we claim for this Clutch are:—

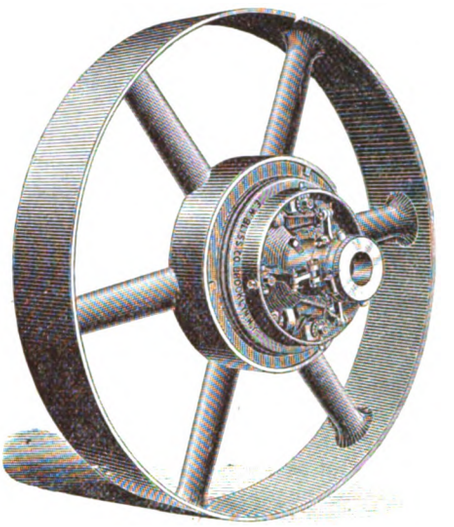
1.—A friction disc flexibly connected to the pulley against the sides of which the clutch members grip. Therefore, if the

pulley wears out of true on the shaft, no difference results in the operation of the clutch, no undue strains are brought on any of the parts, and no adjustments are necessary to compensate for this wear.

2.—There are only two clutch members, one keyed rigidly to the shaft to which the levers are attached, and the other movable. This makes the adjusting of the clutch a very simple matter.

3.—The levers are so balanced that at any speed at which the clutch is run the centrifugal force has no tendency to throw the clutch in or out of operation. This is a very important point, and one not found in the majority of clutches in the market.

4.—The clutch is constructed with very few parts, and is so put together that it cannot get out of order.



5.—Its clutching members are circular and concentric with the shaft, the only projecting parts being the levers, so that it not only presents a pleasing appearance when revolving on the shaft, but is in accurate balance, and may be run with safety at any reasonable speed.

6.—It is very compact, and occupies small space on the shaft.

7.—It is constructed in the best possible manner, with all parts interchangeable.

8.—We have a system of bushings for pulleys so arranged that if on account of long continued use, or where a poor quality of lubricant is used, the bore becomes worn, the bush can be returned to us and exchanged for one with a new lining, at small expense.

9.—The horse-power which the various sizes of clutches will transmit is obtained from actual test by means of a dynamometer especially constructed for the purpose, and we guarantee that the clutch attached to any pulley will transmit more power than can be transmitted by a double belt the full width of the pulley.

The list we furnish covers the sizes of pulleys ordinarily required, but we solicit correspondence, and will promptly submit estimates for special Clutch Pulleys not listed. In adding this new line to our business, we shall endeavor to merit the confidence which our patrons have heretofore placed in us, and wish to assure them and others that their commands and inquiries shall have our prompt and careful attention.

Such dealers as are interested in cuspidores, will find it worth their while to examine the card of the Cuspidore Mfg. Co., No. 30 Ward Street, Newark, N. J., upon page 49 of this issue. The company are the sole owners of "Walton's" patent adjustable bowl cuspidores, and claim to be "the only business house in the United States devoted exclusively to the manufacture of cuspidores. Made in cast brass, cast gray and malleable iron, japanned in all colors and fancy striped spun brass and nickel plated, or in silver to order." The company are in a position to interest any dealer in their line, and will be glad to send prices, etc., upon application.

E. T. Barnum, Detroit, Mich., was recently awarded the contract for a large fountain for the Court House Square at Coshocton, Ohio. Mr. Barnum is the well-known manufacturer of wire and iron work, and he will be glad to correspond with anyone contemplating purchasing fountains, statuary, vases, iron chairs, settees or any of the following goods of which he issues special catalogues: wire and iron fences, bank and office railings, stable fittings, weather vanes, roof cresting, steel jail cells, wire cloth, etc.

Charles Daly, of Schoverling, Daly & Gales, New York, sailed on the *Campania* some days since, for Europe. He will be gone some six weeks, his tour being principally one of business, largely connected with a new line of bicycle lamps of Powell & Hanmer, for whom his firm are agents in America.

The Central Stamping Co., No. 25 Cliff Street, New York, are, we are informed, about to erect a five-story brick tinware factory, 75 by 45 feet, to cost $20,000.

The Latest Catalogues.

The Van Wagoner & Williams Hardware Co., Cleveland, Ohio, and No. 14 Warren Street, New York, have published a well illustrated, neatly printed catalogue in octavo of sixty-eight pages, describing a large variety of their manufactures many of which are new to the trade.

One of the new features is the Oxford Spring Hinge with blanks, the spring being placed at the top and the blank at the bottom of the door. These are japanned and bronze-plated with ball tips, and of real bronze or polished brass with ball and oval tips. These are made in several finishes, such as dark copper, oxidized copper, old copper, Boston finish and Bower-Barffed iron.

In the Crown Spring Hinges, which are double-acting for screen doors, a new principle is introduced, that of locking down below.

The Gem Steel Wire Coat and Hat Hooks are made of double wire, instead of single as heretofore. The yielding base with gimlet screw points is the feature of these hooks. In the ceiling hooks the wires run parallel at the bottom instead of single as heretofore.

The Dome Sad-Iron Heaters are new, the feature being that the heat comes in direct contact with the surface of the irons.

The Excelsior and Gem Stove Pipe Dampers are also new. The Carpenters' Pincers are new in pattern.

A large variety of goods of the Trenton Vise & Tool Works, of Trenton, N. J., to which the Van Wagoner & Williams people have succeeded in business, are also described.

In the back part of the book is a condensed price list of spring hinges, giving the prices of numbers, which reach into the thousands.

William T. Wood & Co., Arlington, Mass., manufacturers of ice tools, for whom Joseph A. Bogardus, No. 167 Chambers Street, New York City, is sole agent, have issued their usual annual catalogue, a well illustrated octavo of forty-eight pages, which cannot otherwise than prove to be interesting to the trade. The company have a reputation for making tools of the highest grade, and in this respect little can be said regarding improvements in their wares over last year. It is well understood now to the ice harvester that it is of the utmost importance he possesses the most perfect working tools he can buy. None but the very best are economical. The cutting season is short, the weather is cold, the men are hurried, and an unnecessary delay on account of unmanageable or imperfect tools, is both aggravating and expensive. A good tool pays for itself a number of times over; a poor tool is most expensive. The Arlington, Mass., people claim to be the oldest ice tool manufacturers in the United States, make nothing else, are located in the midst of extensive ice cutting companies, use no inferior material, and add to these claims that they "make the best in the market and sell at the lowest price the best can be sold."

Schoverling, Daly & Gales, No. 302 Broadway and No. 84 Duane Street, New York, have issued a semi-annual catalogue of 126 pages, covering their lines of goods for the fall trade. They call it "Catalogue 94 B." It will be sent only to legitimate dealers in sporting goods. Among the many lines which it describes, the following can be named: Guns, rifles, reloading tools, revolvers, ammunition, gun implements, canvas and leather goods, hunting clothing, bicycles, lanterns, hunting knives and hatchets, calls, decoys, police goods, football goods, boxing gloves, compasses, roller and ice skates, gymnasium clothing, gun locks, springs and parts, flask, pouch and belt parts, and gunsmiths' tools.

E. T. Barnum, Detroit, Mich., has just issued an annual fall supplement to his general catalogue; also a supplement devoted to builders' iron work, one to his fence catalogue, and minor ones. These are being sent to the trade in a number of foreign countries, as well as in the United States.

The E. W. Bliss Co., Brooklyn, N. Y., have issued a catalogue of their Flexible Friction Clutch Pulleys, which contains a great deal of information of value, some points of which we are pleased to mention in another connection.

Review of the Markets.

Money: There has been little of note to mention in the money market during the past fortnight, affairs moving along in an even way. Rates have stiffened a little, owing to an increased demand for funds with which to move the crops, both at the West and the South. One feature which, however, ought to bear mentioning, is the low price for American products, both wheat and cotton being depressed to a remarkable degree, the lowest prices for a half century for each having been reached. As these products are sent abroad to a great extent, and for which gold or its equivalent in trade is sent us in return, the financial result is somewhat problematical.

Treasury receipts have increased to such an extent that there is no further fear upon that score for the present.

The price of silver has also advanced, which, if it continue, will be a relief to a large section of the country.

There are some disquieting features in the labor situation, but this is to be periodically expected for some time to come. One half of the sugar refineries of the country have closed, with an expectation that more will follow. The tin-plate mills of the country are also closing down on account of wage disputes. The Carnegie people have reduced wages, and the number of people out of employment in the cotton manufacturing districts is considerable.

In the Hardware trade the reports are of a favorable character. Special reports coming from Boston say that business has been very fair; in Philadelphia, paints and glass not very active; Pittsburg, better than for a long time; Buffalo, very satisfactory; Baltimore, a good movement; Chicago, a slight falling off in orders; St. Louis, keeping up with the pace of the season, which has been exceptionally good, and throughout the South the reports are uniformly fair, Texas and the South Atlantic Coast being very bright spots.

Retail Hardware dealers in New York and Brooklyn report a large business in all lines of goods. A dealer in Brooklyn expressed himself in a very enthusiastic manner as to the results of the season so far. A walk down Chambers Street, New York, in the afternoon, and a look at the small tablets on the wagons, shows that all the suburbs of New York are well represented.

The carriage and tire bolt makers at a recent meeting decided to advance prices upon an average of fifteen per cent.

Strap and T Hinges have been in good demand. The business is well distributed, but the orders are small. Still, the aggregate is large, September being the best month of the year. The movement indicates a rapid increase in small building enterprises in all the suburban towns of the country.

The demand for skates has been very satisfactory this season; in fact, better than any year before.

Linseed Oil is steadily held, the offerings being light, and some have been withdrawn. In white lead there has been little change in prices; still, competition is somewhat severe, and the tone of the market is not strong. Dry lead is low, and futures are weak. Lead in oil is weak. In red lead there has been a slight advance, but at the expense of business. Litharge is in good request.

In Window Glass the demand is fair, with discounts reported at 90 per cent. for double strength glass. New York importers of French window and picture glass have published a new price list, with reductions to correspond to the new tariff. The discount on the list is 60 and 10 and 5 per cent.

Ammunition men report a business hardly equal to last year; the exception being in that of loaded shells, which at the moment is very large.

File manufacturers report a fair business, but it still continues in the way of small orders.

In silver-plated and flat ware there is a confident feeling that the Christmas trade will come up to the proportions of past years. Travelers are all out, and sending in fair orders. The spoon trade, which is not a holiday specialty, is reported as dull.

In rope and cordage there is believed to be some important movements in anticipation. The rumors are, however, so vague that it is impracticable to state the accurate position. One rumor is that the John Good Cordage Co. and the United

Digitized by Google

States Cordage Co. are to be amalgamated, while, on the other hand, it is reported that the companies composing the combination are in a state of disintegration. The binder twine season is now over, and the effect upon prices will in any case be more apparent than real.

Nails: Wire Nails are active, and prices out of store in New York have been advanced five cents to meet the increase in freight rates. Quotations are $1 base at the mill in Pittsburg and $1.25@$1.30 out of store in New York. Cut Nails are in fair demand, the price being $1.05 out of store in New York and 95 cents on dock in New York Barb Wire is quoted at $2 f. o. b. in Pittsburg In nails there is a small export trade with the eastern coast of South America and South Africa; still, the main supplies come from England, Germany and Belgium.

Metals: The iron market shows considerable improvement in various directions, and the demand for structural material shows that the spirit of building enterprise is reviving. Prices do not, however, advance the capacity of production, keeping in full pace with the consumption. The demand is, however, for quick shipments. Prices are $12.50@$13 for No. 1, and $11@$11.25 for No. 2. Southern is $11.50@12 for No. 1; $11@$11.25 for No. 2. Tin is dull, and the prices made by the syndicate which is endeavoring to control the market are barely maintained; in fact, they are slowly receding. Stocks are plentiful and accumulating. Copper is very firm, the production being sold ahead, and, it is said, to actual consumers. One lot of a half million pounds has been sold within the past fortnight at 9¾ cents. Lead is slow and difficult of sale. Stocks are plentiful. Spelter is being pressed for sale with drooping prices. Antimony is quiet, the demand being equal to the supply. In tin-plate the large withdrawals from bond will keep the market in a soft condition. Fresh importations are also on the way.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, report the following condition of the crops: "Cotton.—The large receipts anticipated have not appeared. Prices are continually dropping. In wheat the receipts have been large, and the quality is about the best on record. The price is the lowest on record since 1859. Corn is believed to be short to the minimum given by the government crop report, but crop reporters and statisticians still maintain that there are 1,500,000,000 bushels in the yield of next season. The consumption is rapidly decreasing, as is usual in such extreme cases. Oats will prove a good crop. In stocks and bonds what is needed is the willingness of large holders to set the pace for the smaller class in the reorganization schemes which are now before the general public."

THE ST. LOUIS TRADE.

Regarding the Hardware business in our city, would say that all of our houses have had all they could attend to during the last thirty days, and are still busy with orders now in hand. We expect that trade which is contiguous to St. Louis will keep up, and compare with our sister cities in the West. There is no doubt but that St. Louis is the best and cheapest market for Hardware in the country. With the varied stocks carried by all of our jobbers, St. Louis can compete and secure trade from any station. General Hardware in all its branches is low in price, and there is not in staple goods any opportunity for advance in prices. There is nothing to report in the matter of prices. Barbed Wire and Wire Nails seem to be off, as regards selling prices; Steel Cut Nails are firm, owing to the small demand, and but few factories are running or making Cut Nails. To sum up the whole trade in our line, would remark that everybody is busy. A. F. SHAPLEIGH HARDWARE CO.

THE CLEVELAND TRADE.

Business for the month of September hardly reached the expectations of those who were encouraged by the good business obtained in August. At the same time a very decided improvement is shown, as compared with September, 1893, which simply goes to confirm, what everybody is claiming, that we are on the road to improvement.

It is hardly to be expected when so many people are still out of employment, and so many others still compelled to economize, that we can have business restored to the same volume that we enjoyed before the late disturbances.

There is very little of interest to chronicle, as prices continue very weak, and seem if anything to be seeking a lower level. What business is being done is of a healthy nature, and covers the demand from day to day. Speculation is entirely absent, and there is no occasion for its appearance.

Carvers, pocket cutlery and other articles affected by the tariff are commencing to move in good quantities, all uncertainties having been dissipated.

Collections remain satisfactory, and general business conditions are encouraging.

THE MCINTOSH-HUNTINGTON CO.

THE DAVENPORT TRADE.

August sales were a little better, and September fully equal to those of 1893.

The nail market seems to have improved, but manufacturers give no reason for the advance, and jobbers are reluctant about changing their prices to conform, but are simply adding the actual five cents advance in freight.

The new tin-plate schedules of October 1st are in effect; the market is very much disturbed thereby, and prices are lower. Many American manufacturers have closed down, pending a readjustment of the wage question. One correspondent writes: "Our workmen have refused to bear any portion of this reduction, and as it is impossible for us to continue paying the wages which were adjusted under the McKinley tariff, and which were more than twice as high as those paid in Wales, we must stop."

The advance in Screws of September 27th, failed to materialize, and was rescinded on October 2d. Price of wheels and axes are higher. The late advance in Linseed Oil is well maintained. Rope prices are being cut in the West, but manufacturers' prices remain unchanged. Makers of steel goods are naming lower prices for 1895. The retail dealers are buying very cautiously, but as stocks are light, they are sending in frequent mail orders. Collections are good.

SICKELS, PRESTON & NUTTING CO.

THE BALTIMORE TRADE.

A stranger visiting our city for the first time, viewing the gay decorations along the principal thoroughfares, the flying bunting, the blending of orange and black (the State colors) worked into all sorts of conceivable designs, would marvel at the holiday appearance, and his first question would be, "What is it all about?" As

> He who far off beholds another dancing,
> Even one who dances best, and all the time
> Hears not the music that he dances to,
> Thinks him a madman, apprehending not
> The law which moves his else eccentric action,

so also would this visiting stranger deem us mad, unless apprised of the cause for all this jollity. The Orioles won the pennant, and the base ball enthusiasts are celebrating the victory. With all the hurrah attending such celebrations, it must not be supposed that business has been neglected. On the contrary, business has received a decided impetus on this very account. The low excursion rates ruling from points along the Shenandoah Valley and throughout Southwest Virginia have induced many visiting buyers from that section. Their coming always means increased activity in all departments, and

Digitized by Google

we look forward to a fairly busy period during the month of October. From agricultural regions the reports generally are favorable. The loss occasioned by the low price of wheat has almost been compensated for in the price of corn. Crops in general have been good, the yield heavy, and with the exception of cotton, bear a good margin of profit. The depreciation of this last named article is truly deplorable. King Cotton has become a puppet in the hands of the speculators.

The demand for seasonable goods, winter goods for the most part, still continues, house-furnishing Hardware running a close second. Orders are still of that endless variety feature, betokening skeleton stocks in the hands of the retailer. Confidence in prices is becoming more general, though as yet there seems but little disposition to anticipate future wants. Prices on many lines are very, very bad, and will bear watching.

Our gun business so far this season has been very gratifying, the recent issue of our catalogue largely influencing a heavy mail order business for interior points. The low values occasioned by the recent tariff changes have increased the sale of the Belgian guns to such an extent that some difficulty is being experienced in supplying the demand. Gun clothing, cleaning sets, implements and kindred goods are finding ready purchasers. Collections are very fair.

THE TABB & JENKINS HARDWARE CO.

THE PHILADELPHIA TRADE.

It is rather difficult to state the present condition of trade, as it moves by fits and starts. Sometimes it surprises by frequency of orders, and at other times it is hard to find them. Even the frequent orders are very small and many are required to run up into money. There is no doubt that merchants are more disposed to do business; everyone is tired of economy and dull sales, and anxious to do business, but timidity seems to be the order of the day.

Manufacturers seem to be encouraging this timidity, as they make advances with great delicacy and usually have not enough backbone to sustain them. The recent flurry in screws is a case in point. Screws are such a staple in the Hardware line that it was hoped it meant a gradual advance all along the line, but the baby only lived a week, and might well say in the old epitaph on a young baby:

"If I was so soon to be done for,
I wonder what I was begun for."

In other lines the same timidity appears, and while manufacturers are doubtless making many goods at no profit, they are still afraid to advance.

For all this, it must be admitted there is an undeniably better feeling in the trade, and business has more snap and is running to greater volume than in any other period of the year. Tools are once more in demand, and perhaps this is the most encouraging sign of all, as it shows men are once more getting down to work.

There have been a few minor changes in prices, but the disposition is more general to advance, and it is evident that factories have low stocks, and this ought to do much to bring higher values.

On the whole, the situation is brighter, while it is far from the boom advocated by some partisan papers.

BIDDLE HARDWARE CO.

THE MINNEAPOLIS TRADE.

We have been having dull weather for the past eight or ten days, and it has had some effect on business, but we are glad to report that there is general improvement all around. This improvement extends to all lines, jobbing and retail dry goods, groceries, boots and shoes, etc., as well as Hardware.

It will undoubtedly be a very quiet winter, except in lumbering business. The mills are all running full, flour mills being particularly active. Stocks as a rule in all kinds of merchandise are very much reduced; everyone at the present time still buying in small lots, and undoubtedly this will continue until spring trade opens up, when we hope for better times.

W. K. MORISON & CO.

THE VARNISH AND COACH COLOR TRADE.

In glancing over the Varnish and Coach Colors trade, we find that in the last few weeks mail orders are more frequent, and for larger quantities than for some time past. A great many customers are much busier than they have been in many months, but this improvement does not apply to every one by any means.

Prices remain practically unchanged, although in some lines the cost of raw material is greater. Matter of collections does not by any means show as great an improvement as the orders do, although there is some change for the better even in collections.

On the whole, the situation is certainly greatly improved since the middle of August, and it is sincerely hoped that the improvement may be permanent, and be felt in many new directions in the near future. Business is not what it ought to be yet, but there seems to be the first real sign of clearing in the general situation which has appeared since the long depression beginning in 1893. We certainly look for a decided improvement, though not for anything very large before about the beginning of another year.

EDWARD SMITH & CO.

Times Building, New York.

THE GRAPHITE INDUSTRY.

Brisk, active, rushing, snappy, are useful words in illustrating the state of the Graphite Trade for September; a continuing of steady increase commenced in August. The particular activity is in pencils, followed in regular order by crucibles, graphite paint, stove polish, lubricating grease, and graphite for lubricating and special purposes, so that notwithstanding the month was shortened by an extra Sunday and a holiday, the total sales show an increase over the totals of any month since March, 1893.

During the month forty-six new names have been added to roll of employees.

Orders are received from all directions, and from the old, regular customers, a very small per centage of the business being a result of new trade.

The belief manifested last month by many manufacturers, that after the jobber stocked up the volume of business would materially lessen, is not carried out by facts, as we are receiving additional and duplicate orders from jobbers, showing a demand by small dealer and consumer, and a healthful state of affairs.

We do not hesitate to emphasize our belief that the outlook for the manufacturer of standard goods is in every way encouraging. Collections prompt and satisfactory.

JOSEPH DIXON CRUCIBLE CO.

Jersey City, N. J.

A Dayton, Ohio, exchange states that the Dayton Mfg. Co. recently purchased from the Covington (Ky.) Brass Mfg. Co., their entire gasoline stove plant, which is shortly to be removed to Dayton. The removal will be made as soon as a new building, which is now in process of erection, is completed. This building is being constructed by the Dayton Mfg. Co. in the rear of their present building at the corner of Third and Garfield Streets. It will be a substantial brick structure, dimensions 63x120 feet.

The different trades in Brooklyn, N. Y., have contributed quite largely in the building of the armory for the Thirteenth Regiment, N. Y. S. G., and a grand opening will take place extending from October 15th to 20th. The entertainment will be a pleasing one, music, refreshments and souvenirs being given. The bicycle trade is specially interested in the affair, as many of the members of the regiment are devotees to the wheel.

The Century Cycle Mfg. Co., Nos. 243 to 249 Virginia Avenue, Indianapolis, Ind., whose factory was destroyed by fire in March last, had enough wheels in their warehouse to keep up a portion of their trade, but are now compelled by the demand to start their new factory at Shelbyville, Ind. They hope to be in full running order by November 1st.

The Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York, show upon page 41 of this issue several of their "Prize Winner" Horse Clippers. They have also a neat little circular illustrating and describing the same, which they will be pleased to send upon application.

Send for circular and price list.

Can be sold by all Hardware dealers.

The manufactory of M. Einwachter, of Newark, N. J., has been incorporated as a stock company, and the following officers elected: C. F. Guyon, president; Henry Hopkins, vice-president; T. W. Munroe, secretary, and J. Einwachter, superintendent. The company are large manufacturers of mechanics' tools, tracing wheels, curling tongs, door springs and Hardware specialties. The C. F. Guyon Co., New York, are sole agents of the Newark corporation.

A dispatch from St. Louis, Mo., under date of October 2d, says that "the Niedringhaus Tin-Plate & Rolling Mills have temporarily shut down. The employees were informed that they must consent to a reduction of nearly 25 per cent. in their wages or the mills would not reopen. The men must decide, within a week, whether they will suffer the reduction. It is not likely that the mills will reopen, for many of the men have gone East to find work."

W. W. Ferry, No. 88 Chambers Street, New York, has been appointed agent of the Avery Stamping Co., of Cleveland, Ohio, for the territory of New York City, Brooklyn, Baltimore, Washington, Philadelphia, and New Jersey and New England. The Avery Stamping Co. are manufacturers of steel hollow ware, and the Avery silver steel spiders, griddles, kettles and hotel ware.

HARDWARE refers to kissing and wheelbarrows as two things which have never been improved. But, great Scott! That would be impossible.—*New Haven* (Conn.) *Union.*

Waverly, Mo.—Charles Kraus, Hardware, etc., sold Hardware stock to J. H. Leach.

Record of Improvements.

Admire, Kan.—T. W. Kneeland is repairing his Hardware store.

St. Augustine, Fla.—C. F. Hamblen has just completed the erection of the finest Hardware store in this city. It is a light, airy structure of two floors and storage room in the roof. The ground floor is 90x44 feet and 12 feet in height; the first floor 90x40 feet and 10 feet in height. The whole amount of floor space is 25,000 square feet. The building has been fitted to suit all needs and has 10,000 feet of shelving.

Superior, Wis.—J. F. Bishoff's Hardware store will soon be found in new and handsome quarters, as a new block is to be erected, of which he is to occupy the ground floor.

Traverse City, Mich.—A. Pohoral will move his Hardware store into the Wilhelm, Bartak & Co. building on Front Street. Changes will be made in the front, larger lights put in, the glass front lowered and other improvements made.

Weathersford, Tex.—The firm of Thompson, Lowe & Arrington are moving their stock of Hardware from York Avenue to North Main Street, into the building just vacated by L. F. Wright & Co. They will still retain their present building as an iron storage department.

Business Embarrassments.

Cleveland, Ohio.—L. T. Jones & Co., Hardware dealers at No. 9 Woodland Avenue, have assigned to Miles H. Lockwood; assets and liabilities small.

Dayton, Ohio.—Herman F. Rieck, Hardware dealer, has assigned; assets, $4500.

Fairport, N. Y.—Henry H. Brydges, Hardware dealer, has assigned to Andrew J. Deal.

San Antontis, Tex.—Thomas B. Wren, Hardware merchant, has assigned to George Powell; liabilities, $9000; assets, $10,000.

Sheboygan, Minn.—Henry Muth, dealer in Hardware, has assigned; liabilities, $6000; assets, $15,000.

St. Thomas, Ont.—G. A. McMurty & Co., Hardware merchants, have made an assignment to Philip Buck, of Brantford.

Burglaries in Hardware Stores.

Bellevue, Tex.—Melton & Spivey, $400.
Black Hawk, Col.—Towell-Clark Hardware Co., $150.
Canton, S. D.—O. A Rudolph, $100.
Davis, Ill.—J. S. Afflesbough, cutlery.
Delhi, Ont.—E. Morgan, cutlery.
Evansville, Wis.—F. A. Baker & Co., $200.
Loveland, Col.—Ferguson, Brandt & Co., $200.
Mackinaw, Ill.—George Smith, $60
Milton, Wis.—Crosley & Markson, $100.
Ottawa, Ont.—Butterworth & Co., revolvers.
Toronto, Ohio.—Toronto Hardware Co., cutlery.
Waterbury, Vt.—Batchelder & Robinson, $40
West Liberty, Ohio.—W. S. Waugh, $300.
Weston, Can.—Key's Hardware store, $30.
Woodland, Cal.—Marshall Diggs, $250.
Wortham, Tex.—Banner Bros., $50.
Yates City, Ill.—J. W. Wood, Jr., $75.

Fires in Hardware Stores.

Dows, Iowa.—Fryslie & Longley, Hardware, reported fire loss of $3600; insured for $1900.

Dows, Iowa.—J. L. Deuel & Co., Hardware; reported fire loss of $3000; fully insured.

Esthervill, Iowa.—Chandler & Barron, Hardware; destroyed by fire; loss, $5000; covered by insurance.

Lemoore, Cal.—Robert Moore, Hardware; damaged by fire; loss on building, $1200; insurance, $800; on stock, loss, $2800; insurance, $2000.

Leroy, Minn.—C. A. Young; loss, $3000.

Minot, N. K.—Peterson & Jacobson, Hardware, bicycles, guns, ammunition, etc.; store destroyed by fire; loss, $7000.

Roberts, Ill.—W. P. Landel; loss not stated

THE HANDY STOVE POLISHING MITTEN.

The above illustration will give a fair idea of its appearance. It will easily fit the hand, has a waterproof back, and the whole front is made of durable and soft sheepskin, tanned with the wool on. By using the Stove Polishing Mitten, blacking a stove ceases to be dirty and disagreeable, it will make a stove shine like a mirror. The Mitten is also useful for polishing household furniture. It cannot scratch the most delicate material or varnish, while the finest possible polish can be rendered.

The Polishing Mitten can be put to many uses. Sells to almost every person you meet, always gives satisfaction. Among the uses to which it may be put are:

Polishing Stoves, Ranges, etc., it has no equal.

Cleaning and Shining Windows, Show Cases, and other Glassware, the Mitten is highly satisfactory.

Polishing Nickel-Plated Ware, such as Bicycles, Machinery, etc., the Mitten is becoming more popular daily.

Polishing Boots and Shoes, the Mitten is as much superior to a brush as a brush is to a stick. Where one used it is "a joy forever."

Cleansing and Polishing Furniture, use the Mitten and Dauber. The results are always pleasing.

Polishing Brassware, Tinware, etc., the Mitten serves the purpose better than anything else.

Manufactured expressly for the trade. They sell fast wherever introduced to HARDWARE DEALERS.
We will quote you low prices and only ask a trial order. Sample by mail 25c. Address

JOHN H. GRAHAM & CO., Gen'l Agents,

P. O. Box 1042. **113 Chambers Street, New York.**

The Conroy patented New Automatic Refrigerator Door Fastener, with lock and key.

THIS FASTENER is the most complete one ever invented. The door will push to more easily with this Fastener than any in the market. The Fastener will tighten the door by the door closing. It is the most substantial; nothing about it to get out of order. By lifting the handle quarter circle the door will open, and if it sticks it will release it. It has a new and improved lock, absolutely secure. Made for flush or raised doors, composed of brass or bronze metal in any finish desired, plain or ornamental.

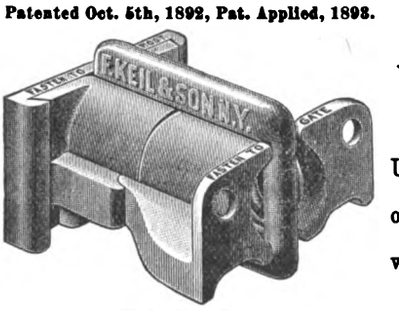
THE WATERBURY FARREL FOUNDRY AND MACHINE COMPANY,
Waterbury, Connecticut, U. S. A.

The man who had a little piece of lawn in front of his house about as big as a greenback, and who took care of it as if it were a baby, was pottering around it the other morning with a pair of scissors and a razor, when a neighbor came by and hung his chin over the fence.

"Why don't you have a lawn mower?" he asked, after contemplating the scene a minute or two.



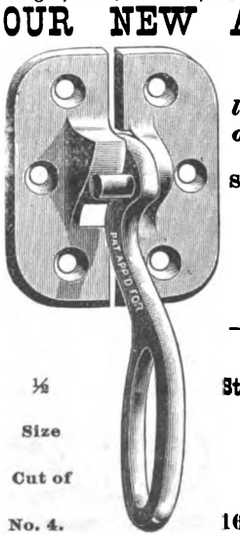
"I don't want a lawn mower," replied the landscape gardener; "what I want is more lawn," and the neighbor hurried away before the house should fall upon him and crush him still more.
—*Detroit Free Press.*

THE SUPERIOR SPRING HINGE FOR HOUSE GATES.

—Surpasses all known gate hinges ever placed on the market.—

Patented Oct. 5th, 1892, Pat. Applied, 1893.

Tested Compound Springs, Rustless Finish.



WEATHER PROOF. Use 3 hinges on heavy or wide gates.

Half Size Cut.

A True gate hinge; swings both ways, does not raise the gate as ordinary hinges do, but opens level. Is self-shutting and always stops at the centre. Has no parts to get loose or out of place, and is easily applied. When adjusting tire bolts or wood screws may be used for both post and gate or either, thus covering all requirements. Any catch may be used with these hinges; none, however, are necessary.

OUR NEW AUTOMATIC FASTENER.

Patent Applied for.

½ Size Cut of No. 4.

Locks as easy as an ordinary lock, wedges the door airtight and opens it without effort.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

BANNER OIL LAMP STOVE. NO CHIMNEY NEEDED.

No Smoke. Patent Applied for. **No Odor.**

No. 971.—Stove Complete. Height, 26 in.

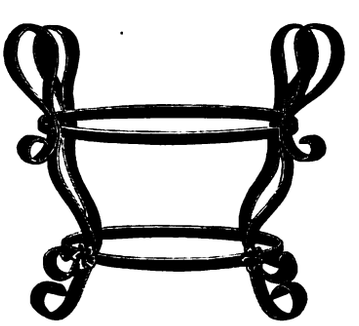

Fig. 1.—Shows Wrought Iron Stand in which Fount rests.

Fig. 2.—Showing Fount with Ratchet Wick Movement.

Fig. 3.—Showing body of stove removed from Fount.

Economy and Convenience in Heating.

POINTS.

The Oil Fount is made of brass, highly nickeled and no danger of leaking; holds one gallon of oil.

The Fount Frame is artistically made of wrought iron, making a solid base for the stove.

The Burner is the best made, and only one with inside feeder wick, allowing all the oil to be consumed.

The Indicator shows at all times how much oil there is in fount.

The Flame is regulated with the screw wick movement, which allows the wick to be raised or lowered with nicety and exactness.

The Drum has sliding door for lighting. The round openings allow the cold air to be drawn into the hot air chamber, which becomes heated and is thrown off with the radiating force, thus making a triple draft.

Get one for your Bed, Bath or Smoking Room, Library, Nursery, Office or Conservatory.

The American Hardware Trades Reference Book and Purchasing Guide.

The Complete Index to all the Manufacturers in North America, including all of the U. S. and Canada of

HARDWARE of all KINDS, TOOLS of all kinds, IRON & STEEL of every kind, HOUSEFURNISHING GOODS of every Description, STOVES, RANGES, HEATERS, and all kinds of COOKING APPARATUS and UTENSILS, AGRICULTURAL IMPLEMENTS, MACHINES and TOOLS of every Description, and all other articles handled by these trades.

Gives the names of over **15,000 Manufacturers;** the index gives the names of 25,000 articles and special names and brands of articles covering completely the United States and Canada. It also gives the amount of capital invested by each manufacturer.

The book is minutely classified by an alphabetically arranged index, naming every article handled by these trades. For instance: If you wish to find all the manufacturers of wire fence, you turn to "Wire Fence" in the alphabetical index and it will show you all the manufacturers of wire fence in the United States and Canada, arranged alphabetically by States, and the amount of capital invested by each in the business, showing which is the largest, etc. If you desire to know who makes the "Eureka" brand of fencing, you can find it in the same way. The same applies to every article and every special name or brand of article handled by these trades.

EDITION FOR 1894, 10,000 COPIES.

Circulating in every section of U. S. and Canada. Many in foreign countries

Manufacturers given any number of headings in this book free of charge. Advertisements at reasonable rates.

Just What Every Manufacturer Wants!

THE REFERENCE BOOK

OF THE

Hardware and Kindred Trades of the United States and Canada.

The book contains, in the most condensed and convenient form possible, the Names and Ratings of all firms in the following Trades in the United States and Canada:

HARDWARE DEALERS. **AGRICULTURAL IMPLEMENT DEALERS.**
DEALERS IN SPORTING GOODS, BICYCLES, FIREARMS, &c. **STOVE DEALERS.**

Certain marks are printed after each name, showing the line or lines of goods handled.

The work is complete, condensed and convenient, and will be found especially desirable in sending circulars, on account of the street numbers. The ratings enable the user to select names of any specified rating or over that may be desired.

In cities the lists are classified—Hardware dealers all in one condensed list, stove dealers in another, etc. In most cases, in the Hardware list, we specify the special kind of Hardware handled, as shelf Hardware, cutlery, etc.

Wardrobe Locks,
Chest Locks,
Desk Locks.

A complete line of more than 1000 List Numbers, exclusive of our old and complete line of Yale Cabinet Locks.

THE YALE & TOWNE MFG. CO.,
STAMFORD CONN.

NEW YORK. CHICAGO. PHILADELPHIA. BOSTON. PITTSBURG. SAN FRANCISCO.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Situations Wanted.

A YOUNG man with six years experience in builders' Hardware, machinists' tools and supplies, will be open for engagement October 15th. A-1 references as to ability and character. Address F. A. F., care HARDWARE, No. 143 Chambers Street, New York City.

TRAVELING Salesman wants A-1 Specialties or Staple Hardware lines. Cutlery, Sporting Goods or Tools. Ohio, Michigan and Indiana. Established trade. A-1 reference. M. I. Lee, Toledo, Ohio. General delivery.

AMERICAN, aged twenty-nine, disengaged October 15th, desires situation. Twelve years business experience with leading manufacturers. Understands bookkeeping, correspondence, general office work, etc. Address American, care HARDWARE, No. 143 Chambers Street, New York.

WANTED—First-class salesmen will find it to their interest to correspond with the Sun Mfg. Co., Greenfield, Ohio, in reference to their Combined Show Case Money Drawers, and other scheme goods, to carry as a side line.

TRAVELING SALESMAN wants A1 selling specialties for Wisconsin and Minnesota. Address F. S., care HARDWARE, No. 143 Chambers Street, New York City.

A YOUNG man with eight years experience in builders' and ice box Hardware, also in bellhangers' and locksmiths' Hardware, desires a position with wholesale or retail house, and with moderate terms to prove his ability. Address L. S. S., care HARDWARE, No. 143 Chambers Street, New York.

AN experienced salesman, machinists' tools and mill supplies, ("established trade"), is open to an engagement. A1 references. Address Active, care HARDWARE, No. 143 Chambers Street, New York.

AS bookkeeper and salesman, Hardware, stoves or house-furnishing house. Reference, Palderson Bros. Co. Address, W. N. F., care HARDWARE, No 143 Chambers Street, New York.

EXPERIENCED traveling salesman wants good specialties or side line on commission, for Hardware, stove, or general trade, in New York and adjoining States. Address System, care HARDWARE, No. 143 Chambers Street, New York.

TO MANUFACTURERS.—If you desire to increase your sales communicate with the advertiser, who represents a Hardware Manufacturing Co., and is open to add to his line of representation. He has a large personal acquaintance with domestic and export trade. Address New York Representative, care HARDWARE, No. 143 Chambers Street, New York.

Help Wanted.

WANTED thoroughly reliable clerk in retail tool store in Philadelphia, Address S. & Co., care HARDWARE, No. 143 Chambers Street, New York.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No. 115 North Vine Street, Hazleton, Pa.

WE want a few "hustlers" to sell our trucks on commission. They are "sellers" easily carried as a side line. Those who can furnish good references can secure a good thing. Enclose stamp for particulars. Address G. L. Van Namee Mfg. Co., Syracuse, N. Y.

WANTED by Tubular Lantern manufacturers two men, one who thoroughly understands the making and designing of dies and tools, suitable for wire and sheet metal. Also man competent to take charge of assembling lantern parts. Must be bright, progressive men, fully up to the art, Address L. A. N., care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Wanted Chicago Agencies.

A WELL-KNOWN business man, of financial responsibility, a good salesman, will establish CHICAGO office October 1st and wishes to obtain agency of manufacturers of Hardware specialties, or any goods that can be sold to jobbers. Manufacturers of any such goods, seeking an outlet, will find this an excellent opportunity. The commercial credit and business references of the party are the very best. Address "Chicago Agencies," care HARDWARE, No. 143 Chambers Street, New York.

Agencies for Hardware Specialties Wanted.

WANTED—Sales agency. Manufacturers of leading lines of Hardware or kindred goods, who are not properly or sufficiently represented to the jobbing trade, in territory between Pittsburg and Omaha, would do well to correspond as below. "Business," care HARDWARE, No. 143 Chambers Street, New York City.

BY a party who has been in that line for years and has introduced and obtained a large trade on several specialties Special attention paid to the Eastern and Southern and Canadian market, but have connections throughout the United States and export market. Address "New York House," care HARDWARE, No. 143 Chambers Street, New York.

Business Opportunities.

WANTED—A first-class builder. Contractor of Rochester, N. Y., having an experience of ten years, would like to enlarge his business by taking in a partner with capital. For further particulars address P. O. Box 666, Rochester, N. Y.

WANTED partner with $10,000 in large retail Hardware business. Capital desired to extend business. Address Opportunity, care HARDWARE, No. 143 Chambers Street, New York.

For Sale.

A DESIRABLE Factory in Yonkers, N. Y., within 3½ miles of the New York City line, one hour from Battery, on line of railroad, with siding, adapted to any kind of manufacturing. Elevator, electric light plant, engine, and all other conveniences. This is a rare chance to obtain a valuable factory property, beautifully situated, in healthful locality, where property is rapidly advancing as the metropolis moves northward. The price is less than half its real value For further particulars apply to Todd & Bible, 261 Broadway, New York City.

Law and Collections.

PLACE your Chicago Collections and *legal business* with SAYLER & FRAZER, Attorneys-at-Law, 171 La Salle Street (N. Y. Life Building), Chicago, Ill.

PAINTED AND GALVANIZED WINDOW SCREEN CLOTH,

AND EVERY KIND OF

IRON, STEEL, BRASS AND COPPER WIRE CLOTH.

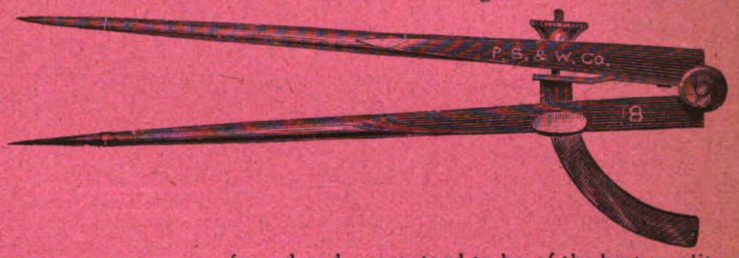
TRENTON, NEW JERSEY. 117 and 119 Liberty Street, NEW YORK. 171 and 173 Lake Street, CHICAGO. 25 and 27 Fremont Street SAN FRANCISCO.

Digitized by Google

The Peck, Stow & Wilcox Co.,

Manufacture a large line of MACHINISTS' and CARPENTERS' tools of the highest grade and best quality.

SOLID STEEL SIDE CUTTING PLIERS. These goods are SOLID FORGED from the best quality of steel, have RAISED CUTTERS, and are equal in every respect to any goods of the kind manufactured. Largely used by telephone and telegraph companies. For jewelers and fine machinists, we furnish these nickel plated. The sizes are 5, 6, 7 and 8 inches.



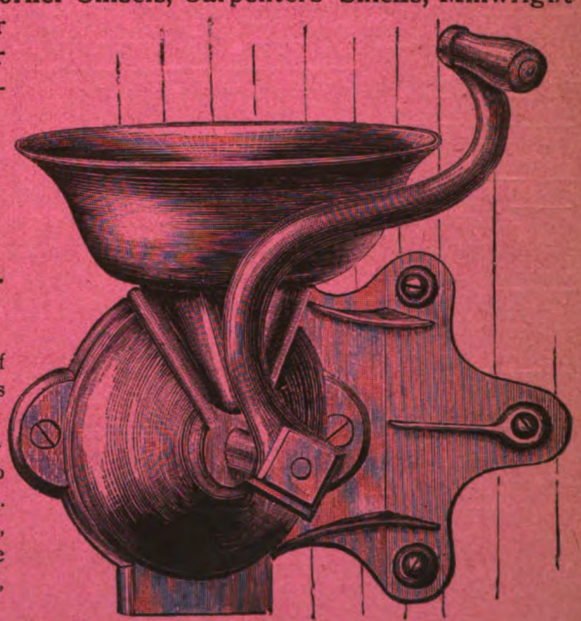
CAST STEEL SAFETY SIDE CUTTING PLIERS. The handles are covered with a patent insulation, specially made for the use of linemen, electricians and others, who wish to cut wires heavily charged with electricity. Tested to insulate against a current of 2,500 volts. The insulated covering is not brittle and will not flake off. The tool is of solid cast steel. Every trolley car should carry one of these pliers as a protection against accidents and a security of life. Made in three sizes, 6, 7 and 8 inches.

CAST STEEL PLIERS. Flat and Round Nosed. Our Nos. 20 and 25 are made of the highest grade of steel, are finely tempered, and are superior to any goods made in the country. Their quality and finish cannot be surpassed. Our Nos. 200 and 250 are made with lipped joints, are of solid steel, at somewhat less price than our other grade, but very much superior to imported goods.

CAST STEEL WING DIVIDERS. These goods of our make are so favorably and well known among the trade that they need no further recommendation.

BUTTON'S PATTERN COMBINED PLIERS and CUTTING NIPPERS. These goods are solid steel forged and guaranteed to be of the best quality. Made in sizes from 4½ to 12 inches.

AUGER BITS, SOLID CAST STEEL, DOUBLE SPUR. Furnished in sets or by the dozen. Full line, finely finished and well tempered.



Carpenters' Pincers, Saddlers' Punches, Compasses, Calipers, inside and outside, Shingling Hatchets, Claw Hatchets, Half Hatchets, Hunters' Hatchets, Boys' Axes, Machinists' Hammers, Farriers' Hammers, Socket Firmer and Framing Chisels, plain or with beveled edges, Corner Chisels, Carpenters' Snicks, Millwright Chisels, Paring Chisels, Millwright Gouges, Tanged Firmer Chisels and Gouges, Socket Firmer Gouges, Socket Firmer Paring Gouges, Drawing Knives, Razor Blade and Carpenters', Coach and Wagon makers'.

If the above named goods bear the stamp of the

P. S. & W. Co.

it will be a guarantee of their excellence.

THE POPULAR COFFEE MILL. This mill, the illustration of which is here shown, is in truth a **Popular Coffee Mill** on account of its superior quality as a grinder, and because it can be placed anywhere against the wall. It is so made that it projects at an angle of about forty-five degrees from the wall, and unlike other side mills it is not necessary to find a jamb or corner on which to fasten it. It can be put up anywhere. It is well made and strong, is furnished in two sizes, known as No. 1 or 2, and can be retailed for 50 or 60 cents each. No dealers' stock is complete without this mill. We also make a large line of box and side coffee mills, of modern designs and with the latest improvements.

THE TRIUMPH

SIMPLE IN CONSTRUCTION.

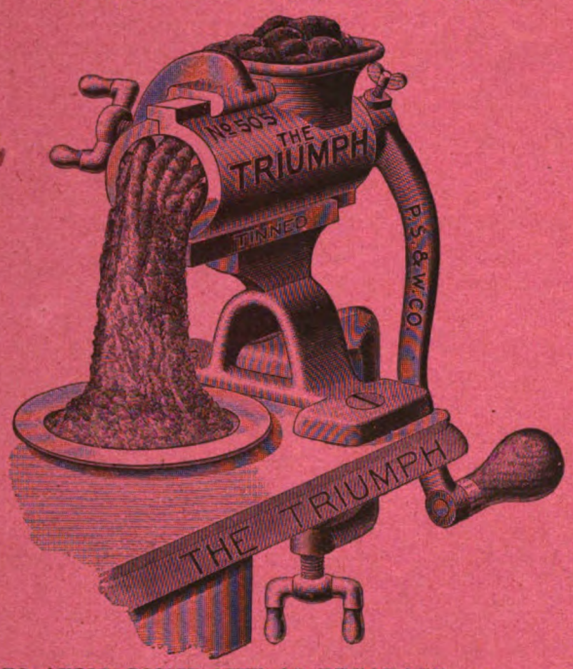
A New Meat Chopper of the Highest Grade and Best Quality

Of Great Power. Adapted to a Variety of Uses.

THE TRIUMPH OF SUCCESS. THE TRIUMPH OF ACHIEVEMENT. THE TRIUMPH OF INVENTIVE GENIUS.

All the Essential Qualities in the Best Family Meat Chopper are found in the TRIUMPH.

TINNED TO PREVENT RUST.



THE NEW

"Triumph" Meat Chopper

THE TRIUMPH OF DISCOVERY.
THE TRIUMPH OF VICTORY.

The Cheapest and by far the Best Meat Chopper ever Manufactured.

ALL TRIUMPH CUTTERS ARE TINNED.

A remarkable statement, unsolicited, coming to us under date of Oct. 21, 1892, from a party very familiar with all the Meat Cutters now on the market, and thoroughly acquainted with their method of construction, capacity and ease of operation:

"I have been experimenting all day with the **Triumph Meat Chopper.** As an all-round family machine it has no equal. For cold cooked beef, either fresh or corned, it will beat all others to death; also on all fat meat without any lean or any hard substance to hold the fat; it excels all others way out of sight. There is nothing so far devised or invented that will prepare apples for mince pies like this machine. It also cuts potatoes for hash. But I want to emphasize its capacity for cutting apples for mince pies; in this particular it excels everything in existence. While for cutting raw beef, or pork for sausages or hash, or for any other substance, it is unquestionably what you have already termed it, **'The Triumph of inventive genius.'"**

THE PARTS ARE SO FORMED AS TO AVOID POSSIBILITY OF BREAKAGE.
THERE ARE NO SCREWS OR NUTS TO TAKE OFF AND LOSE.
THE CUTTING MECHANISM NEVER GETS OUT OF ORDER.
THERE ARE ONLY THREE PARTS TO CLEAN.
IT IS THE ONLY CUTTER THAT CAN BE CLEANED BY MERELY PUTTING THE CUTTING PARTS INTO HOT WATER.

No sharpening is ever needed, therefore no extra knives or discs are required. Pieces of bone or wood in the substance to be cut, will not break it. It will cut all kinds of meat, however stringy, fat, lean, raw, cooked, dry or tough. It is a hardy machine that will endure rough usage. It will work as well every time it is used as at first, and for household use it will last a lifetime. It will also cut many kinds of vegetables.

A PENNY SAVED IS A PENNY EARNED.

A Few Grains of Common Sense.

In these hard times we need to economize in our food, not by going without, but by seeing that we have enough, and not too much, that it is healthy and nutritious, and that none of it is wasted.

If you buy a porterhouse steak, you have a long fag end to give to the cat. If you buy a sirloin, you have a small piece that is tender and juicy, and a large piece that is tough, stringy and dry.

If you buy a round steak you need a remarkably good butcher or remarkably good teeth.

If you have a Triumph Meat Cutter, you do not need to worry because you cannot get a steak that just suits you. Whatever you get, run it through the meat cutter and make it into flat cakes. You can then broil it, which is best, or fry it, which some people do. Besides if cut, it can be seasoned all through; all parts are thoroughly mixed, the juicy parts flavor the dry parts, and the whole is both delicious and nutritious. Moreover, to cut it fine aids digestion. Beef is one of the most nutritious of all meats, and with the exception of mutton and venison the most readily digested, if chewed fine. If swallowed in umps, digestion is retarded.

What we claim for the Triumph Meat Cutter is that with it you can cut your meat thoroughly. No strings, no bits of muscle, not even bits of bone are found in its product. If you want your beef in small pieces, run it through once; if still finer, twice. For Hamburg steak it cannot be chopped too fine.

We have no word to say against other meat cutters. They have a broad field, and all have their good points; but we do say that for family use, the Triumph cutter has never yet been equaled. It has no complicated machinery to adjust, no difficult parts to wash. Any servant girl can be taught to put it together and to use it in two minutes.

For those who cannot afford to buy the better grades of steak it is invaluable. Any piece of beef after going through this meat cutter can be made into good steak by making it into a flat cake. We do not say that a neck piece will be made as nice and juicy as porterhouse, but we do say that it can be made both palatable and digestible.

Some people reject meat cutters because they do not make good hash. It is true that no meat chopping machine will leave boiled potato in pieces. If you want it that way the old fashioned chopping knife, with all the time and trouble it takes to use it is your best recourse. But for mince pies, Hamburg steak, croquettes, and many other dishes of the kind, nothing can equal a meat cutter, and no cutter can equal the Triumph.

Until your dealer learns its value and carries it in stock, write to

THE PECK, STOW & WILCOX CO., Southington, Conn., or New York.

Who will deliver it any where in the United States, express prepaid, for $1.75. Your Hardware dealer should sell it to you at the same price.

ESTABLISHED 1818.

"Pennsylvania" Fruit Picker

This Cut almost speaks for itself—the device being so much like the human hand, shows at once the utility of the article.

PATENTED.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and Easily Adjusted to a Pole. It has been sold for several years, and the demand (as it is becoming known) is steadily increasing. The difficulty of detaching fruit and securing it unbruised is apparent to everyone so engaged. This overcomes the difficulty, and saves the finest fruit, which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities. **Price, per doz., $6.00. Liberal discount to dealers.** It will gather Apples, Peaches, Pears, &c.

—MANUFACTURED BY—

Pennsylvania Wire Works,
EDWARD DARBY & SONS,

233 and 235 ARCH STREET, PHILADELPHIA, PA.

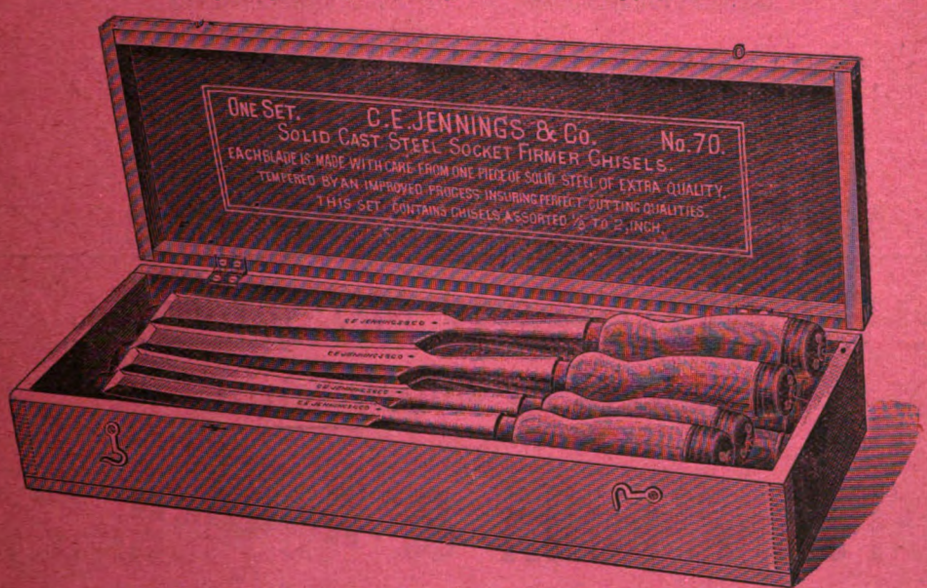
C. E. Jennings & Co.'s Superior Quality Auger Bit Sets, No. 710.

Packed in Flexible Canvas Rolls. Patent Applied For.

These Bits are made from the finest Tool Steel it is possible to procure for the purpose, ground to exact size and designed for Mechanics' use, and not intended to compete with the low priced tools of this pattern now on the market. Each bit is stamped with our full name and number as a guarantee of quality. We also test every bit before leaving the works and give the consumer our absolute guarantee authorizing the Dealer to take them back if defective in any particular. We have recently designed an improved roll for packing these bits and have applied for a patent on the same—hereafter all our No. 710 Sets will be packed in these Rolls. They are made of dark-colored canvas, well-lined with blue canton flannel, having a receptacle for each Bit, Shanks and Points protected by extra canvas. It makes it very convenient for the mechanic to keep the Bits safe from injury, and to carry them wherever needed. The case rolled up, with the Bits complete, measures 3x11 inches, and it may be thrown into the kit of tools without injury to the Bits, or to other tools with which it may come in contact.



No. 710 Set. Improved Pattern Extension Lip, full polished, 13 Bits, 32½ quarters, one each, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16—16 inch, per set, $6.25. These sets or our No. 10 Bits in separate sizes can be obtained of any Hardware house in the United States. In case they cannot furnish them send direct to us.

C. E. JENNINGS & CO.'S CHISEL SET.

These Chisels are made from the finest Tool Steel, tempered by an improved process, ground sharp and honed ready for use and put up with patent improved leather tipped handles.

No. 70.

Per Set, $7.50.

No. 70.

Per Set, $7.50.

This cut represents our No. 70 Chisel Set, containing one each of the following sizes, ⅛, ¼, ⅜, ½, ⅝, ¾, ⅞, 1, 1¼, 1½, 1¾, 2 inches. In fancy wooden box.

Our list of Tool Chests is now ready and will be sent on application. We use only our best tools in our high grade chests and make a low price for the chest complete for the sake of introducing our own make of tools.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made **Smokeless Schultze Powder** famous all over the world, while its **hard flinty grain** and specially regulated moisture makes loading so easy that any amateur can now do so successfully

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U.S. Agents

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

A BELT BY ANY OTHER NAME WON'T WEAR AS WELL.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

- - - A QUESTION. - - -

Why do all Sportsmen prefer

EUREKA GUN IMPLEMENTS?

THE ANSWER

Is because the No. 0 Closer gives a square crimp; the No. 95 Cleaning Rod is made just the right weight and length for all guns; the Powder Measure No 20R is standard for all grades of powder and the complete line is UP TO DATE.

Just added a complete set of Cleaning Tools to our Eureka Line No. 164, containing No 95 Cleaning Rod, Flannel Wiper, Steel Wire Scratch Brush, Bristle Brush, Bottle of Oil, Tube of Paravaseline, Oil Can and Screwdriver. $1.25 per set.

THE

AMERICAN WICK

Made by the WICK DEPARTMENT Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

NEW .22-CALIBRE GALLERY —AMMUNITION!—

The result of exhaustive experiments prove it to be the most reliable and accurate cartridge ever produced. It has been generally adopted by all the first-class galleries, and the best known marksmen have voluntarily testified to its superiority.

A Perfect Shelf Bracket

—MADE OF—

WROUGHT STEEL.

Light! Strong! Elegant!

PATENTED.

As a result of long and careful study and much experimenting we are able to offer the trade a

STEEL SHELF BRACKET

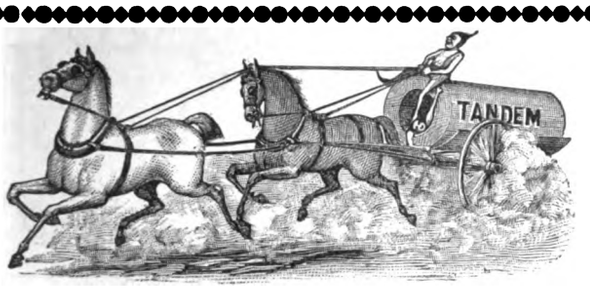
which is far superior to anything of the kind heretofore produced, and which we believe to be a

PERFECT ARTICLE!

We base our faith in these assertions on the following points of

SUPERIORITY:

1.—The use of the **arched** or **angle** forms of steel in the wall and shelf plates, which gives **much more strength** with less metal than if made flat.



2.—The **Corrugation** of the brace, which renders it secure against buckling or bending sideways under the severest strain.

The application of these principles makes a **Light, but very Strong Bracket.**

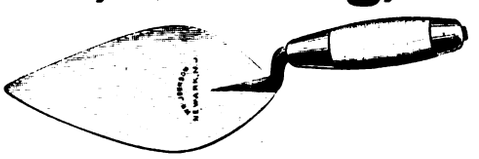
Continuous Roofing Tin.

CONSIDER EVERYTHING and see if you don't find it cheaper and better to use "TANDEM" than to use any other equal grade of roofing

It is easier to lay than ordinary roofing and it makes a better roof.

Our "TANDEM" is made in sheets 20 and 28 inches wide and 96 inches long. The seams are locked together, end to end, making a straight continuous course containing 100 square feet. The seams are soaked on both sides during the coating process, and are as strong and impenetrable as the solid sheet. Such courses are particularly useful in gutters and valleys.

It is ready to use the moment you unroll it. No re squaring, no trouble, no lost time, no waste tin. Every inch of it goes directly on the roof in absolutely straight courses.



It affords a saving of labor and solder. A square of it will cover more roof than a square of 20x28 loose sheets. These are the reasons why every roofer should use it.

There are other points worth considering: (1) While all the plates are full weight (I C thickness), the shipping weight of a square of "TANDEM" is less than that the same quantity of 20x28 sheets. (2) We can ship direct to where the goods are to be used. If you're working away from home this saves freight charges, double handling, and time If you care to know more about "TANDEM" CONTINUOUS ROOFING TIN write us. Prompt shipments can now be made

The new tariff on anvils and chains has reduced the price of those articles three-quarters of a cent per pound. It, however, admits a greater variety of goods than before, the new schedule favoring this change in affairs.

Business Disturbances and Politics.

The question has once more arisen: "Why should what is going on in the political world affect the man of business affairs?" It is, and ever has been, one difficult to answer. The first result of mooted change in governmental authority, is a disturbance in finances. Trouble in Argentina, the health of the Czar of Russia, the assassination of the president of France, are events which are used by speculators to depress the securities of the world. The public press, in its eagerness to obtain news, and that quickly, generally exaggerates the probable results of the event; and, as the fears of man are three times greater than his hopes, a fever of mild or greater alarm spreads throughout the business and financial world.

In the United States, it is the fear that a change would upset the financial policy of the government, and that a disturbance in values would take place which, in their readjustment, would affect everyone, from the day laborer to the millionaire. Take, for instance, the change in the last administration. Immediately upon the result of the election being known, values began to shrink; then the agitation for the repeal of the Silver Bill came along, and, that settled, it was confidently predicted that the panacea for our woes would be found. But it was not so. The tariff legislation came to the front, and everything stopped. That was settled, and a spurt of activity sprung up, to be partly dissipated until the result of the autumn elections shall be known.

We believe, however, as a Chambers Street merchant put it the other day, that "these causes are more apparent than real; they are more or less excuses for the present state of business." The man who never thinks, and that other who is too busy to think, see a bad state of business, and vaguely ascribe it without properly analyzing the cause, to almost anything that may be happening in the political world.

The truth of the matter is that other forces are at work more potent than those of a political nature. A quarter of a century ago the great cry was 'Go West, young man," and in consequence the production of wheat was increased so largely that now prices are so low as to be almost ruinous. Manufacturers, in their turn, have been stimulated to the extent that home consumption is not equal to the task of absorbing the product, and export markets have to be found. Of course, to do this, prices have to be reduced to a point that the outside world will be willing to meet.

Happily, this process is about completed, and the mechanic is again becoming busy. He may not be doing in amount of wages as well as he did ten years ago, but he is eating fifty-cent wheat, and his clothing costs him very much less; and, outside the matter of rent, he is doing much better in every purchase he may make. He is again getting a little money ahead, and will soon buy a few luxuries. Thus he sets another man to work, and in this way one wheel in the economical world starts a second and third, and soon everything that occurs in the political world will be used as an excuse for the prosperity that is bound to succeed the late depression.

The Associated Ohio Hardwaremen.

The movement which found its inception in the Hardware Club of New York is spreading onward and outward, with results of a most encouraging and beneficial character. We have from time to time noted the organization of Hardwaremen into bodies, the purpose of which is better acquaintance among those engaged in this great line

Digitized by Google

of industry, and the securing for the trade of such benefits as must of necessity come from compact and effective organization. The latest report comes from the great State of Ohio, where, at the capital city on October 10th, was formed the Ohio Hardware Association. Elsewhere we are pleased to give the details of this organization, the list of officers, constitution, etc. A series of resolutions prepared and sent forth in the name of the new organization, which are also given, furnish the foundations upon which the organization is erected. Section 2 tells the whole story in a nutshell, where it is stated that "the object of this association shall be to promote the interests of all and to secure the friendly co-operation of Hardware dealers." The movement has already sufficiently advanced to insure its success, and as the Ohio Hardwaremen are in the habit of accomplishing whatever they undertake, we certainly expect to see the membership increased rapidly, and that the next annual meeting will see each of the eighty-eight counties of the great Buckeye State adequately represented. We desire to congratulate the trade of our great sister State, and to hope that the expectations so fully stated at the gathering at Columbus will be more than realized.

The Charles Parker Co., Meriden, Conn., with New York salesrooms at No. 97 Chambers Street, feel that in their new Oil Heaters some points have been covered which are of prime importance in an article of this character. They have paid great attention to necessary details, obviating, as they claim, the giving off of offensive odors, and the liability of becoming heated to a dangerous degree. In offering this line to the public, the company maintain that they have produced an article that amply sustains their high reputation for good goods. They add that these articles "combine in a marked degree beauty in design, excellence of finish and superior workmanship." They are powerful heaters and are fully warranted in every respect. Further details as to prices, etc., can be obtained by application to either their Meriden or New York offices.

The diagram of the spaces for exhibitors at the Bicycle Exposition to be had at the Madison Square Garden in January, has been published and is being distributed. The aggregate of the rentals will amount to over $60,000. The committee in charge of the space for the Sportsmen's Exhibition claim the aggregate of their rentals will be far less, approximately $20,000. This latter exposition will, as is well known, take place in the Madison Square Garden. The spaces in the latter exposition vary from sixty to two hundred and fifty feet, but these can be sub-divided at the will of the exhibitor into eighths and quarters.

The Reading Hardware Exchange is an organization of the Hardware establishments of Reading, Pa. It has recently come into being, and has for its object those beneficial purposes which hold in the case of all of the Hardware associations recently formed, and among these the promotion of an acquaintance within the trade holds a prominent place. The officers of the Exchange are: President, D. D. Lerch, of Bright & Lerch; secretary and treasurer, George Bard, of Bard, Reber & Co., and secretary of prices, Aaron Stein, of the Stichter Hardware Co.

The Putnam Nail Co., Boston, Mass., on the evening of October 10th, tendered a complimentary banquet to the Master Horseshoers' National Protective Association. It was given at the Quincy House in Boston, and was in every respect an enjoyable and successful affair.

Manufacturers of tacks report that trade keeps up well, quite equal to that of previous seasons, the volume of orders being very satisfactory.

New Members of Hardware Club.

The following gentlemen have been unanimously elected members of the Hardware Club since our last report:

Benjamin Atha, Newark, N. J.

Charles B. Clark, Wallace & Sons.

F. W. Coolbaugh, No. 256 Broadway.

Esek Cowen, No. 253 Broadway.

Charles F. Droste, No. 74 Warren Street.

W. R. Eliot, Meriden, Conn.

Charles A. Holbrook, Edward Miller & Co., No. 10 College Place.

Fred. L. Stellwagen, Reading Hardware Co., No. 76–96 Reade Street.

George A. Wies, Eureka Fire Hose Co.

Increase of Stock of the Stanley Works.

The stockholders of the Stanley Works, New Britain, Conn., held a special meeting October 9th, and voted to increase the capital stock of the company from $400,000 to $500 000. This corporation had its inceptian in a comparatively small manufacturing business established by Frederick T. Stanley in 1842. From this a joint corporation was formed in 1852, with a capital of $30,000. The business grew continuously, with necessary additions to the capital stock, and in 1871 a large factory was built. Again and again additions to the plant were made, and now the frontage of the factory is over five hundred feet, and the building is five stories high. While the products of the factory find a ready sale in every part of the United States and Canada, a good export business has been built up with Mexico, South America, China, Japan and Australia. The officers of the company are: William H. Hart, president and treasurer; Peter McCartee, vice-president; L. Hoyt Pease, secretary, and George P. Hart, assistant manager.

After a Charter.

Application for a charter has been made by the Philadelphia Hardware Merchants & Manufacturers' Association, William W. Supplee, president; Samuel Disston, vice-president; T. James Fernley, secretary and treasurer. The following are managers: Charles M. Biddle, John R. Griffith, Hugh McCaffrey, Charles M. Ghriskey, Fayette R. Plumb and Elmer E. Brown. The following resolutions have been sent the Philadelphia councils by the Association: "*Whereas*, The introduction of rapid street car service at grade without fenders is a great menace to life; and *Whereas*, We have frequent accounts of some fatal accident; therefore be it *Resolved*, That we urge upon councils the necessity of taking prompt action compelling railway companies to equip their cars with suitable fenders."

The Cleveland Twist Drill Co., Cleveland, Ohio, take no small pride in quoting to their friends the award granted them for the exhibit at the World's Fair: "Most Extensive Exhibit and Greatest Variety of well made Twist Drills, exhibited as they are manufactured and furnished to the trade. The workmanship on all of these Drills is of the highest order, and especially meritorious are the Twist Drills in Millimeter diameters."

Moore & Booth, whose extensive steam planing and moulding mill is located on Mason and Myrtle Streets, Taunton, Mass., have opened at No. 23 Cohannet Street, in the same city, a retail store, for the sale of builders' Hardware, house finishing goods, mouldings, mantels, and the products of their mills generally.

Hanlon Bros., of Medina, N. Y., Hardware dealers, own what is claimed to be the most expensive stove in the world. It is gold plated and cost $960. This stove was exhibited at the World's Fair. Does anyone know of a costlier?

Taking the New England Hardware manufacturers as a body, and we find the gratifying fact that they are already doing sixty per cent. of the business of normal times.

Digitized by Google

Peter McCartee.

AN HONORED AND PROMINENT REPRESENTATIVE OF THE HARDWARE TRADE.

The portrait presented upon this page to-day would be recognized by a large portion of the trade, were no name whatever attached to it. For nearly half a century, as boy and man, Peter McCartee, of the Stanley Works, has been a conspicuous figure in the Hardware trade of New York City, and his acquaintance in that trade is bounded only by the boundaries of our country. Of his qualities it is hardly necessary to speak at length. The affectionate friendship in which he is held by everybody, answers all the questions that might be asked upon that point.

Mr. McCartee was born in New York City, and with the exception of a short period of time, has spent his entire life in this city. The family of which he is a part, has been long and favorably known in America, his ancestors upon his father's side having come from Scotland to New York City about 1750; and those upon his mother's side also came from Scotland some forty years later.

Mr. McCartee commenced his business career in March, 1848, being employed as a boy in the Hardware store of Wetmore & Co., who were located on the corner of Vesey and Washington Streets in this city, and who handled all forms of Hardware, iron and steel He there spent three years in active and arduous labors, as the clerks in those days were compelled to work from six in the morning until seven in the evening, or later; and it was considered a part of a liberal business education for a youth that his duties should combine severe physical labor in the handling and delivery of goods, with such mental discipline as might be crowded into the hours named. As his father, who was a minister, became pastor of a church in Newburgh, N. Y., the boy accompanied him to that city at the end of the three years, and obtained a position in the Hardware store of John K. Lawson, situated on Water Street. He remained three years there as a clerk, and in 1853 returned to this city, where he accepted a position with Cornells & Willis, at No. 36 Cortlandt Street. They were Hardware jobbers, doing a large Southern and Western business. His position was that of clerk, and buyer for the stock of American Hardware. In 1857, Mr. McCartee, as a matter of business promotion, commenced his connection with the Stanley Works as their New York agent—a connection which has continued with confidence and esteem upon both sides for over a third of a century. In addition to representing the Stanley Works as their New York agent, he also represented an association of manufacturers from Connecticut, among whom were Hall & Knapp and A. Stanley & Co., who were afterward consolidated and are now known as the Stanley Rule & Level Co.; Landers & Smith, who are now known to the cutlery world as Landers, Frary & Clark; and Roys & Wilcox, manufacturers of tinsmiths' tools and machines, who are now known as the Peck, Stow & Wilcox Co., and Humason & Beckley, who are now the Humason & Beckley Mfg. Co. He also represented Sheble & Fisher, of Philadelphia, whom he still continues to represent as Sheble & Klemm.

Mr. McCartee continued with most of these concerns until about 1868, when he gave practically his entire time to his position in connection with the Stanley Works. He became a stockholder thereof prior to 1860, and some six or eight years ago was elected vice-president, which honorable position he yet holds. It is needless to say to those who know Mr. McCartee that he has given his whole time and attention to the business duties imposed upon him, and that most effective results have followed his labors; and in New York City the name of the Stanley Works and Peter McCartee are regarded as synonymous terms.

Mr. McCartee has ever been enthusiastic and industrious in advancing any movement which had for its purpose the improvement and elevation of the Hardware trade. When the idea of the great Hardware dinner of 1892 was proposed, he was made a member of the dinner committee, and labored in season and out, to secure the great success which attended that effort, as he also did in connection with the dinner of the year following, and he had the honor of presiding at a table upon both of these occasions. When the idea of the New York Hardware Club grew out of these dinners, he turned in loyally and did everything in his power to place it upon a sure foundation, and to insure its success from the very beginning. He was elected a member of the original board of governors, and has been a member of said board continuously since. When the House Committee was formed he was appointed chairman of the same. Few have any idea of the immense amount of labor performed by this committee, in the fitting up and furnishing of the club rooms; the securing of help; the making of contracts, and the carrying to a perfected completeness of the thousand and one things which pertain to an enterprise of that character. Mr. McCartee's personal impress has been made for all time upon the club by his labors in that position, and the good judgment and artistic taste shown by him and his associates in the selection of carpets, furniture, adornments, etc., are patent to anybody who visits the club room. After the work of furnishing the club room was practically done and the contracts given out, Mr. McCartee, who was then in ill-health, from which we are glad to say he has recovered, felt that he had earned a period of rest, and much against the wishes of his associates upon the committee and the members of the board, he was permitted to resign from those labors and was succeeded by Eugene Bissell. Mr. McCartee is still doing excellent work as chairman of the committee on admissions, which position he has held from the beginning of the club.

Mr. McCartee lives in Brooklyn, where he has resided since 1853, and has for years been a recognized part of the social life of that city. He is connected with the Church of the Pilgrims the pastor of which is the famous Dr. Storrs. In all his relations of life, as in those of business, Mr. McCartee has been guided by high principles, a just view of things and a desire to do his whole duty to every trust committed to his hands. In

these later years he is still as active as in the beginning, and there are few men to-day prominent in the Hardware world, who command the love, respect and confidence of all who know him in as high a degree as does the modest gentleman, who will be surprised beyond measure to discover himself embalmed in Hardware history in the above brief and inadequate sketch.

Ohio Hardware Association.

On October 10th, at a meeting held in Columbus, Ohio, the Ohio Hardware Association was formed. Thirty-four counties of the State were represented, and the proceedings were of a nature to give great encouragement to the originators of this movement. The following officers were elected:

President, T. J. Morris, the W. K. Boone Co., Lima, Ohio.

Vice-president, F. M. Bashore, Paulding, Ohio.

Secretary and treasurer, Theodore Butler, the Standard Hardware Co., Akron, Ohio.

Members of Executive Committee, J. H. Kauke, Van Wert, Ohio; F. Haberman, Marion, Ohio.

The purpose of the organization is set forth in the subjoined preamble and resolutions which were adopted, and in the newly-adopted constitution which follows the same:

At a preliminary meeting of Hardware dealers, held at Columbus, Ohio, on the above date, an organization was perfected, called "The Ohio Hardware Association."

The need of organized effort to protect ourselves from inroads of manufacturers and jobbers, and to promote a general feeling of confidence is fully recognized.

Resolved, That we demand of manufacturers and jobbers that they confine the sale of their wares to regular dealers and that each and every member of this Association pledge himself to use all reasonable efforts to enforce this demand.

Resolved, That if any manufacturer or jobber furnish goods to anyone not regularly engaged in the retail trade, the dealers affected shall report the same to the Secretary, with affidavits or other proper proofs. The Secretary shall then correspond with the offending manufacturer or jobber, and endeavor to adjust the matter, and in the event of failure to so adjust a complaint, where the evidence is conclusive, the Secretary shall report the facts in the case to the members of the Association.

Resolved, That a cordial invitation is hereby extended to all regular and legitimate Hardware dealers to join with us in this Association, and that they send to the Secretary the amount of dues for one year, and receive their certificate of membership.

Columbus, Ohio, October 10, 1894.

CONSTITUTION.

ARTICLE I.

SECTION 1. The title of this organization shall be "The Ohio Hardware Association."

SEC. 2. The object of this Association shall be to promote the interests of and secure the friendly co-operation of Hardware dealers.

ARTICLE II.—QUALIFICATION FOR MEMBERSHIP

Any person or firm who is engaged in the Hardware business, is in good standing, and carrying a general assortment of stock, may become a member of this Association by subscribing to the Constitution and paying the annual dues prescribed by By-Laws.

ARTICLE III.—OFFICERS.

The officers shall consist of a President, a Vice-President, a Secretary and a Treasurer, which officers, with two other members of the Association, are the "Executive Committee."

ARTICLE IV.—ELECTION AND DUTIES OF OFFICERS.

SECTION 1. The President, Vice-President, Secretary and Treasurer, and the two other members of the Executive Committee, shall be elected annually, by ballot, each firm to have one vote.

SEC. 2. In case of a vacancy in any of the offices of this Association, the same shall be filled by appointment by the President, until the next annual meeting.

SEC. 3. It shall be the duty of the President, or in case of his inability to serve, of the Vice-President, to exercise supervisory control over the affairs of the Association, and to carry out and enforce all measures adopted by the Association calculated to improve the condition of the Hardware business.

ARTICLE V.—MEETINGS.

The regular meeting of this Association shall be held annually, on the second Wednesday of February, or as often as may be designated by the Association. The Executive Committee is subject to the call of the President.

ARTICLE VI.—AMENDMENTS.

Amendments to the Constitution may be made at any regular meeting by the vote of at least two-thirds of the members present. Thirty days' notice shall be given to the members of any proposed change in the Constitution or By-Laws.

ARTICLE VII.—AUDITING COMMITTEE.

An Auditing Committee of three shall be appointed the first day of each annual meeting, which shall examine the books of the Treasurer and report their condition to the Association.

BY-LAWS.

SECTION 1. The admission fee to membership shall be $3, in advance, which fee shall cover all dues for the first year. Each firm shall pay for current expenses thereafter $3 annually; payable at regular meeting.

SEC. 2. Ten members at any meeting shall constitute a quorum.

SEC. 3. Each firm shall have one vote.

Prepare for the Clipping Season.

The Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York, have had produced, at great expense, elaborate illustrations on a large scale, suitable for show cards, which may be used by their customers to great advantage. These illustrations of the different machines sold by this company are very large in size—about seven by ten inches. They supply printed show cards from these large cuts, which show the Hand Power, Bicycle, Steam or Electric Power machines, on a large scale, on colored card board, with name and address of the parties ordering cards at the rate of $5 per hundred. These cards are suitable to tack up in stables, blacksmith shops, fences and any other conspicuous place as an advertisement of their business. Business cards are also supplied of ordinary size at the rate of $5 per thousand, or $3.50 for five hundred, with any desired reading matter. There is nothing that will promote the interests of the business of horse clippers so well as that of advertising. Send for large illustrated sheet, showing the different designs, which is sent free to all the users of the Gillette Clipping Machine. Also send for catalogue, which beautifully illustrates everything in their line. Now is the time to prepare for the clipping season, which will continue until about May 1, 1895.

Price List on Screwdrivers.

William Johnson, Hedenberg Works, Newark, N. J., has issued a new Price List of his Screwdrivers, as follows:

The attention of the Hardware trade is called to the extensive line of first-class forged steel Screwdrivers shown on this price sheet. Our long experience enables us to produce articles of superior quality. They are all carefully tested and are guaranteed. We make our own handles.

List No.	13.	A. Flat Blade	Discount per cent.,			70&10
" "	135½.	" " Extra	"	"		70
" "	138.	" " Ebonized Handle	"	"		70
" "	140½.	Round Blade, Flat Handle	"	"		70
" "	142½.	" " " Ebonized Handle.	"	"		70
" "	141½.	" " Ideal	"	"		75
" "	141.	" " Extra	"	"		70&10
" "	142.	" " " Ebonized handle.	"	"		70
" "	143 & 44.	Rosewood Handle	"	"		40
" "	143 & 144.	Ebonized "	"	"		60
" "	143 & 144.	Rosewood Finish Handle	"	"		60
" "	14 .	Handles.	"	"		50
" "	148	Sewing Machine	"	"		70
" "	50	" "	"	"		60

All Screwdrivers can have handles riveted on at an extra cost added to the net price of each.

For plain handles	per dozen,	25 cents
For ebonized and rosewood finish handles	"	30 "

Rogers & Hamilton, Waterbury, Conn., furnished the silverware used in the New York Hardware Club, a fact which has been pleasantly impressed upon the minds of all who have had the pleasure of dining in that well-known headquarters of the Hardware trade. Several gentlemen have been so struck with the quality of that ware that they have successfully negotiated with the company for purchases for their own use. This speaks well not only for the character of goods manufactured by the company, but for the artistic eye and good judgment of the gentlemen named.

The Charles Parker Co. have on exhibition in their office on Chambers street, their new Oil Stove. As an evidence of the intense volume of caloric radiated from this heater, Mr. Bernard is said to be open for proposal for an electrical fan plant, to counteract its over-heating effects.

HARDWARE costs only One Dollar a year.

Six Letters To a Clerk.—V.

TELLING TALES OUT OF SCHOOL

One of my friends in the wholesale trade came to me as I was about to start on a trip selling goods, saying: "You can do me a favor, if you will; I constantly hear it said that I am selling a great many 'seconds,' and I find it is damaging my trade. If it was told by my competitors I could fight against it, but, somehow, it sticks too well for a mere trade story. When you get among any retailers who have bought of me, I wish you would feel around, and if they have heard any such tales, try and learn how they first came to them, and you will do me a favor."

I promised to oblige him, but was in danger of forgetting it, until one day I overheard a merchant talking to a drummer. The merchant answered a remark I had not heard, observing: "Your price is high; So-and-so offered the goods for less." "Pooh," said the salesman, "you know the goods that he sells; *we* don't deal in seconds." When it came my turn to do a little drumming, I finished my own business, and then I began to enquire on my friend's account. I asked:

"You buy some goods of 'So-and-so?'"

"Oh, yes; but not many."

"Isn't he on the square?"

"To tell the truth, I never had anything from him that was not all right, but I believe he handles a good many seconds, and I don't care to get any."

I professed surprise at this, saying I knew him to be a shrewd merchant, much too shrewd to sell seconds for firsts.

"Well," said my customer, "I didn't take much stock in it at first, but his own traveling man admitted it, and I conclude it is true."

I dropped the matter, but when I had opportunity again I examined others and found the same answer, that So-and-so's traveling man had admitted it.

My friend was much surprised when I told him who was authority for the stories circulating among the trade, but he satisfied himself of the truth of it and promptly discharged the man. Now, the truth was, he had no more seconds in stock than other houses in his line carried, and what he bought for seconds he sold as such; but the salesman, having lost a customer by selling him seconds at the price of firsts, had found it convenient to tell of the incident so often that nearly all his cronies had heard of the story about the "seconds;" and when he was through telling the tale, all that his hearers remembered was that his house sold seconds. As I said, he lost his place, and could not get another in so responsible a position in the city.

Not long since I met the bookkeeper of a merchant who was in rather deep water, and whom a very slight push might push beyond any power to save. While we were talking, another man joined us, and, turning to the young man, asked:

"How is M. getting along in his affairs?"

"Ain't getting along at all," was the answer.

"Won't he pull through?"

"He thinks he will."

"What do you think?"

"I think it's six of one and half a dozen of another."

Within an hour the questioner had put his claim against M. into the hands of a lawyer. It was promptly brought before a justice, and before night it was known to several that M. had been sued. Now, notice how things had worked. M. had made arrangements with a banker to help him over the crisis, and the matter was to be closed the next morning at nine o'clock; but in the meantime M.'s clerk had said what he never ought to have said, brought his employer before the court, and frightened the banker from helping him. The merchant had to make an assignment.

Said a merchant to me while we were talking on this subject: "Boys will blab, and you cannot help it. I remember one of my clerks destroyed a very pretty trade I once had in a patent saw. I had no monopoly of it, except from the fact that none of my competitors kept it. I went to work quietly and built up quite a trade on it, a trade that paid me a couple of thousand dollars in the season. I cautioned my traveling men to talk about the saw only to our customers, and to do no outside bragging. But I overlooked my entry clerk; I didn't suppose he was going to go up and down the street telling of the saws we sold, but that is just what he did. He fancied it added to his importance to show that the house was doing a big trade, and so he kept up an admiring tale of our trade in saws, often telling this when among the clerks of my competitors. It was not long till I found the saw with the other houses, and then my sales and profits began to drop. That boy's boasting cost me $1500 a year."

"And what did you do with the boy?"

"At first I thought I'd ship him, but he was a pretty good boy, and I concluded it would be a lesson to him, so I kept him; he's been as dumb as an oyster ever since."

These are a few instances that I recall where clerks have damaged their employers by talking too much; but I am satisfied the amount of harm done yearly to merchants by just such work as this is incredibly large. What our competitors say of us does very little good or harm; it is taken for what it is worth, and abundant allowances made for business rivalry. But this is not the case when our own clerks speak against us. A miserable little rat often sinks a beautiful great ship, and a merchant's well laid plans are brought to naught because a babbling clerk mentions them where they are carried to the ears of his competitors.

I doubt if merchants realize the extent to which their business is talked over by the clerks when out of the store. And there are two kinds of talking clerks, one hears a great deal and tells nothing of importance, the other tells everything and learns nothing; he talks for the love of talking, because he does not know any better.

The proverb tells of silence being golden, but it is a great deal more than that, it is gold—the pure metal. There can never come any good from telling about the business or the plans. If other clerks are interested in your story at all, it is only because they are picking up items about your business that they carry to their employers.

I noticed one of my traveling men in very close conversation with a competitor's clerk, one day, and I began to feel uneasy about it, not knowing what might be said about our affairs before the conference broke up. But my man came to me with a smile of satisfaction, a while afterwards, saying, "I was pumping Charlie to find out where their traveling man is." "Did you learn?" "Yes; and I'm going out to-night to head him off." I didn't have much respect for the clerk who had told.

I confess I cannot understand how a clerk can go on blindly talking about his employer's business with people outside of his store. If a sharp thing has been done in the store they tell of it as if it in some way added to their reputation for smartness. At a social call, one evening, it chanced that two clerks of rival houses were together. One of them, when conversation flagged, told of an incident that was rather laughable, where one of their men had got an order from a retailer's by a very sharp dodge, and so interested was he in his own story that he gave names and locations. The other clerk had a good memory and told the story in his office the next day to, among others, the traveling man, who, in turn, made a minute of it in his mind, and, when next in the store of the man upon whom the dodge had been played, used the story to such advantage that he got an order, and the other man got—the door the next time he came there.

I overheard a conversation like this once between two clerks, who met just a few feet ahead of me:

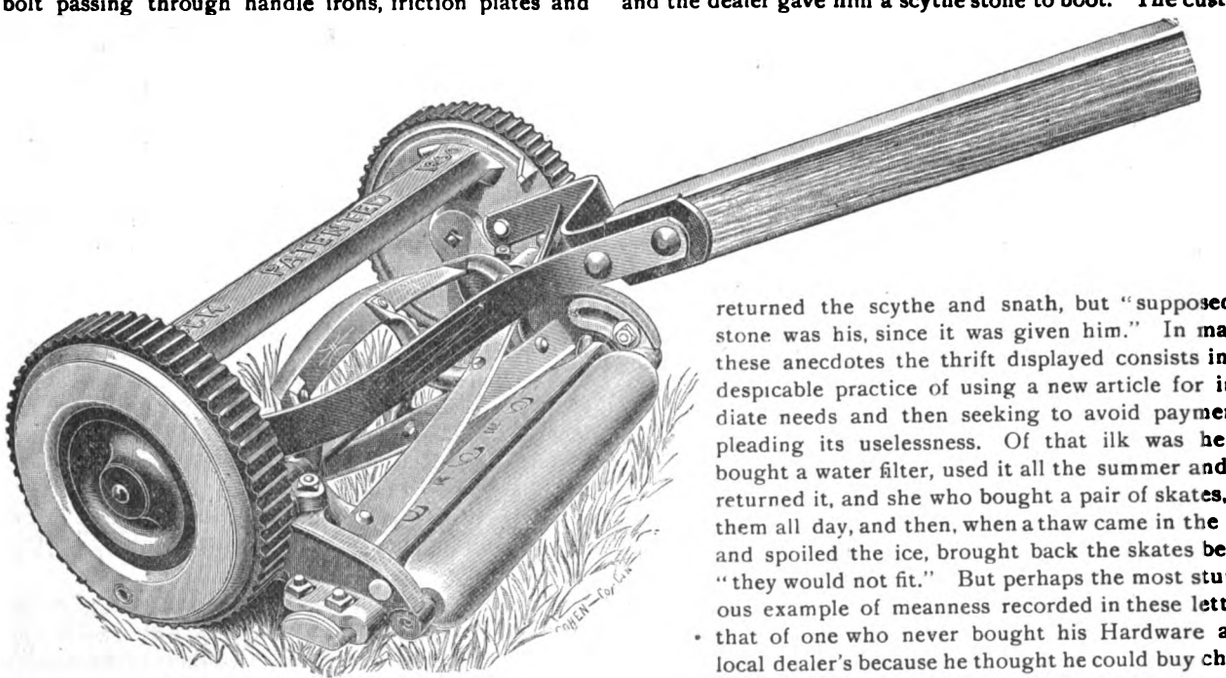
"How's trade, Jim?"

"Can't complain."

"Pho! that's what you always say."

"Well! Do you suppose if it was dull I'd say so?"

If I had known the boy I would have patted him on the back.



That merchants often let out secrets and damage their trade by boasting, I am well aware, but that is no excuse for the clerk; there is but one safe rule for him to follow, and that is to refuse to discuss business matters with anyone but the people belonging in the store with him, for he cannot know what advantage a competitor may get from some careless word dropped by him.

New York, October, 1894. AN OLD MERCHANT.

Improved Henley Lawn Mower.

Attention is called to the accompanying illustration of the improved Henley Lawn Mower, made by the well-known manufacturer, M. C. Henley, Richmond, Ind. This Lawn Mower has won its place as a first-class, high grade machine, on its merits, and with recent improvements covered by patents lately issued, it is claimed by the manufacturer to be "one of the very best, most effective and desirable machines on the market." It is described as follows: "The frame is made very strong and rigid by means of an iron bar, extending from one side to the other, having a bearing at each end 1¼x2½ inches, and bolted solid to the side plates. The cutter-bar and boxes for the reel shaft are adjustable to compensate for wear. One of the most important improvements recently made on this Lawn Mower is the bronze boxing for reel shafts, making the very best and most durable bearings, and increasing to greatest extent its easy and light running qualities. The ratchet is without question the most simple, effective and durable in use. The teeth of main wheel and pinions are made in very best form for wear, as well as for light and smooth running. The adjustment of the handle is an important feature of the machine, being arranged at lower end with metal lining on each side of wooden handle, forming a friction bearing for the handle irons, the upper bolt passing through handle irons, friction plates and handle, the lower bolt passing through handle irons only, at end of handle. By tightening these bolts, a sufficient amount of friction is obtained to hold the handles firmly at any angle desired, and when the friction is once adjusted, requires no further attention, and is instantly adjustable for a child or grown person. This new and improved construction of the handle renders the machine not only very valuable for general lawn mowing purposes, but also specially adapts it for mowing embankments. The reel and cutter-bar knives are made of crucible steel, and, in fact, only the very best material is used in the construction of this machine throughout, and the workmanship is first-class." It is neat, well finished, and symmetrical in its proportions and design, and, with the important points of merit and superiority, given herein, and the well-known, high grade character of Hardware, machinery, tools and implements heretofore made by him, warrants the manufacturer in thinking that in this Lawn Mower he has something of value and interest to the jobbing trade, and would be glad to quote prices, terms, etc., to any who may wish.

English Comment on American Mean Men

We have already mentioned that our contemporary, HARDWARE, of New York, has been stimulating its readers into a sort of competition as to who could cite from personal experience the most flagrant example of meanness in a customer. The last issue that has reached us contains some dozen letters from correspondents each offering one or more examples of depraved attempts to "play it very low" on the long suffering Hardwareman. This effort to cap the experiences of others with stories which hold up humanity in a contemptible light may be rather cynical, but we must confess that we have read them all and derived no little entertainment therefrom. Most of the stories are new to us and are doubtless genuine occurrences. It would hardly occur to anyone, we should say, to invent that incident of a customer, worth some £15,000, who wanted a single-hole spring mouse trap and when nothing smaller than a two-hole trap could be found in the shop, insisted upon having this sawed in two and so saved half the cost. "Thrift! Thrift! Horatio"—and most of these specimens, dubbed petty meanness, would doubtless, in the estimation of those guilty of them, be regarded in a spirit of pride as evidences of a prudent and saving disposition. There was one man who bought a pair of shears for shearing mules and said if they suited him he would buy them. He brought them back the same evening and said they were "no good." Then came his brother and wanted a pair "just like Joe's," saying he had helped shear all Joe's mules and "they were the best shears he ever saw." He got the pair Joe had bought and returned when the job was finished. Another bought a scythe and snath and the dealer gave him a scythe stone to boot. The customer returned the scythe and snath, but "supposed the stone was his, since it was given him." In many of these anecdotes the thrift displayed consists in that despicable practice of using a new article for immediate needs and then seeking to avoid payment by pleading its uselessness. Of that ilk was he who bought a water filter, used it all the summer and then returned it, and she who bought a pair of skates, used them all day, and then, when a thaw came in the night and spoiled the ice, brought back the skates because "they would not fit." But perhaps the most stupendous example of meanness recorded in these letters is that of one who never bought his Hardware at the local dealer's because he thought he could buy cheaper at a neighboring town. Happening, however, to want some nails in a hurry, he went to the local dealer and *borrowed* a pound of nails until he could go to the town and buy some to replace them.—*The Hardwareman* (*London, Eng.*)

Railway purchasing agents are again coming into the market for supplies. The depression has caused with railroads a severe economy, and old material has been used up very rigidly, but the end to such a policy could not be forever postponed. Railway Hardware is a feature with many houses, and such have been rather dull within the past year. This description of Hardware is of the most substantial character, and it is difficult for the manufacturer who makes it a specialty to turn his attention to any correlative line.

A new development in builders' Hardware is in stamped up or embossed work, the process being to make the articles with a die out of sheel metal, applying the improvement to articles of steel and the higher grades of builders' Hardware. This process makes it much cheaper than cast work, and also admits of a very broad, free treatment of design. The articles made of it are very showy, and at the same time durable.

The meanest man on record lives in Manayunk. The neighbors say that if the ocean was all cologne, and he owned it, he wouldn't give away a scent.—*Philadelphia Record.*

He Stole the Gun.

It is not all fun and placid peace even in a Philadelphia Hardware store. So Christian Kull, Richmond and Ann Streets, discovered some evenings since. A yonng man named Daniel, alias "Skinks" Shields, entered the store about eight o'clock. He asked to see some revolvers and cartridges; examined several of them, and selecting one of the best, loaded it up on the pretense of seeing if the cartridges were a good fit.

Suddenly he pointed the weapon at Mr. Kull's head and exclaimed:

"Now, you Dutchman, I got you just where I want you. I don't intend to pay for this pistol, see? If you follow me when I go out or raise any outcry, I'll come back and put a bullet through you."

He then went out of the store, Mr. Kull being so dumfounded that he made no movement until the cool thief had disappeared with the pistol and a box of cartridges.

He reported the matter to the police, but Shields had fled and no trace of him could be found. He was arrested, however, in the house of a sister, at Coral and Sergeant Streets. At a hearing he was committed to jail without bail. He lately got out of jail, where he served time for burglary.

E. E. Brown & Co.'s Sash Weights List.

E. E. Brown & Co., McKean and Meadow Streets, Philadelphia, have issued the following list covering their line of Sash Weights:

Upon our Hardwaremen's Exchange page, under the name "Chicago Agencies," appears an announcement that should interest all makers of Hardware specialties. A gentleman of business reputation, financial responsibility and a good sales man, is prepared to open a Chicago office on October 1st, and would like to hear from those who wish to send their goods into that field. A letter addressed "Chicago Agencies," care of this office, will be forwarded to him immediately.

We are informed that S. A. Haines, familiarly known as the "Parson," is to represent the Irwin Auger Bit Co., of Wilmington, Ohio, in the sale of their goods to the jobbing trade of this country. Mr. Haines, who has recently returned from Europe, is a member of the S. A. Haines Co. at Indianapolis, Ind., and probably as well or better known among the buyers of the Hardware jobbing trade than any man in this country.

The Kingston Hoe Factory, Kingston, Tenn., are putting in new machinery.

A Handsome "Alaska" Set.

The handsome stand and accompanying articles here shown are of the famous "Alaska"—"always cold"—manufactures of the Troy Nickel Works, Troy, N. Y. These goods are described

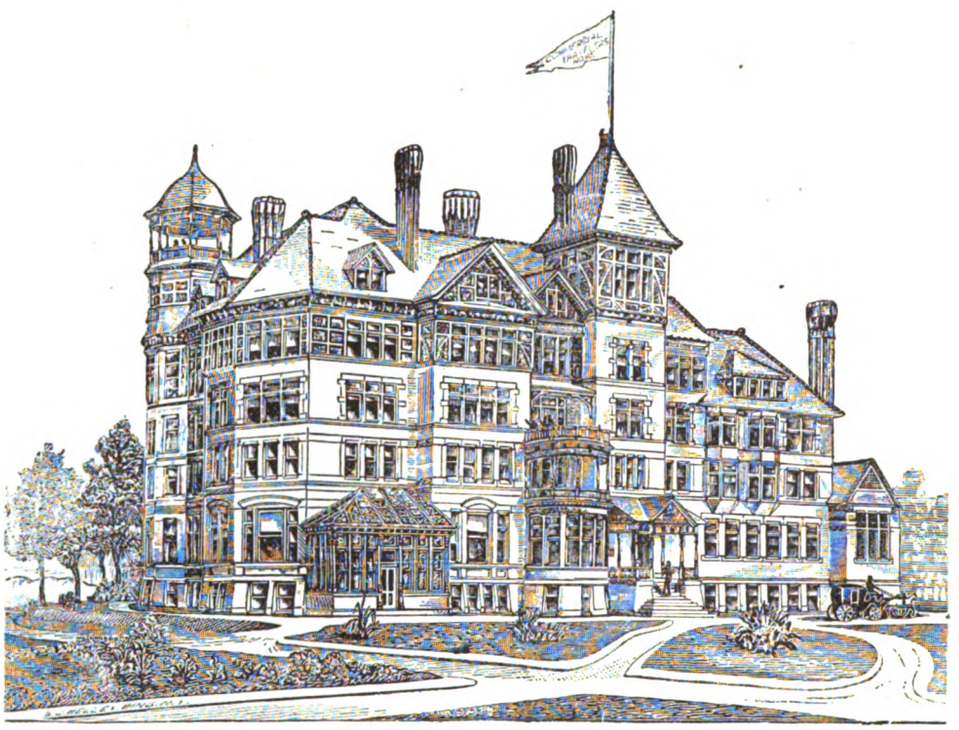
as strong and handsome; comprising, in the set here shown, a shovel, poker, tongs and lifter. These are all heavily nickel plated, "and are a great thing for any kitchen stove, as all good housekeepers have a place for everything, and everything in its place"—and this stand and set go together in the eternal fitness of things. It seems to us as though the collection would make an admirable present for the holidays, and wide-awake dealers might do well to investigate.

J. C. Emmett, a merchant of Liberty, Ind., has adopted a plan to prevent safe-blowers from using explosives to force an entrance into his safe. A card with the following inscription is posted on the safe: "Mr. Burglar, please do not break open or deface this safe. It contains books and papers valuable only to me. If you wish to see for yourself the combination is as follows: 46 back twice 73, forward once to 96, back to 51. If you open the safe please close and lock it for fear of fire." Mr. Emmett's safe has been blown open several times.

Does anyone but a tradesman care for a trades paper? Yes; if it is such an excellent paper as HARDWARE. So much Hardware is used in every household that it is profitable to keep posted on new inventions in that line. One dollar sent to HARDWARE, 143 Chambers Street, New York City, for a year's subscription, is money well expended.—*Co-Operation*, (*University Park, Col.*)

The Buerk Hardware Co., No. 134 Lake Street, Chicago, inform the Hardware and locksmith trade that they are putting in a complete line of locksmith and bell-hangers' supplies and material, such as key blanks, bells, gongs, electric bells, batteries, push buttons, wires, speaking tube, elbows, whistles, mouth pieces, etc. A complete catalogue of the same is now being compiled.

Fred. Treadway, of A. Treadway & Sons' Hardware Co., Dubuque, Iowa, was visiting friends on Chambers Street some days ago. He is one of those men whom it is a pleasure to meet, and representatives of Eastern manufacturers find it a matter of both pleasure and interest to call upon him when in Dubuque.



HARDWARE says there has been a vast improvement in axes in the past fifty years, but we can't make the woman who chops the kindling wood at our house appreciate her blessings in having an improved implement.—*Ansonia* (Conn.) *Sentinel.*

The Globe Gas Engine Co., Philadelphia, Pa., will erect a four story brick and iron factory building on Forty-ninth Street, which will cost $20,000.

Digitized by Google

Commercial Travelers' Home.

The 9th of October, 1894, will be long remembered by the commercial travelers of America, as upon that day was laid the corner-stone of the Home which is to be erected by their generosity and energy, through an organization known as the Commercial Travelers' Home Association of America. It is to be located in Binghamton, N. Y., and a view of the structure when complete is here given. It will command a view of the city and country for miles around; will cost, when completed, about $125,000, and will be five stories in height, with a basement. The prevailing style of architecture will be Parisian, with a blending of Renaissance. There will be a tower and an observatory. The interior walls will be constructed of brick and fireproof tile. The building will be fireproof, as no wood work will be used. On the first floor there will be a large concert hall, with stage for theatrical performances and entertainments, a lecture room, the secretary's office, reception room, reading room, library and conservatory. The second and third floors will be adapted for dormitories, fifty-two in number. The fourth floor will contain the dining-room and a children's breakfast room. It is expected to be ready for occupancy a year from next December. The object of the Commercial Travelers' Home Association of America is to provide and maintain a home and hospital for the care, maintenance and relief of indigent commercial travelers, their dependent wives, widows and infant children, and to build, furnish and maintain in connection therewith a school for the benefit of said infants and to provide and furnish such other and further aid and assistance to the members thereof and their families as may be provided by the by-laws.

COMMERCIAL TRAVELERS' HOME, BINGHAMTON, N Y.

The corner-stone laying was witnessed by thousands of the commercial travelers from all parts of the country, and was attended by speeches, a parade, and other ceremonies incident to an event of that character. The history and the future of this grand endeavor were touched upon by the president of the association, James B. Aldrich, Detroit, Mich., when he said: "As my eyes travel over this sea of faces I cannot help but contrast this scene with that of scarcely three years ago, when a little band of zealous, generous, broad minded commercial travelers were struggling to disseminate the principle incorporated in our constitution and by-laws and awaken a sentiment within our fraternity to carry out the same. With the reward of the past effort so completely in evidence to-day it should stimulate us to renewed zeal in the noble work in which we are enlisted. This home, the corner-stone of which we lay to-day, is but a beginning. Our labors will not have been completed until by its side a hospital is erected, a school established and we are able to support in comfort the indigent of our fraternity, bind up the wounds of our suffering members and educate the orphaned children, fitting them to become va'uable acquisitions to the social and business world."

Smokeless Powder.

Von Lengerke & Detmold, No. 8 Murray Street, New York, established themselves in business in 1882, and have since been closely connected with the introduction of smokeless powders into this country. They became agents for the pioneer nitro-powder manufacturers of this country; but as the company they represented came to grief through explosions—ten in two months—the sheriff, etc.; they severed their connection therewith.

Then the Schultz Powder Co., of England, sent a representative to America to secure the firm of whom we are speaking as agents, and the latter consenting, a very large demand was created, the product being sold in large quantities. The success of the Schultz Co. impelled their then only rivals to send over a representative to America, who secured the services of Von Lengerke & Detmold, and a factory in this country was built. While this was being done, the E. C. people of England also secured the services of the American firm, and the two well-known powders were handled side by side.

Recently the New York firm have received the agency for a new nitro-powder, which is claimed to be excellent in efficiency. It was brought out by Wuolf & Co., of Germany, and called what is now well-known as the Walsrode, and is very popular with shooters all over the country, large quantities having been sent so far west as Colorado and California. Each of the powders mentioned above has received the test of the shooting fraternity, and Hardware dealers can hardly make a mistake in handling them for the benefit of their customers.

Recent Incorporations.

Decatur, Ill.—Economy Gas Stove Co.; capital stock, $5000. Incorporators, Gustavos Heidel, Henry D. Mathews, Albert Mathews and J. C. Hostetter.

New York, N. Y.—Ridgeway Lock Co. To manufacture and sell locks and other Hardware. Capital, $50,000. Directors, Alfred Hodge, Joseph E. Seaton and William Seaton, Jr., New York City.

Indianapolis, Ind.—C. Broeking Co., Hardware. Incorporated with a capital stock of $15,000.

The Latest Catalogues.

The Herbrand Co., Fremont, Ohio, for whom David Eastman, No. 64 Reade Street, New York, is agent, have issued a catalogue of their razors and strops, which is more than usually well illustrated, their razors and strops being placed in groups, in beautiful half-tone. The company claim that the steel in these razors is the best that can be made, and is specially prepared for their use. Each blade is hand forged and separately tempered with the utmost care, by a special process of their own, thereby securing, as they claim, "a finer cutting edge than has ever been before produced." Among some of their specialties are the razors with aluminum handles, with an alloy of silver in them, sufficient to give a nice finish. Many of the numbers are specially for barbers' use, and one line, in compliment to politics, is named familiarly "McKinley." A safety razor is among the numbers. A full line of razor strops, both single leather and combination, is given and illustrated, which includes the German Belt, Double Flat and Cushion combination. The line is very complete, both in razors and strops, and the catalogue itself is a good illustration of what the printer can do.

The Star Brass Mfg. Co., No. 33 Lancaster Street, Boston, Mass., with branches in Chicago and San Francisco, have issued a handsome and neat catalogue of their pressure and vacuum gauges for all purposes; stationary, portable and machine pop safety valves, and steam engine and boiler appliances in general. This catalogue is bound in heavy boards with gilt lettering, and contains near two hundred pages of illustrated descriptions of their line of goods. Aside from the catalogue features, may be found several pages devoted to useful information on physical and mechanical elements, constructions and results. In a note of introduction the company say that the "importance now attached by steam users and the public in general to the production and selection of steam appliances whose performance and indication must be absolutely reliable, has impelled us to use nothing but the very best of material and the employment of the most skillful workmen in their production."

Page, Dennis & Co., No. 325 Broadway, New York, have issued a comprehensive catalogue of some seventy-five pages, which is very thoroughly illustrated and contains detailed descriptions of the large line of goods which they carry. Among those mentioned are: Howe scales, Bedford scales, Howe trucks and barrows, Howe letter copying presses, Alaska refrigerators, National refrigerators, American refrigerators, Alarm cash drawers and registers, etc. A complete index of discounts, etc., is furnished, and in an opening note they state that all their goods are specially packed for export with care, in compact shape, and minimum weight consistent with safe packing. The catalogue will be sent upon application.

Tom Moore, No. 1367 Broadway, Brooklyn, N. Y., with a branch office in the *World* Building, New York city, has issued a very handsome and artistic catalogue of metal work for burial vaults, which he has dedicated "to my friends the architects of the United States." The work is very thoroughly illustrated, printed upon heavy calendered paper, and shows at a glance, for the benefit of any builder or architect, the various specimens in this line of goods manufactured by Mr. Moore. These include vault doors, gates, grilles, memorial tablets, etc., etc. In sending for this, inquiry should be made for Catalogue B.

The Knapp & Pratt Mfg. Co., Geneva, Ohio, manufacturers of housekeepers' Hardware, Hardware specialties, floral, garden and farming tools, have issued an illustrated price list under date of September 1st, consisting of thirty-two pages. The list comprises spoons, meat and kitchen forks, mincing knives of all descriptions, cake turners, can openers, carpet stretchers, ice picks, ice chisels, tack hammers, claws, shingling hatchets, clothes line hooks, box scrapers, saw handles, floral tools, rakes and hoes. George P. Benjamin, No. 104 Chambers Street, New York, is agent for these goods.

The Boston Belting Co., Boston and New York, have issued an illustrated catalogue and price list of their fire hose. It is printed in colors and handsomely bound, with their trade mark in bronze upon the front cover. All varieties of hose and hose fixtures, including pipes, racks, etc., are shown in this little book, which is in reality a hand-book of useful information for dealers in fire goods or for any interested in fire departments. It will be sent upon application.

The American Curry Comb Co., Troy, N. Y., which comprises the Sweet & Clark Co., the Southington Cutlery Co., the New York Stamping Co., William P. Kellogg and E. Hills, have issued a revised price list under date of October 15, 1894. In this list there are only two changes, being for numbers 78 and 78½, in which the difference is slight. Fuller Bros., No. 33 Chambers Street, are the New York agents for this company.

The Rogers & Hamilton Co., Waterbury, Conn., have issued a pocket edition of their 1894 standard price list of Silver Plated Flat Ware. This is the third edition of this valuable work. It is printed upon heavy paper, fully illustrated, and so indexed that any variety of goods can be found at a glance. It contains 118 pages, is bound in heavy cover, and has as a frontispiece, a view of the company's extensive works.

The Miner & Peck Mfg. Co., New Haven, Conn., have issued their supplement No. 3, describing their friction drop hammer and blast forges for drop forging. Illustrations of this machine are given with description of all the parts, etc. They also announce that they manufacture drop presses for making all kinds of work.

The Broad Gauge Iron Stall Works, No. 53 Elm Street, Boston, have issued a little sheet of discounts which they will be pleased to send upon application. They are also sending their friends a small pocket-piece in iron, which is an exact duplicate of their corner manger and feed-box.

F. E. Kohler & Co., Canton, Ohio, have issued a neat little price list showing the new Lawn Queen Rakes, Flexible Back Curry Combs, and Mystic Lawn Fountain. The rakes are made in two styles, one with a steel and one with a wood head; teeth of No. 9 wire, and curved.

The Gibbs Mfg. Co., Canton, Ohio, have issued advance sheets of their November catalogue, covering their garden rakes, post-hole diggers, trowels, can openers, etc. They report to the dealers that their 1895 prices will be found of unusual interest to the trade.

Brabson Bros., Nos. 78–80 Mechanic Street, Newark, N. J., have issued a descriptive price list of their Climax Door Fastener, which is found illustrated upon another page of this issue. They will be pleased to send the same upon application.

A Novel Desk Light.

A novelty being placed upon the market is a new adaptation of the incandescent light for the purposes of the desk. Upon the top of the desk is a sliding frame which allows the light to be placed in a desirable position. The light is placed longitudinally in a horizontal cylindrical ground glass frame. Over this is placed upon top a sheet of perforated metal. This is for the purpose of protecting the hand or other substances from the heat common to the incandescent lamp. In front is a bronze apron which completely shades the eyes from the light; the results being that the full volume of light is thrown down upon the desk, and a full utility in the way of effect is thereby realized.

The Cleveland Twist Drill Co., Cleveland, Ohio, have had a practical tribute to the quality of their goods, by being awarded a gold medal at the Antwerp Exposition. They therefore see in this an indication that the old belief that only Eastern manufacturers could turn out first-class tools, has passed away.

The Wagner Mfg. Co., Sidney, Ohio, have just completed an addition to their foundry building, and have added a number of machines to their finishing department, which will enable them to turn out about one-third more goods than in the past.

New Goods in the Market.

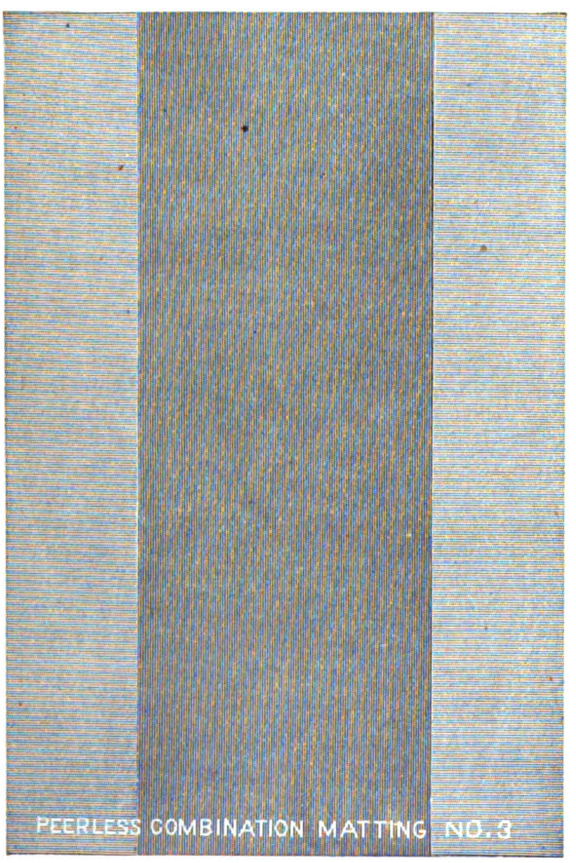
If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

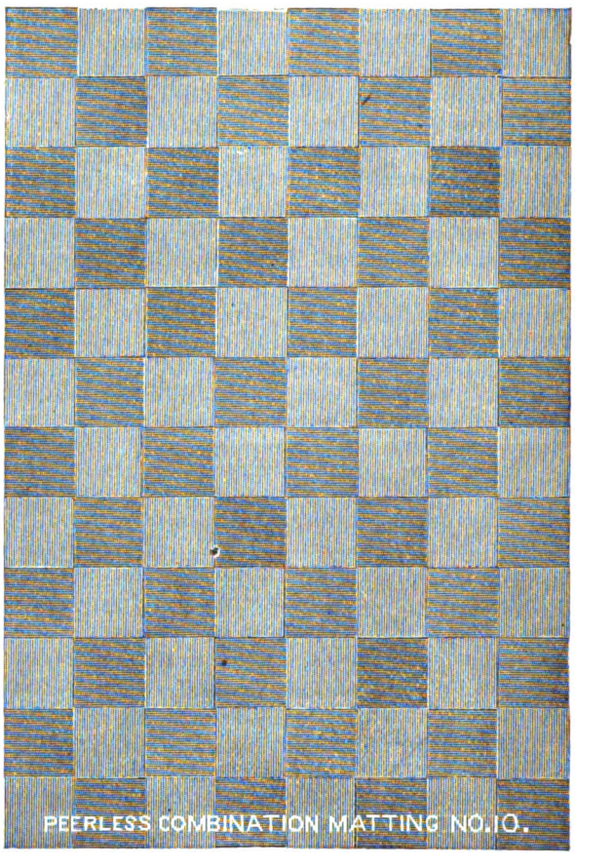
When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

The "Crusty" Bread Pan.



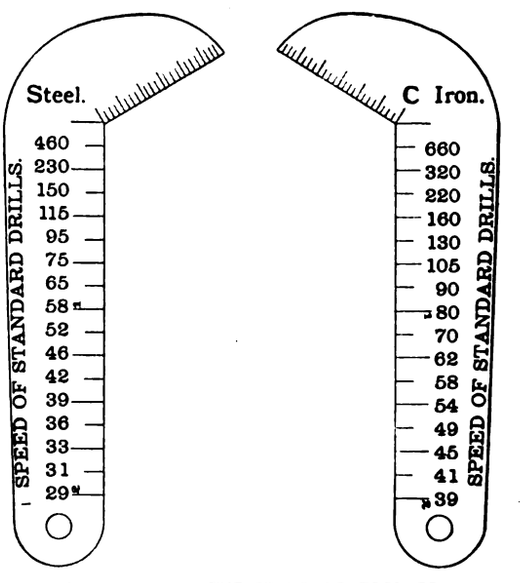
The accompanying cut shows a new curved bottom Bread Pan lately put on the market by the Niles Mfg. Co., Niles, Ohio. "It is a known fact acknowledged by all cooking school



teachers, and others who have tested it, that a curved bottom pan is a far better baker than the old flat bottom pan; also that a pan made of black material is far superior to a pan made of bright material, like tin. This pan is made of black cold-rolled steel, and produces a nearly cylindrical loaf of moderate size and because of its size and shape effectually insures the killing of the yeast germ, thereby avoiding all danger of fermentation in the stomach. It also produces a delicious crust over the whole surface of the loaf, bottom as well as top, and crust is the most wholesome as well as the sweetest part of the bread. The bead along each edge keeps the loaves apart in the oven, and prevents spoiling the crust by their running together. This pan has already been taken hold of by some of the largest jobbers in the country and seems destined to have a very large sale as its superiority and moderate price become known. The dealers' price is but $10.00 per gross, so it can be retailed at a price within the reach of every housekeeper in the land."

Peerless Combination Matting.

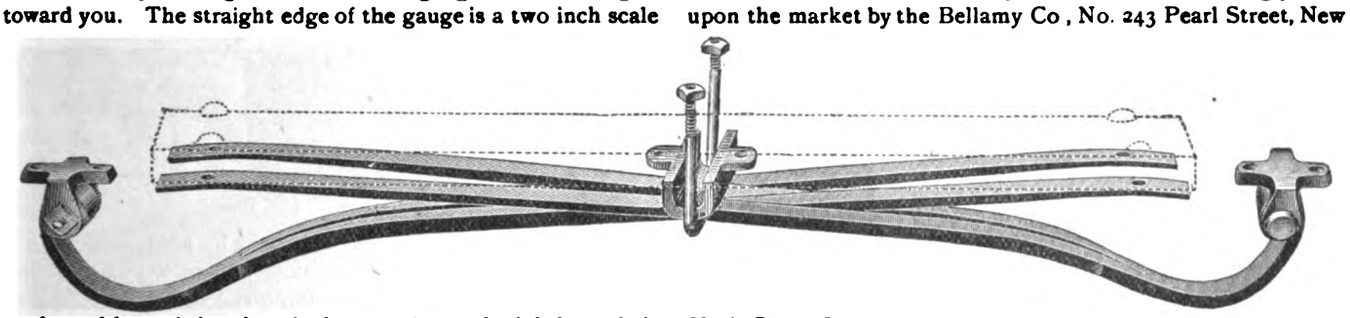
In this connection we show two specimens of the line of Combination Matting being placed upon the market by the Peerless Rubber Mfg. Co., No. 16 Warren Street, New York



City. The fine effects that can be produced by an artistic combination of light and shade are well shown in these articles A special method of manufacture is followed, the matting being "produced from a mold which cost many thousands of dollars, the face plates of which are made up of blocks of metal that are covered with surface grooves. These are interchangeable, making scores of different styles of mat many of them artistically beautiful; blocks run 2½, 5, 7½ and 10 inches square.

When in the mold these blocks turn on a pivot so that a bewildering variety of effects may be secured. A further advantage of this style of mat is that it assures the firmest sort of foothold at any angle. When the smaller blocks are used the most beautiful sort of railroad car mats are made, some of which have already been adopted by the large companies."

Twist Drill Grinding Gauge.



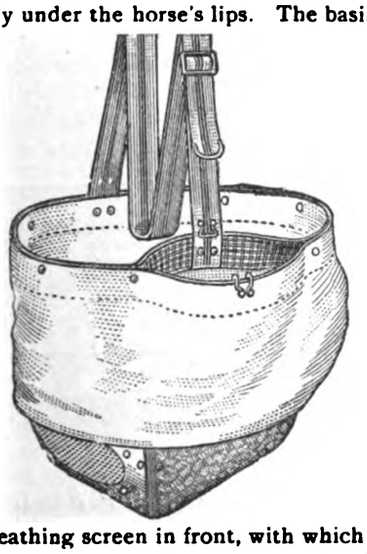
This new Twist Drill Grinding Gauge and Chart is being placed upon the market by the Standard Tool Co., Cleveland, Ohio. In describing its construction and uses, the company say: "Grinding Twist Drills accurately is generally admitted to be a difficult operation, and the proper speed or number of

Copyright, 1894, by THE STANDARD TOOL CO., CLEVELAND, O.

revolutions a drill should run is of great importance in getting the best and most economical results from the use of Twist Drills. Our Twist Drill Grinding Gauge and Chart will enable an operator to grind Twist Drills accurately, thereby making

considerable saving. The cut shows opposite sides of our new Twist Drill Grinding Gauge. It is made of steel one-sixteenth inch thick. The angle of the gauge is ground to exactly fifty-nine degrees, which is the proper angle for the cutting edges of a Twist Drill. The angle on the gauge is graduated so that the cutting edges of the drill can be measured and ground exactly the same length. The clearance of the drill can also be determined by holding the drill on the gauge and revolving it toward you. The straight edge of the gauge is a two inch scale

graduated by eighths of an inch, opposite each eighth mark is a number, which is the best speed to run a drill of corresponding size or diameter. One side of the gauge is marked for boring steel and the other for cast iron. In using the gauge hold it in the left hand and place the drill in the angle of the gauge with the cutting edges of the drill facing you. Grind the drill so that both edges are exactly the same length and fit the angle of the gauge. Also see that the heel of the lip of the drill is lower than the cutting edge, which will give the drill clearance and allow the edges to cut. Always keep Twist Drills sharp, run them at the proper speed as given on chart. If you want to force a drill to do work quickly, run at the right speed but increase the feed."

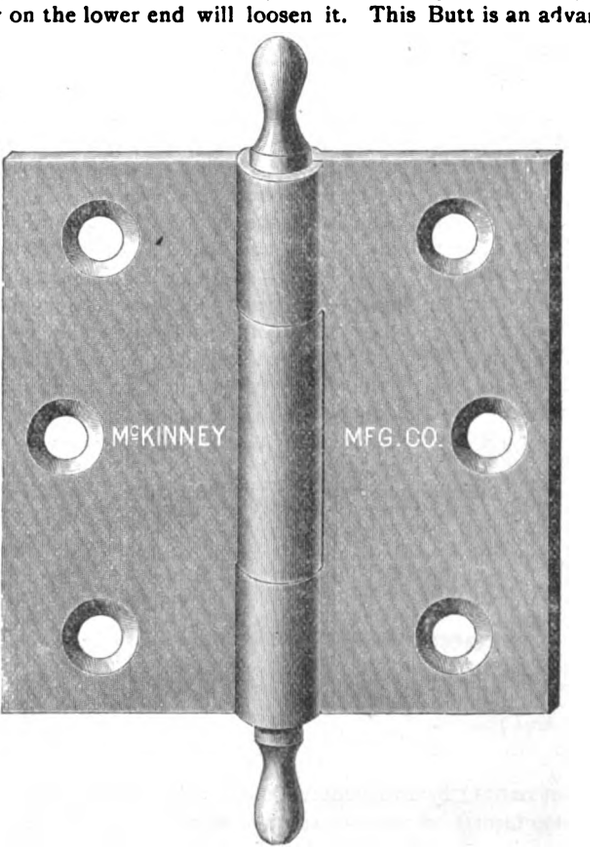


Boss Mending Cone.

The Boss Instantaneous Mending Cone is being introduced to the trade by P. D. Murphy, Lockport, N. Y. They are described as adapted to mending tin, sheet iron, copper and agate ware without fire, solder or acids. The maker says: "The one advantage is that any child ten years old, or any woman, can mend tinware in the kitchen." These Cones are put up in cylinder-shaped wooden boxes. The metallic cones are a little larger than the one shown to the right of the inverted pan in the cut, and are designed to be riveted into the holes of the article to be mended.

Bean's Perfection Feed Bag.

John P. Lovell Arms Co., Boston, Mass., are placing upon the market the new Feed Bag here shown. It is made of galvanized iron and canvas; consists of two bags, one inside of the other, with space between for eight quarts of oats, which gradually drop through into the basin, filling it to the depth of an inch directly under the horse's lips. The basin is oblong in



shape, with breathing screen in front, with which the oats cannot come in contact. While the horse is eating, his nose is at the screen, through which he freely breathes. "It is warranted in every respect; never gets foul." The makers add: "The reason the horse tosses his head while feeding, is either to get air or oats. Both are supplied fully and freely by the use of our bag. And, besides, the horse gets the oats you feed him instead of throwing them out on the ground to waste. You don't have to give him eight quarts in order for him to get four." These Bags retail for $1 each; price to the dealer, $9, per dozen. The manufacturers say that the demand for them is steadily increasing.

"Perfect" Bifurcated Spring.

The "Perfect" Bifurcated Spring here shown is being placed upon the market by the Bellamy Co, No. 243 Pearl Street, New York City. In describing its merits, the company say that it rides level and steady; is easily and cheaply applied; with its use all rocking is obviated; practically unbreakable; and that every spring is oil tempered, tested and warranted. Price, complete with shackles, $1.75 per set. This is but one of other like specialties made by this company, who will be pleased to send an illustrated price list upon application.

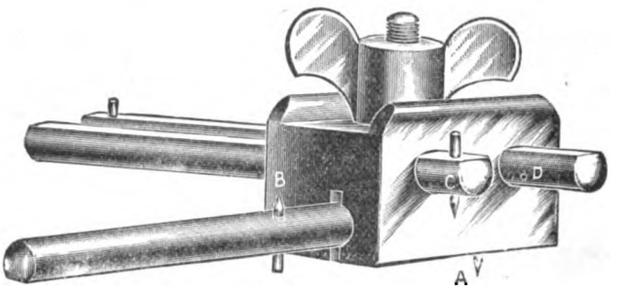
Improved Loose Pin Butt.

The McKinney Mfg. Co., Market and Locusts Streets, Allegheny, Pa., are placing upon the market the Improved Loose Pin No. 704 Butt here shown. This Butt is a new one they have gotten out lately, and the principal object in it is to give the trade a Reversible Steeple Tipped Butt at the same price as the Regular Reversibles. They explain that as this Butt "answers all the requirements and makes a neat appearance, we believe we have accomplished the object in view." They enclose a slip in each box of Butts. It explains that they have "made the pin in this Butt slightly larger under the head, so that when driven down, it will not work up, a fault common in many Butts. When necessary to take the pin out, a slight blow on the lower end will loosen it. This Butt is an advan-

tage over the regular tipped butts, which are higher in price, inasmuch as the pin is reversible, and can be driven in at either end." They are prepared to furnish these promptly, and can, as is the case with other goods they manufacture, ship upon receipt of order.

Digitized by Google

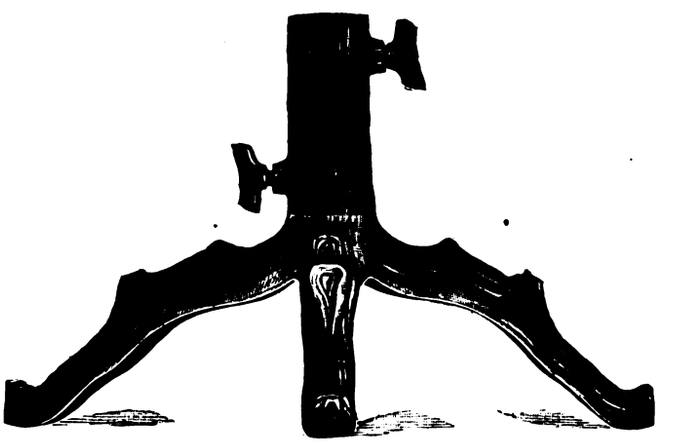
Riding Horse Tricycle.



An attractive and taking article to be added to any holiday Hardware stock, is the Riding Horse Tricycle here shown, which is manufactured by the Quadruped Novelty Co., Canton, Ohio. They describe it as "designed for children of both sexes, from three to twelve years of age, and so strongly suggests that summit of juvenile desire, 'a real live pony,' that its

appearance among a group of children anywhere never fails to produce a profound sensation." They add: "The height of horse is thirty-six inches; the body being stamped from sheet metal by costly special machinery is at once exceedingly light and strong, and the method for operating it simple and durable and not liable to derangement. The wheels are rubber-tired, securing its noiseless running; and the neck being pivoted to the body, the rider guides his steed by drawing on the bridle reins precisely as in the case of a real animal. The horse is propelled by the feet like the ordinary tricycle, and the legs responding to each revolution of the pedals reproduce the action of a horse in trotting with wonderful fidelity to life. The horse is handsomely painted in the various colors found in nature; has suitable mane and tail and is furnished with a neat saddle, bridle and neck collar—in short, nothing has been omitted to render this pre-eminently the leading juvenile attraction of the age. The Riding Horse Tricycle can be operated by a small child without undue fatigue; it furnishes an abundance of invigorating and delightful exercise and by its use children unconsciously acquire a confidence and fearlessness that greatly facilitates their taking up equestrianism when they have outgrown this enterprising substitute for live pony. We also furnish tricycle with iron-tired wheels and horse with immovable legs, when so desired."

Reeves Improved Butt Gauge.



C. E. Jennings & Co., New York, are placing upon the market a new and useful tool for the hingeing of doors, which is herewith illustrated. The point A, as represented in the cut, projects through the slot in the bottom, and gives the cut in the rabbit of the door. Point B gives the cut on the door, thus setting the door the required distance from the stop when hinged. Points C and D in top slides gives the depth of the hinges in the door and jam. The tool gives three independent

gauges for general work, and also may be used as a mortise gauge. It is of steel, highly polished and nickel plated. The name of the Tool is the Reeves Improved Butt Gauge.

Berlin Christmas Tree Holder.

The Berlin Christmas Tree Holder is a new and handsome article being placed upon the market by the Logan & Strowbridge Iron Co., New Brighton, Pa. They describe it as strong and substantial, and neat in design. It is made with three sizes of holders, which fit on the same feet. Their A holder is one and a half inches in diameter; B holder, two and one-fourth inches diameter; C holder, three inches diameter. The

set screw which fastens the tree has a range of three-fourths of an inch. It will be noticed that in all parts this Holder is made to represent the trunk and roots of a tree. They are packed one dozen in a case, assorted, 6 A 4 B and 2 C. Different assortments will be furnished if desired. Price per dozen, dark green finish, $9.

L. F. & C. Bread Knife.

The L. F. & C. Bread Knife here shown is being placed upon the market by Landers, Frary & Clark, New Britain, Conn., and No. 298 Broadway, New York. It has a blade ten inches long, and a polished beech handle. One side of the knife is shown in Fig. 1; the opposite side, which is beveled, being seen in

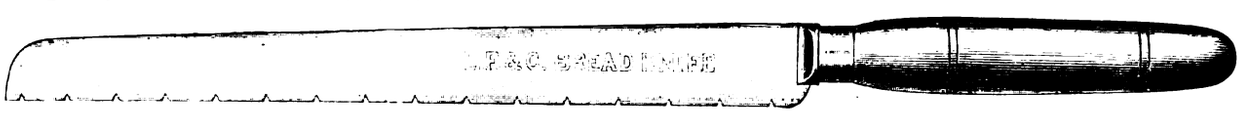


FIG. 1.

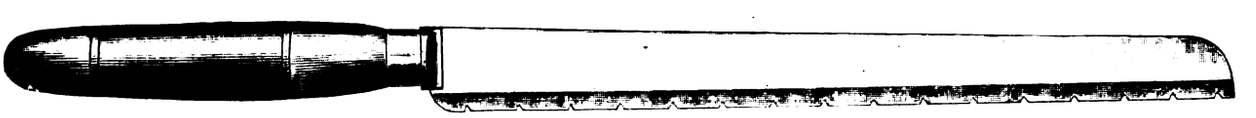

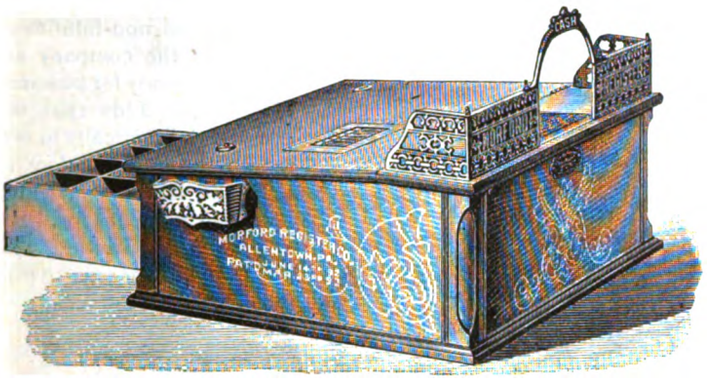

FIG. 2.

Fig. 2. The makers say: "The L. F. & C. Bread Knife has just enough teeth to cut through the crust quickly—not enough to pull and tear the soft bread underneath the crust. We guarantee it to cut bread and cake quicker, more evenly, and with less crumbs than any other bread knife on the market." These knives are packed one in a box, and the price to the trade is $2 per dozen net cash.

Morford's Alarm Cash Till.

In the accompanying illustration may be seen Morford's Safety Alarm Cash Till, manufactured by the Morford Register Co., Allentown, Pa. In describing the same the makers say: "The reason the drawer was first thought of as a patent, was on account of the many petty thefts committed on the various styles of money drawers on the market, by parties getting behind counters and feeling of the smooth keys, and opening the money drawer without giving the alarm, for there are so few parties in business who change their combination frequently, and therefore the keys become smooth, and it is a very simple

matter to find the set of the key by the touch or to make doubly sure by lighting a match and looking for the bright keys. There was, therefore, a demand for a drawer such as we have now completed. We have experimented, until now we have the lock so arranged that no one can pull a key without giving an alarm, whether they pull the keys on which the lock is set or if they pull the wrong ones. Also, in pulling the keys, if a party should pull one key not set in the combination with the direct combination, that one key will come up while the others go down and lock the drawer as securely as if all keys were used in the combination. In other words, you would be compelled to pull the correct keys to open the drawer in all cases; by doing the same an alarm would be given. The money drawer is made of hard wood, the locks and sides being of the best oak, and the fronts are made in oak and in walnut; the fronts made of oak being of quartered oak, polished, while the interior of the drawer is made in keeping with the exterior. The sliding tray is made of wood highly polished, wnile the

bell is of the best of bell metal, for we endeavor to bring the drawer as near perfection as possible, not only in appearance, but also in durability, and therefore we use the best of materials. The drawers are made in two sizes, one being made for parties having narrow counters, and the other for parties having more room. Since its patent on July 10, 1894, we have had a great demand for the same in the Hardware trade, for they claim it a very convenient drawer."

Illustrated Bicycle Novelties.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Foot Brake, Attachment, Etc.

Frank M. Buckley & Co., manufacturers of bicycle novelties, Boston, Mass., are offering the trade the two new articles here

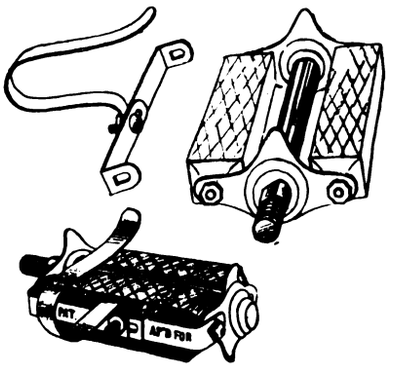

FIG. 1

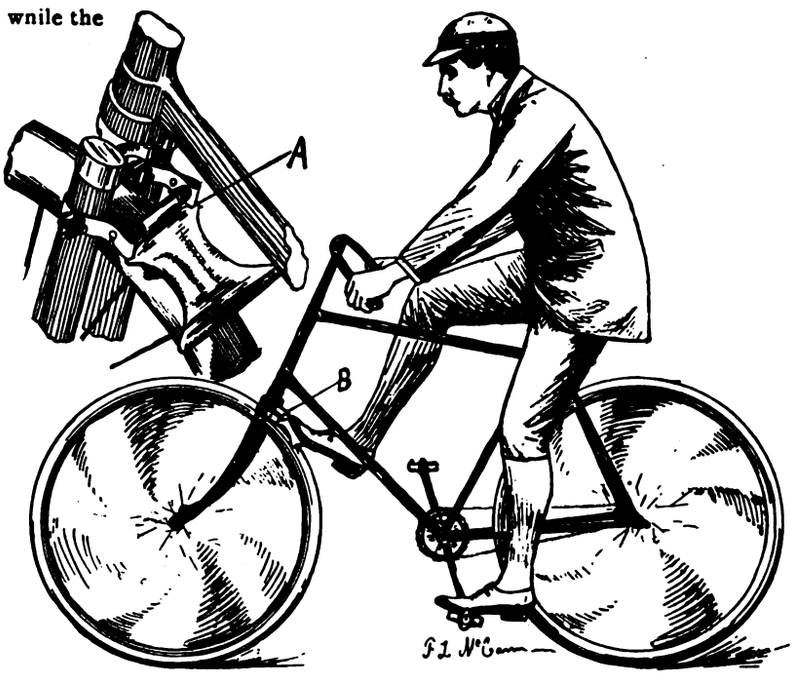
shown. In Fig. 2 may be seen the Brockton Foot Brake, a description of which is given by its makers as follows: "The weight of the above is but five ounces. It is attached to the forks just above the wheel by an adjustable clamp, and can be attached to any bicycle in five minutes by the rider. It is worked by simply putting one foot on the edge and pressing downward (Fig. B), while the other foot remains on the pedal. On removing the foot it resumes its neutral position by the action of two springs (Fig. A.) This brake, on account of its small weight, and the small space it occupies, is just what has been needed to complete the bicycle, and its bright nickel appearance makes it an ornament to all machines. It is attachable to any and all makes of bicycles." In Fig. 1 is shown their "Boss" Toe Clip and "Dirnbirger" Attachment, of which they also say: "The 'Boss' is made for rat trap pedals, and is light and durable. The 'Dirnbirger' Attach-



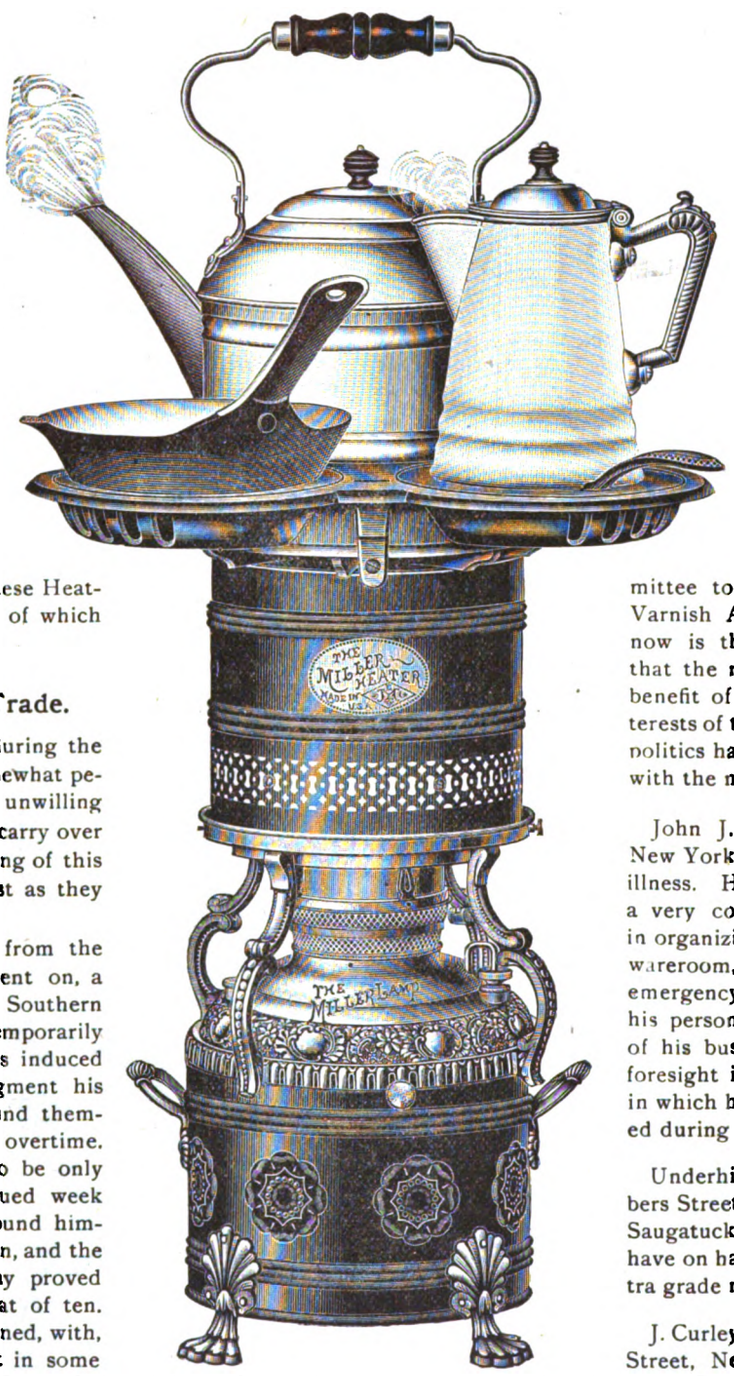


FIG. 2.

ment can be applied to rubber pedals, which makes it the best clip in the market, for three reasons: 1st. It can be attached to any style or size of rubber pedal. 2d. By removing 'Dirnbirger' Attachment it can be applied to any rat trap pedal. 3d. It is made of the best material."

HARDWARE's "Prices Current" are always trustworthy.

The Miller Oil Heaters.

Edward Miller & Co., Meriden, Conn., with salesrooms at Nos. 10 and 12 College Place, New York, and No. 63 Pearl Street, Boston, are meeting with no little success in the renewed business of this fall, with their Miller Oil Heaters. Upon page 58 of this issue will be found illustrated descriptions of several of these articles, with details as to their quality, etc., and in this connection we are permitted to present an illustration of their No. 334 Heater, which shows how they can put upon the top of the drum their No. 5 stove-top with three lids, and can thus do a great deal of heating and baking. This Heater is put up with four strong arms which rest on the body of the lamp, which makes a very strong and satisfactory arrangement for common cooking purposes. These Heaters are described as clean and odorless; requiring no more care than in the case of an ordinary lamp. The cylinders are of russia iron, with removable nickel tops, or with combination heating drum and grate for cooking. They are described as of the best material and workmanship, perfectly safe, the oil never getting hot. These lamps hold one gallon of oil; will burn twelve hours, and are easily lighted by lifting the top of the burner. There will be sent to anyone interested in this subject—as all retail Hardwaremen certainly are—a circular showing these Heaters, with ovens for cooking, of which they have twelve varieties.

The Loaded Shell Trade.

The loaded shell trade during the present season has been somewhat peculiar. Manufacturers were unwilling at the close of last season to carry over any stock, and at the beginning of this they only filled orders as fast as they were received.

A good trade sprang up from the South, and as the season went on, a war developed among the Southern railways which resulted in temporarily very low freight rates. This induced the Southern dealer to augment his orders, and the factories found themselves compelled to work overtime. At first this was thought to be only temporary, but as it continued week after week, the operative found himself under too severe a strain, and the work of fifteen hours per day proved to be less valuable than that of ten. That plan had to be abandoned, with, however, the embarrassment in some large factories that they are five and six millions of cartridges behind on orders that they have booked.

Lawn Mower Trade.

The trade in lawn mowers has continued very late this season, and some manufacturers are still making very good sales. The trade South develops very slowly, and there are only two or three points to which they are shipped. The city of Savannah takes a good number, the taste for a fine lawn being inculcated there no doubt by the presence of its beautiful squares which have grown up under a wise city government. But few mowers are sent further South, Mobile and New Orleans taking very few in proportion to their population. This is somewhat strange, as in that climate it is practically summer all the year around. The trade for next season has hardly begun.

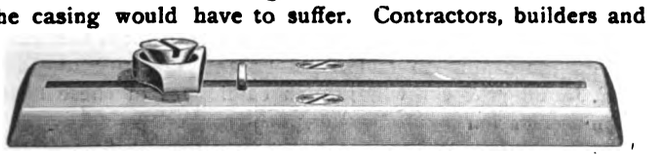
A. J. Warner, president of the Warner Lock Co., Manhattan Building, Chicago, Ill., announces with no small pleasure, that the storm through which his company has recently passed, has cleared away; that all debts have been settled in full, the receiver discharged, and the cause of all their troubles—the suit brought by the town of Hampshire for alleged non-fulfillment of contract—has been dismissed, and that the company are once more ready for business. Mr. Warner adds that the company is practically in better condition than before, as the plant is now thoroughly equipped and paid for. Mr. Warner has worked in season and out of season to produce this pleasant result.

Charles Richardson, of Boston, whose labor in behalf of a national department of trade and commerce we have referred to often heretofore in commendatory terms, is still hard at work in pressing forward the reform to which he has so earnestly committed himself. In a recent report of his committee to the National Paint, Oil & Varnish Association, he declares that now is the time for action, and adds that the request is being made for the benefit of the general commercial interests of the country, and that partisan politics have nothing whatever to do with the movement.

John J. Tower, of Tower & Lyon, New York, has recovered from his late illness. He is attending to business in a very conservative way. Mr. Tower in organizing the staff of his office and wareroom, had always in mind an emergency in which he could not give his personal supervision to the affairs of his business. The wisdom of such foresight is fully shown in the manner in which his affairs have been conducted during his protracted illness.

Underhill, Clinch & Co., No. 94 Chambers Street, New York, as agents for the Saugatuck Mallet & Handle Works, now have on hand a large stock of their extra grade mallets and handles.

J. Curley & Brother, No. 6 Warren Street, New York, are making good sales abroad of their patent Reversible Safety Guard Razor. A large sale was recently made to Drew & Sons who are makers to the royal family of England, and who are located in Piccadilly Circus, London.



Hon. John H. Graham, of John H. Graham & Co., New York, has nearly recovered from his long indisposition, and makes periodical visits to his warerooms on Chambers Street, spending an hour or two there several times in the course of a week.

A. H. Watson & Co., Fayetteville, N. C., are preparing to establish a twine factory.

The "Salem" Hanger.

At the first glance, a Hardwareman may say that the "Salem" Hanger illustrated here does not interest him, but although it is made to hang shades or curtains on, it has nothing whatever to do with the shade or curtain trade. The Hardwareman naturally says when his attention is called to the "Salem": "I don't handle shades or curtains and so it is not of interest to me." But the man who is interested is not the tenant, but the owner. It is made to prevent the tenant from screwing the casing full of holes, and is said to do it thoroughly and positively. That is why it is sold by the Hardware trade and not the shade or curtain man. It is a part of the house, and not a shade attachment, and will interest any owner of rented property or any contractor or builder who is putting up flat or tenement houses. The cheaper the apartment, the oftener the tenants change; and the more frequent the changes, the greater the damage to the casings. If the tenants changed every week and each one had a shade of different width and each one of different make, everyone could be hung, if the "Salem" was on the casing, and the two screws would be all the casing would have to suffer. Contractors, builders and

owners are the people interested, and the only man that can reach them to advantage is the retail Hardware dealer. The "Salem" is less than four inches long, an inch wide and weighs less than two ounces, and is finished in silver, nickel, copper and antique copper. It is being placed upon the market by the W. A. South Co., No. 13 Front Street, Salem, Mass., who will be pleased to send prices, etc., upon application.

W. J. Henderson, Glen Gardner, N. J., dealer in general merchandise of which Hardware forms an important part, reports that his store was broken into some nights since by burglars. The safe was opened and $25 in cash, a watch and other articles were taken. Among these were three silk umbrellas which Mr. Henderson reports were "taken to keep Uncle Sam's bloated bond-holders dry in the rain." Mr. Henderson will forgive the umbrellas if the cash is returned.

Some time since mention was made in these columns that Robert Newton Johnston of Penryn, Placer Co., Cal., had at one time manufactured horse nails by hand for which he was paid 80 cents a pound. In a note to HARDWARE Mr. Johnston corroborates this fact, and says that these nails were manufactured by him in 1872 and 1873, and that he received 80 cents per pound for No. 6 nails, 86 cents per pound for No. 5 nails, and $1 per pound for ox nails. He made these with the old-time drop hammer in Sacramento City.

One of the reasons why the ordinary citizen finds fault with a carving knife lies in the fact that generally he does not know how to use a steel; another lies in the fact that he may have a poor steel. Landers, Frary & Clark, New Britain, and New York, however, feel that if said citizen has one of their new make of Table Steel, and will carefully read their circular "How to Keep a Carver Sharp," and follow its directions, he never will be troubled with a dull knife.

J. M. Hanford, late Binghamton Cutlery Co., announces that having closed out his cutlery business in Binghamton, N. Y., he has associated himself with the well-known wholesale house of Supplee Hardware Co., Philadelphia, and will represent their cutlery department.

The Charles Dittmar Hardware Co., No. 2019 South Broadway, St Louis, Mo., have recently commenced business under very favorable auspices. They will carry in addition to builders' and general Hardware, a complete line of tools.

Revised Price List of Gun Wads.

The Union Metallic Cartridge Co., Bridgeport, Conn., and New York, have issued, under date of October 15, 1894, the following revised Price List of Gun Wads:

REVISED LIST PER THOUSAND OF UNION METALLIC CARTRIDGE CO.'S GUN WADS.

Per 1000. Gauge.	4	5	6	7	8	9&10	11&12	13to16	17to20
Card Board, plain, 3 thicknesses. "A" thickness for over powder 72 1000 in. thick "B" thickness for over shot 40-1000 in. thick.. "C" thickness, extra thic, 28-1000 in. thick.. "A" thickness will be shipped when orders do not specify others.			$0.34	$0.24	$0.26	$0.22	$0.18	$0.18	$0.18
Card Board, printed, "B" thickness only, 40-1000 in. thick, with shot numbers and special names			.40	.32	32	28	.24	.24	.24
Black Edge, regular	$2.00	$1.30	1.20	.80	.80	.70	.60	.60	.60
¼ in. thick					1.20	1.05	.90		
⅜ in. thick					3.50	2.75	2.50		
Pink Edge, regular	2.75	2.25	1.75	1.50	1.50	1.25	1.00	1.00	1.00
¼ in. thick					1 75	1.50	1.25		
White Felt, ⅜ in. thick... For use over powder only. Prevent leading and fouling of the barrel and do not blow to pieces. Express.	7.00	6.00	5.00	4.00	4.00	3 00	2.75	2.75	2.75
⅜ in. thick, White Felt..						3 00	2.75		
½ " " " "						5.00	4.25		
A lubricated White Felt Wad, covered with black grease-proof material. Specially adapted for use over nitro-powder.									
Salmon, regular Black Edge thickness				.60	.80	.70	.60	.60	.60
¼ in. thick					1 20	1.05	.90	.90	
⅜ in. thick					3.50	2.75	2.50	2 50	
A soft Black Edge Wad, without grease, covered with salmon colored paper on both sides, especially for nitro-powder.									
Trap (field)					1.50	1 25	1.00	1.00	
Specially made to be used over powder with the black side down and are thoroughly waterproof thus protecting the powder from dampness and grease.									
Shot Felt, thin Black Edge, not lubricated, for over shot					.75	.65	.55	.55	

Wads ⅜ and ½ inch thick packed 125 in a box. All other Wads are packed 250 in a box. Wads will be supplied in half gauges, cut to order. Discounts unchanged.

UNION METALLIC CARTRIDGE CO., Bridgeport, Conn., October 15, 1894

The Connecticut manufactories are gradually getting into excellent working shape. The Woven Wire Mattress Co. have one hundred men at work, and some are working overtime. The Pratt & Whitney people have eight hundred men at work on full time. The Collins Co., who do a large export business in axes, have six hundred hands working full time; and throughout the state there has been a revival of business which is as gratifying as it is marked.

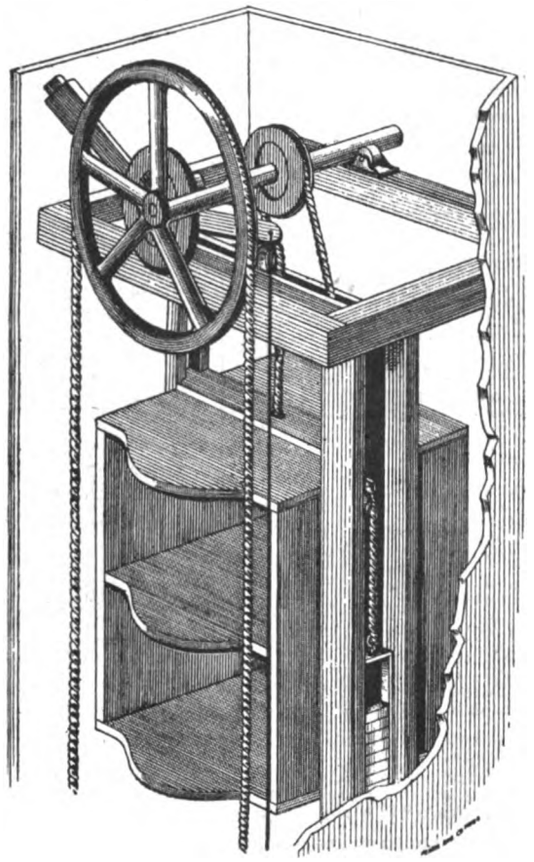
Information comes from Norfolk, Va., that "the Farmers' Mfg. Co., will shortly be in the market for two car loads of 300 fine, soft steel nails; one car load assorted tack and hoop nails; 50,000 sets of light crate hinges, and 3,000,000 patent hoops."

The New England Screw Co. of Boston, Mass., have been compelled by their largely increased business to move into more commodious quarters at No. 240 Dover Street.

The Carrier Cutlery Co., Havana, N. Y., turned out its first knife on September 26th, and the same was promptly donated to the local fire department.

The Stanley Works, New Britain, Conn., will have to make a great many more shelf brackets before they get even with the orders now booked.

The many friends of Philip Corbin, New Britain, Conn., will be glad to learn that he has been completely restored to health.



Landers, Frary & Clark, New Britain, Conn., are thousands of dozens behind orders on their new serrated bread knife.

The Baackes Wire Nail Co., Cleveland, Ohio, have concluded the manufacture of nails for an indefinite period.

The Philadelphia Dumb-Waiter.

The Energy Mfg. Co., Nos. 1115 to 1123 South Fifteenth Street, Philadelphia, Pa., so long and favorably known for their manufacture of self-retaining elevators, dumb-waiters and hoists, are placing upon the market the Philadelphia Dumb-Waiter here shown. They describe it as "positively self-retaining, automatically holding the load securely without the use of clamps or other fastening. If the operator lets go the hand rope at any point whatever the cage remains securely

suspended; the heavier the load the more tightly it is held." They also refer to its simplicity of construction, "there being no complex mechanism, no hidden parts, nor mysterious combinations; everything open and clear, so that everybody can can see its make-up and the principle on which it holds the load, viz.: a shoe engaging on the inside of the rope wheel, this shoe being swung eccentric with the rope wheel. The shaft is cold rolled steel, runs on roller bearings, and the rope wheels are heavy enough to give momentum, so the machine runs perfectly free and easy. To lower a load, it is only necessary to relieve the check line and the car descends itself, the speed of descent being controlled by a slight pull on the check line. It can be stopped by either pulling hard or letting go the check line, so that it is an absolutely safe Dumb-Waiter even in the hands of the inexperienced. The fixtures are shipped completely set up, ready for bolting to their place; no brakes to set, no mechanical work to be done, nor problems in pulleys to be solved by the purchaser. They run light, quick and easy, and will not cause worry and expense for continual repairs." Catalogue sent upon application.

Mr. Kenworthy's Assignment.

James P. Kenworthy, the well-known Hardware merchant on Chambers Street, New York, made an assignment to R. T. Hazell on October 9th. Mr. Kenworthy is so well known to the trade that the knowledge of his failure was received with much regret by the trade. Two years ago he had met with a success which led him to believe that his business could be extended with profit, and he obtained commodious warerooms on Chambers Street, and established an agency in Philadelphia. But values then began to shrink, and losses took the place of profits, in a way that, when they do occur, always surprise the shrewdest of business men. Battling with hope against the inevitable, he has found it impracticable to continue. His liabilities are stated to be $13,000, but the assets, owing to the confusion of the affairs of the Philadelphia agency, cannot be accurately stated. A meeting of the creditors has been called to be held in New York, October 25th, to decide upon various matters, after which a more definite statement, especially with regard to the affairs of the Philadelphia agency can be had. Mr. Kenworthy has the kindliest feelings of all with whom he has been connected, and it is believed that an arrangement with his creditors will not be a matter of serious difficulty.

Gentlemen's Model Tool Chest.

C. E. Jennings & Co., No. 79 Reade and No. 97 Chambers Streets, New York, are placing upon the market their Gentlemen's Model Tool Chest No. 80, which is very complete in its conveniencies, appointments and contents. The outside measurement of the chest is two feet five inches long, one foot three inches wide, and eleven and one-half inches deep. The chest is made of extra quality and heavy hard woods, nicely finished in oil, and varnished, dove-tailed corners, extra heavy and ornamental base, with two large inside sliding drawers, and partitions and saw rack, with extra strong folding handles and tumbler lock. The chest contains one hundred and forty useful articles, and the price is sixty dollars. Cheaper tool chests, as low as five dollars, are also furnished, the prices varying according to style, quality and quantity of tools. C. E. Jennings & Co. will furnish catalogues of these chests upon application.

Keg of Wire Carpet Tacks.

The Taunton Wire Nail Co., Taunton, Mass., are offering the trade the Miniature Keg of Steel Wire Carpet Tacks here shown. It is certainly a useful and convenient little article for any household. It is a one-gross box, containing a full assortment of carpet tacks, made in polished, blue or tinned; the assortment consists of tacks Nos. 6, 8, 10 and 12. They are also put up in one-half gross boxes. They describe the article

as showing the tacks in a salable form, and ask the pertinent question: Did it ever occur to you that wire carpet tacks and wire nails are not only far superior but much cheaper to use? This company will be pleased to send price list, etc., upon application.

The Boston Belting Co., Boston and New York, have issued a handsome colored sheet describing and illustrating their "Imperial" Spiral Piston Packing, which is made in the form of a continuous ring, and is shaped to the rod and box, thus avoiding the trouble of bending to fit its place. They would be pleased to have the trade write for price and discount.

Samuel Winslow, the founder of the Samuel Winslow Skate Mfg. Co., Worcester, Mass., has passed away, at the age of sixty-seven years. He was a useful man in many fields of labor, and served as mayor of his home city. Time and space are too brief here to make fitting mention of his life and labors, which we shall do in the issue next succeeding.

Review of the Markets.

Money: The financial world is somewhat disturbed by the renewal of gold exports from America, and the serious illness of the Czar of Russia. Politics in the United States, in view of the approaching election, are also a factor. All these factors are simply incidental. The production of gold is increasing now quite rapidly all over the world, and the process now going on is one of equalization and not such as to cause alarm. As to the Russian problem, there is little to say. It is a country of the unknown, indeed mysterious, and if a new monarch takes the place of the present, and precipitates war, which might involve all European nations, the course of events could not be otherwise than favorable to this country.

As to the coming elections, it has always been a half-way mystery why the people of the United States should stop in their commercial transactions, whenever there is some doubt as to the distant future of the control of the affairs of the country. There can be no change in the control of the affairs so far as the finances of the nation are concerned, until 1897. Meanwhile the wants of the people will not be less than they are now, and this provision has to be made under all circumstances. The tide may ebb and flow, but in the end it averages the same.

In Hardware lines the tone of busines is constantly improving, although there are lulls in the tide which are somewhat discouraging.

In builders' Hardware there is little doing at the moment, and the market is heavy. It is not expected that much will be done, except in the way of general repairs, until after the commencement of the new year.

Manufacturers of scales report a business this year much better than last, and about equal to that of previous years. Dealers feel much encouraged at the outlook. The dealers in tools and machinery report a very fair demand from all classes of machinists as well as manufacturers. This reflects an encouraging state of affairs in those sections of the country which produce for the consumer of the country. A dealer from out of town was in the city the other day and remarked that it was almost impossible to fill even small orders, the manufacturer being short of stock. Many an order which had been given has afterwards resulted in a withdrawal for this reason.

Mechanical rubber goods men report a very fair business in belting and packing. In specialties there is not so much doing.

In rope and cordage the business is fair, but far below the average in former years. Prices are fairly held, but not much movement in product is expected until after January 1st.

In paints the market for the past fortnight has been very dull. It is said that conferences are being had among the leading corroders for the purpose of establishing more uniform prices, both for domestic and the foreign production. In White Lead trade is somewhat dull; some inquiries having, however, come from the West, but at low prices. In Red Lead there is a light demand. For litharge the demand is light, both from the rubber and glass trades. In barytes there is a fair ordinary inquiry for small lots. Chalk is quiet. Mixed paints are in very good request. Retailers are stocking up with confidence. Glues are steady, prices being well maintained.

In Window Glass the trade is dull, sales being far below the average. Importers so far are holding up prices, with some indications of cutting before long. The Oriental war has closed a large market for Belgian. Discounts are reported at 70&5 per cent. for large quantities. Plate Glass is not in a satisfactory condition. While the competition is severe, an effort is being made to advance prices. Discounts are 70&10 per cent.

Linseed Oil is in light demand, the paint men being out of the market.

The Dean Linseed Oil Co., New York, quote the prices of pure linseed oil as follows: Raw, 56 cents per gallon; Boiled, 59 cents per gallon.

Wire Nails are in good demand, the products of the mills having been sold well ahead. Prices are not altogether satisfactory, and buyers seem to be "playing the market" for lower quotations. A price at the mill in the West is mentioned at 95 cents, but owing to high freight rates, $1.20, $1.25 and $1.30 out of store in New York is asked. For Cut Nails there is a fair demand, prices being 87½ cents on the dock in New York, and $1 out of store. Barb Wire is somewhat weak in tone, $1 95 being asked at the Pittsburg mill.

Metals: The market for tin is somewhat flat, with prices weak In Copper, affairs are rather dull, consumers for the moment being well stocked. In Lead the market is very low, with a weak tone. Spelter is steady, with little business. Antimony is quiet, but steady.

The demand for Strap and T Hinges was very good until about the 15th; since then it has been somewhat unsatisfactory. In many lines this report comes in, and this state of affairs is ascribed to a neglect of business for the sake of politics.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, New York, in their weekly market report, say that the wheat crop of the world is superabundant, but that there is an amount of waste and extravagance in its use going on that may soon dissipate the apparent surplus The better grades of flour are now made in preference to the cheaper, as heretofore, and the feeding to animals is at its maximum. In corn the crop will turn out better than expected, and an economy in its use will possibly prevent an extreme price. Russia is shipping large quantities of oats to England, double that of one year ago. Provisions are becoming somewhat scarce on account of the economy in corn. Railway stocks are influenced by poor gross earnings and some manipulation. The economies in the management of the roads are not yet known, and so far as they will offset the decrease in gross, is yet problematical. The crop movement in cotton is nearly twenty-five per cent larger than last season at this time. The prices of cotton and wheat, we will add, are very low and a large factor in the present situation.

THE BOSTON TRADE.

Reports throughout New England indicate that business is in a satisfactory condition, and at this time when few orders are placed for future delivery, attention is paid only to those items which are in immediate demand. In this line there is an activity which is fairly satisfactory, but we notice the same conservative tendency which has been dominant through the past year. This caution on the part of purchasers has had good effect on trade. Few failures are reported, and it is evident in this locality that the Hardware trade may be said to be in a healthy financial condition.

The low prices which are ruling seem to have no temptation to buyers, other than for immediate necessities, and as long as the great staples, wheat, cotton and iron, are held at present quotations, we can see no reason for advances.

FRYE, PHIPPS & CO.

THE PHILADELPHIA TRADE.

The hopeful feeling in trade is strengthening daily, although so far it is largely a sentimental feeling, and has not been sufficiently strong to induce buyers of Hardware to order goods in any quantity. Perhaps a better variety is in demand, and it is a fact that tools are once more selling, showing that mechanics and laborers are being furnished with some employment. It is fortunate that such is the case, for the enforced idleness of last winter probably consumed all the savings of many of the

Digitized by Google

laboring people, and another winter of idleness would necessarily entail much suffering.

It seems that business is better in other lines than Hardware, but this may partially be accounted for on the ground that most enterprises requiring Hardware are started in the spring and not in the fall, and that it is not reasonable to expect a greatly increased business until next spring.

Prices are without decided change, although it is very evident that many of the manufacturers are heartily sick of the low prices which have been prevailing for such a length of time, and this is shown by the numerous meetings which are being held among manufacturers with an idea of agreeing upon higher prices. With many it is a case of life or death, and the tendency towards combined prices was perhaps never so strong as to-day. It is now so near the end of the year, that a review of some of the declines of the year is entertaining, and while we have not time nor space to go into the matter fully, the extent of decline may be seen by glancing at a statement. It is safe to say that

Machine Bolts and Lag Screws have declined	25 %
Common Carriage Bolts	20 %
Screws	40 %
Screw Hook Hinges	15 %
Cast Steel Bits	12½%

While the declines on these items are perhaps exceptional, still they indicate the severity of the changes of the year, and it certainly seems very improbable that prices can go lower, as many of these goods were thought to be at bottom a year ago.

Biddle Hardware Co.

THE CHICAGO TRADE.

We think that trade the last two or three weeks has shown some slight gains; dealers seem a little more willing to cover what looks to them to be actual needs and wants, but it is still done in a very conservative manner, and the principal difficulty that the jobbing and manufacturing trade are now laboring under seems to be the character of the orders and specifications that come to them to fill. It seems almost impossible to get a dealer to look ahead for more than his actual needs but very few days, and while consumption is undoubtedly going on all the time, most of them seem willing to lose some business which they could otherwise get, rather than order goods which there is a possibility of their not being able to turn into money very quickly.

The number of orders received for several weeks past has been very satisfactory, but the quantities ordered are so light that the total business shown cannot fail to be disappointing. Some lines of goods have been moving quite actively, and on those particular lines the factories seem to be decidedly short of goods. Almost the universal expression of opinion from trade is to the effect the stocks they are carrying are exceedingly light, and if something of a decided or pronounced character should occur to re establish the confidence of the business commuity, they do not see any reason why the demand should not be very materially increased. We are looking somewhat to the fall elections to give an impetus of this character, and we certainly hope that it will materialize.

Woodrough & Hanchett Co.

THE LOUISVILLE TRADE.

Following our last report, was a period of sluggish and small demand, until the 15th, when a noticeable improvement developed in the frequency and diversity of orders. In the usual course of trade, this is not surprising, for we have entered upon the fall trade period, and exhausted stocks render replenishment necessary.

Speculation as to the continuance of improvement noted, in the light of previous predictions, seems like treading on uncertain ground, hence we will await developments before stating our views. Manufacturers complain of slim margins of profit, but if there is truth in the adage that "misery loves company," they ought to be consoled.

Efforts have been made to advance prices of some goods, but without effect. No decline has taken place, however, and if demand continues to quicken, we see nothing to hinder a better tone and slight advances. We quote: Bar Iron, $1.15 and $1.25; Cut Nails, $1.10, and Wire Nails $1.25 for good averages; Barbed Wire, $2.25 for galvanized. All from stock. We have full stocks in all our lines, and make immediate shipments, thereby enabling our patrons to dispense with heavy outlay in carrying big stocks. This is an advantage not to be overlooked in times like these.

The Todd-Donigan Iron Co.

THE DAVENPORT TRADE.

The terrible, almost revolutionary, strike has become history; the slow and tedious Fifty-Third Congress is a thing of the past; the County and State fairs have put up their shutters and closed their gates for another season; an average crop has been harvested; political excitement, incident to fall elections will soon be over, and it does seem that there is nothing now to detract the minds and muscle of the people from their usual vocations.

Prices of Hardware are low. The strife in the far East cannot effect our business interests unprofitably. It would seem, therefore, that the conditions are favorable for a healthy fall trade.

The advance in nails lasted about the same length of time, and met the same fate as the recent advance in screws. The combine, association, or whatever it may have been called, on screw and strap hinges has collapsed, and prices have already dropped over 20 per cent. Rope market is unsettled, with lower tendency. Manufacturers are making an effort to advance the price of barbed wire. Some of the mills claim to be sold up in sheet iron and sheet steel, but there is a lack of firmness in the market. Skate orders are being placed freely by the retail dealers.

Orders are conspicuous in numbers, and also in the small amount of money they represent. It is a significant fact that mail orders are larger and agents' orders smaller, than at this season a year ago.

The excellent condition of the roads facilitate marketing of the grain, and there is no cause for complaint in the way of collections.

Sickels, Preston & Nutting Co.

THE BALTIMORE TRADE.

Business for the past fortnight has been entirely satifactory, and compared with the corresponding period of last year, shows a gratifying increase. Were the same goods being sold at the prices ruling during the fall of 1893, the increase would have been more notable. As it is, we accept the present condition as a turning point and buoy ourselves with the belief that better times are ahead. To those who, during the past year, have sought beneath the surface for the cause which brought about such widespread distrust and uncertainty, the time has not been ill-spent nor fruitless. They have been brought into a truer knowledge of their business. Details which in past years were unknown to them, suddenly assumed prominence. The friction in the cog-wheels, unnoticed when the machinery was running full speed, gave forth harsh and discordant sounds when the engine slowed up. During the temporary "shut-down" if you made the proper repairs, you are all right.

Notwithstanding the very low price of cotton, our representatives in the far South are securing a fair amount of business. Many of these orders duplicate goods bought earlier in the season. This in itself is a good sign, and shows the conservative spirit existing in that section.

Of course, our gun business just now is in excess of the other departments, but seasonable goods are receiving a fair amount of attention.

The recent concession in the price of Gun Wads by the Ammunition Association was in the nature of a surprise to many of us. Does it herald a decline on some other related goods? It is generally the "unexpected" that happens. Prices on staples remain practically without change, although some of the tool manufacturers in the Pittsburg region promise an advance. With such a meagre demand for tools, it is questionable how long such an advance would last. Competition is fierce, and the manufacturers have yet to learn from the labor leaders the lesson of "sympathetic" advances.

The Tabb & Jenkins Hardware Co.

THE AUSTRALIAN TRADE.

Actual trade operations for the past month do not show any improvement over the preceding four weeks, but there is really

Digitized by Google

nothing in this to occasion any disquietude. History repeats itself; and succeeding all depressions there are alternate periods of improvements, slight retrogressions and calms in the volume of trade, with an upper tendency generally prevailing, showing that extreme caution obtains in all transactions, with a realizing sense that it is wiser to proceed slowly. There is a distinct undercurrent, however, setting toward better times; and this, joined to the important factor of advances in the prices of wool, mutton, tallow, silver, tin and copper, constituting the major portion of Colonial exports, tends to strenghten the belief that matters are on the mend, and consequently a more cheerful tone prevails in commercial circles.

Then, too, a pretty general reduction in bank deposit rates has taken place, making a fair amount of money available in the open market on easier terms.

McLEAN BROS. & RIGG, LTD.
Walter J. Travis, Mgr.

Nos. 52 and 54 New Street, New York.

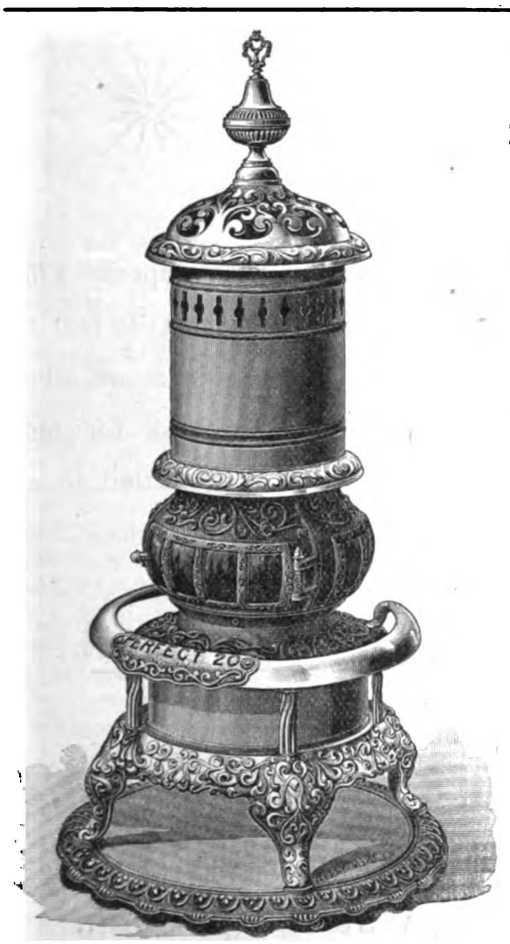
THE VARNISH AND COACH COLOR TRADE.

There has been little change in the situation since our last letter. Varnish and Coach Color business maintains some improvement in bulk of business transacted over last year and the past summer. Collections are not equal to expectations, and are not equal to what they have been during the last three months. It is hoped that an improvement in this line will shortly follow the improvement of sales.

EDWARD SMITH & CO.

Times Building, New York.

The edge of a good razor is very sensitive. A Swedish razor will get a small gap in the blade on the slightest provocation. It should be used for only one purpose, that of shaving the face. An experimentor who put one of these razors through a bunch of hair, found that it was like a saw when he had finished the operation.



We have been informed by W. R. Daughtry, of Opelika, Ala. that he has a new article in brass for which he has not made manufacturing arrangements. He would be pleased to hear from makers of brass plumbers' goods and useful novelties, who may have a desire to invest in an article of that character.

Death of Samuel Winslow.

Hon. Samuel Winslow, ex-mayor of Worcester, Mass., and founder of the Samuel Winslow Skate Mfg. Co., died at his residence in Worcester on the morning of Sunday, October 21st. He had been suffering from a complication of diseases for nearly a year, and for six months or so had been confined to his house. During the two weeks preceding his death he failed rapidly, but the end came in peace.

Mr. Winslow was one of Worcester's most enterprising and successful business men. He was born in Newton on February 28, 1827, a descendant of Kevelin Winslow, brother of Gov. Edward Winslow, of the Massachusetts Colony. He received his education in the schools of his native town, and, after leaving school, was employed in the manufacture of cotton machinery, and so rapid was his advance that at the age of twenty he was foreman of the shop with over fifty men under his charge. In 1855 he moved to Worcester, and formed a partnership with his brother, Seth C. Winslow, and started a machine shop. In 1857 they began the manufacture of skates, in which they were specially successful, and out of that effort has grown the great corporation of the Samuel Winslow Skate Mfg. Co., of which Mr. Winslow owned a majority of the stock, and held the position of president and treasurer. Mr. Winslow proved himself a good citizen in other lines of labor, serving as member of the Common Council of Worcester, a representative in General Court, alderman of the city, and finally mayor. In a succeeding issue a more extended notice of his private and public labors will be given, as neither time nor space will permit adequate mention here. It is needless to say that from his usefulness and high character, his loss is greatly mourned not only by his immediate associates, but by the entire community of which he was a part.

The cheapness of iron at the present time is bringing it into use for many purposes which a few years ago would have been impracticable. Everyone knows that in the back yards of houses in cities the unsightly wooden pole for clothes line purposes has long held sway, but now the slender iron pole is taking its place, and, naturally, it is an innovation that will prove in the course of time to be universal.

No. 20 Perfect.

The Perfect Oil Heaters

No. 20 and No. 12.

The Two Leaders For This Season.

All brass tanks and all other features worthy of incorporating in oil stove construction.

If you wish to knock out competition handle these stoves.

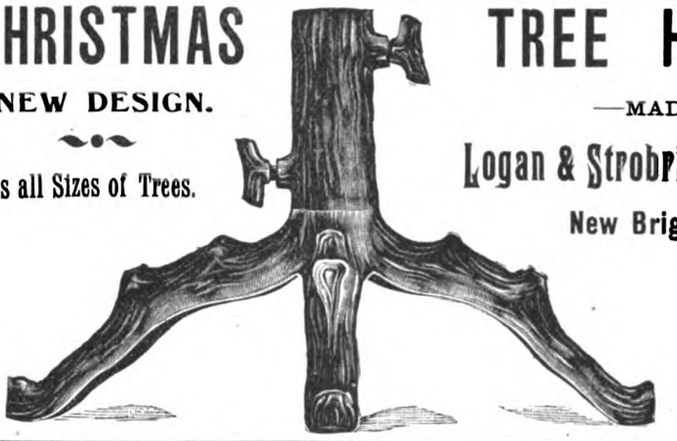
If an advertisement in a journal like this don't pay, the only reason there can be for it is what you say or fail to say in your ad.—that's all. If not satisfied, write Walter L. Gallup, Writer and Director of Advertising, 112-114 Dearborn Street, Boyce Building, Chicago.

The Reading Hardware Co., Reading, Pa., are placing in their New York warerooms, Nos. 96 and 98 Reade Street, a handsome sample room, which will compare very favorably with any apartment of that character in the city. The room is about 16x40 feet, is finished handsomely in oak, with a top of fine plate glass. With the line of goods that are displayed and the accompanying surroundings, the whole presents a very attractive appearance.

The use of what is commonly deter minated conductors' punches, is growing in many directions. In some stores in the West, a purchase of the value of a dollar or more is entitled to a cash premium at the pleasure of the customer, and these punches with their various combinations are used to designate the amount due the customer on the sale.

Joseph H. Seed, Nos. 21 and 23 Centre Street, New York, says that this has been one of the best seasons he ever had, the sale of his Self-Cleansing Water Filters having more than trebled that of any previous year.



George H. Chatillon, of John Chatillon & Sons, New, York has returned from his country place and taken up his residence in the city permanently for the winter.

The Conroy patented New Automatic Refrigerator Door Fastener, with lock and key.

THIS FASTENER is the most complete one ever invented. The door will push to more easily with this Fastener than any in the market. The Fastener will tighten the door by the door closing. It is the most substantial; nothing about it to get out of order. By lifting the handle quarter circle the door will open, and if it sticks it will release it. It has a new and improved lock, absolutely secure. Made for flush or raised doors, composed of brass or bronze metal in any finish desired, plain or ornamental. MANUFACTURED BY

HARDWARE

is growing in circulation and influence with every day that passes. Now is the time to subscribe!

Profitable to the Dealer, Indispensable to the Machinist and Engineer.

It is an absolutely pure, foliated, water-dressed and air-floated American graphite, from our own mines at Ticonderoga, N. Y. It has unrivaled smoothness and endurance. It is entirely inert, and not affected by heat, cold, steam, acid, or any known chemical. It largely increases the lubricating value of oils and greases. It may be mixed in water, oil or grease, or used dry.

STYLE D.

A

Mistaken Notion.

It is a mistaken notion that a fine store in an eligible location, surrounded by attractive signs, is a superior advertisement; for the experience of the most enterprising merchants is that it pays better to spend less in rent and more on advertising.

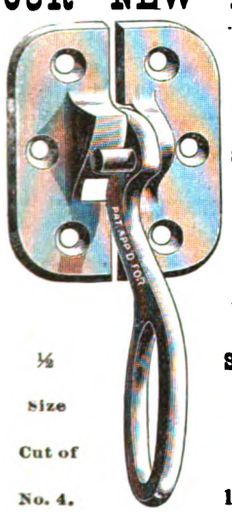
THE SUPERIOR SPRING HINGE FOR HOUSE GATES.

—Surpasses all known gate hinges ever placed on the market.—

Patented Oct. 5th, 1892, Pat. Applied, 1893.

Tested Compound Springs, Rustless Finish.



WEATHER PROOF. Use 3 hinges on heavy or wide gates.

Half Size Cut.

A True gate hinge; swings both ways, does not raise the gate as ordinary hinges do, but opens level. Is self-shutting and always stops at the centre. Has no parts to get loose or out of place, and is easily applied. When adjusting tire bolts or wood screws may be used for both post and gate or either, thus covering all requirements. Any catch may be used with these hinges; none, however, are necessary

OUR NEW AUTOMATIC FASTENER.

THE MILLER OIL HEATERS.

No Disagreeable Odor. No Ashes. Light and Heat in Abundance

No. 327. No. 3 Lift Burner. Height, 32½ inches. Spread of Base, 12½ inches. Nickel Finish.

Just the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

They are an Assured Success, from the fact that the Lamps used are "The Miller Lamps." THE LATEST AND BEST.

IN THESE HEATERS YOU HAVE A HAPPY COMBINATION: The Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGE MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

A MOST IMPORTANT FEATURE.

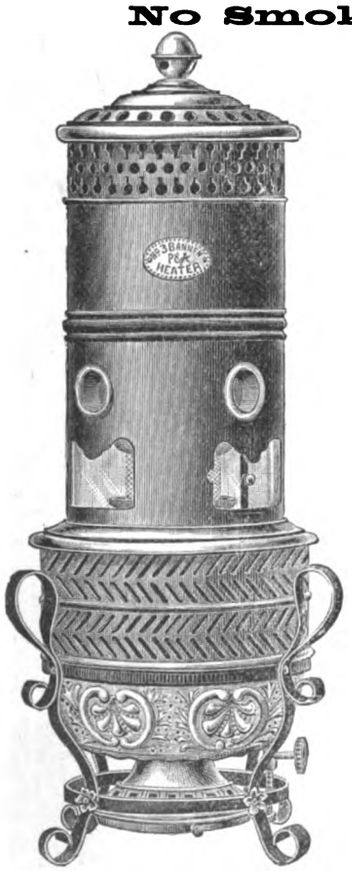
☞All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

No. 328. No. 3 Lift Burner. Height, 32 inches. Spread of Feet, 11¾ inches. Russia Iron with Nickel Lamp and Trimmings.



—MANUFACTURED BY—

EDWARD MILLER & CO., MERIDEN, CONN., United States of America.

New York Store: 10 & 12 College Place and 66 Park Place. Boston Store: 63 Pearl Street. Chicago Store: Rooms 808 and 809 Masonic Temple.

BANNER OIL LAMP STOVE. NO CHIMNEY NEEDED.

No Smoke. Patent Applied for. No Odor.

No. 971.—Stove Complete. Height, 26 in.

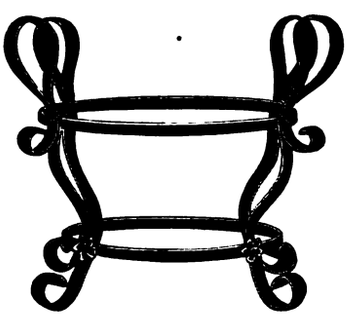


Fig. 1.—Shows Wrought Iron Stand in which Fount rests.

Fig. 2—Showing Fount with Ratchet Wick Movement.

Economy and Convenience in Heating.

POINTS.

The Oil Fount is made of brass, highly nickeled and no danger of leaking; holds one gallon of oil.

The Fount Frame is artistically made of wrought iron, making a solid base for the stove.

The Burner is the best made, and only one with inside feeder wick, allowing all the oil to be consumed.

The Indicator shows at all times how much oil there is in fount.

The Flame is regulated with the screw wick movement, which allows the wick to be raised or lowered with nicety and exactness.

The Drum has sliding door for lighting. The round openings allow the cold air to be drawn into the hot air chamber, which becomes heated and is thrown off with the radiating force, thus making a triple draft.

Fig. 3.—Showing body of stove removed from Fount.

Get one for your Bed, Bath or Smoking Room, Library, Nursery, Office or Conservatory.

TRAVELING Salesman wants A-1 Specialties or Staple Hardware lines. Cutlery, Sporting Goods or Tools. Ohio, Michigan and Indiana. Established trade. A-1 reference. M. I. Lee, Toledo, Ohio. General delivery.

AMERICAN, aged twenty-nine, disengaged October 15th, desires situation. Twelve years business experience with leading manufacturers. Understands bookkeeping, correspondence, general office work, etc. Address American, care HARDWARE, No. 143 Chambers Street, New York.

WANTED—First-class salesmen will find it to their interest to correspond with the Sun Mfg. Co., Greenfield, Ohio, in reference to their Combined Show Case Money Drawers, and other scheme goods, to carry as a side line.

TRAVELING SALESMAN wants A1 selling specialties for Wisconsin and Minnesota. Address F. S., care HARDWARE, No. 143 Chambers Street, New York City.

A YOUNG man with eight years experience in builders' and ice box Hardware, also in bellhangers' and locksmiths' Hardware, desires a position with wholesale or retail house, and with moderate terms to prove his ability. Address L. S. S., care HARDWARE, No. 143 Chambers Street, New York.

AN experienced salesman, machinists' tools and mill supplies ("established trade"), is open to an engagement. A1 references. Address Active, care HARDWARE, No. 143 Chambers Street, New York.

AS bookkeeper and salesman, Hardware, stoves or house-furnishing house. Reference, Palderson Bros. Co. Address, W. N. F., care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED traveling salesman wants good specialties or side line on commission, for Hardware, stove, or general trade, in New York and adjoining States. Address System, care HARDWARE, No. 143 Chambers Street, New York.

TO MANUFACTURERS.—If you desire to increase your sales communicate with the advertiser, who represents a Hardware Manufacturing Co., and is open to add to his line of representation. He has a large personal acquaintance with domestic and export trade. Address New York Representative, care HARDWARE, No. 143 Chambers Street, New York.

Help Wanted.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No 115 North Vine Street, Hazleton, Pa.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Wanted Chicago Agencies.

A WELL-KNOWN business man, of financial responsibility, a good salesman, will establish CHICAGO office October 1st and wishes to obtain agency of manufacturers of Hardware specialties, or any goods that can be sold to jobbers. Manufacturers of any such goods, seeking an outlet, will find this an excellent opportunity. The commercial credit and business references of the party are the very best. Address "Chicago Agencies," care HARDWARE, No. 143 Chambers Street, New York.

Agencies for Hardware Specialties Wanted.

AN experienced salesman with extensive acquaintance among the larger buyers of builders' Hardware, calling frequently on the trade in Philadelphia, Pittsburg, Baltimore and Boston, and having office in New York City as agent for a first-class manufacturer, is anxious to represent an additional company. Address W. H. E., care HARDWARE, No. 143 Chambers Street, New York.

A HARDWARE commission house of New York City, centrally located, with ample room for samples and stock, and abundance of capital to carry out any agreement or contract which they may enter into, wish to negotiate with manufacturers of staple lines of Hardware or specialties. For further particulars, address Commission, care HARDWARE, No. 143 Chambers Street, New York.

WANTED—Sales agency. Manufacturers of leading lines of Hardware or kindred goods, who are not properly or sufficiently represented to the jobbing trade, in territory between Pittsburg and Omaha, would do well to correspond as below. "Business," care HARDWARE, No. 143 Chambers Street, New York City.

BY a party who has been in that line for years and has introduced and obtained a large trade on several specialties. Special attention paid to the Eastern and Southern and Canadian market, but have connections throughout the United States and export market. Address "New York House," care HARDWARE, No 143 Chambers Street, New York.

Business Opportunities.

TO EXCHANGE a business lot with a brick building on same, located on North Main Street, a paved street with electric cars passing the door; also a finely improved farm of 160 acres in Sedgwick County, Kansas, all clear for a modern stock of *shelf* Hardware. Address McKnight & Co., Wichita, Kan.

WANTED—A first-class builder. Contractor of Rochester, N. Y., having an experience of ten years, would like to enlarge his business by taking in a partner with capital. For further particulars address P. O. Box 666, Rochester, N. Y.

For Sale.

A DESIRABLE Factory in Yonkers, N. Y., within 3½ miles of the New York City line, one hour from Battery, on line of railroad, with siding, adapted to any kind of manufacturing. Elevator, electric light plant, engine, and all other conveniences. This is a rare chance to obtain a valuable factory property, beautifully situated, in healthful locality, where property is rapidly advancing as the metropolis moves northward. The price is less than half its real value. For further particulars apply to Todd & Bible, 261 Broadway, New York City.

Law and Collections.

PLACE your Chicago Collections and *legal business* with SAYLER & FRAZER, Attorneys-at-Law, 171 La Salle Street (N. Y. Life Building), Chicago, Ill.

ESTABLISHED 1818.

"Pennsylvania" Fruit Picker

This Cut almost speaks for itself—the device being so much like the human hand, shows at once the utility of the article.

PATENTED.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and Easily Adjusted to a Pole. It has been sold for several years, and the demand (as it is becoming known) is steadily increasing. The difficulty of detaching fruit and securing it unbruised is apparent to everyone so engaged. This overcomes the difficulty, and saves the finest fruit, which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities. **Price, per doz., $6.00. Liberal discount to dealers.** It will gather Apples, Peaches, Pears, &c.

—MANUFACTURED BY—

Pennsylvania Wire Works,

EDWARD DARBY & SONS,

233 and 235 ARCH STREET, PHILADELPHIA, PA.

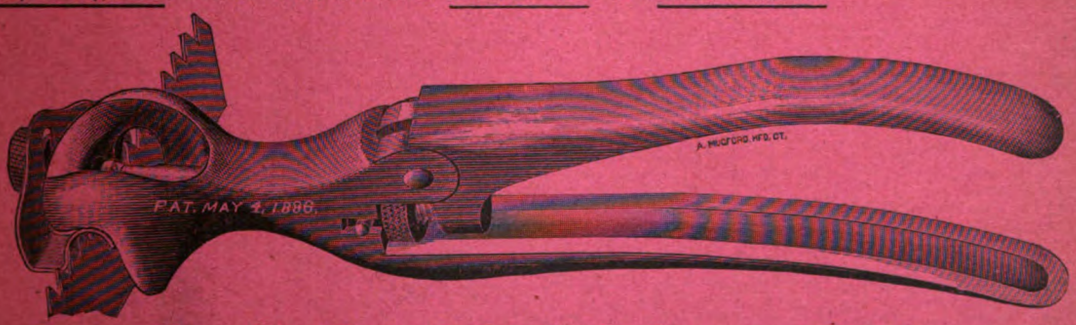
BUY IT and *TRY IT.*

A PERFECT MACHINE.

Where can you find a more complete statement of its merits or a more satisfactory recommendation of its value than the following:

A well-known and representative firm says: "We have had for sale EVERY KIND OF MEAT CUTTER MADE, and AFTER EXAMINATION OF THE MERITS OF EACH, have come to the conclusion that the LITTLE GIANT IS THE BEST OF ALL."

This season we are putting up with each Machine, WITHOUT EXTRA CHARGE, TWO PERFORATED PLATES for cutting FINE or COARSE. No Cutter better adapted to the Retail Trade than the LITTLE GIANT. All cutters thoroughly tinned. All parts well fitted.



Nos.	305.	With Clamp,	Weighs Complete,	5¼	lbs.	Cuts per Minute,	2	lbs.	Per dozen $35.00

The Peck, Stow & Wilcox Company,

Southington, Conn., and New York.

Only manufacturers of a complete line of Tinsmiths' Tools and Machines. All of their goods are made by the most experienced mechanics, and are fully warranted.

If you want the best goods, the best made, the best adapted to your work, you will secure those bearing the stamp of this Company. All of their goods are of the highest grade and of the best quality. Remember that wherever they have been exhibited in competition with similar goods of other make, they have been invariably awarded the first prize for superlative excellence.

They are not abreast, but ahead of the times. Other makers are imitators, not originators.

Compare their Cornice Brakes, Squaring Shears, Beading Machines, Double Seaming Machines and Forming Machines with other makers, and record your verdict. We will abide by it.

100,000 workmen in sheet iron and metals throughout the world are our references.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 29 Murray Street, New York City.

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate.

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be **the very best.**

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made **Smokeless Schultze Powder famous** all over the world, while its **hard flinty grain** and specially regulated moisture makes loading so easy that any amateur can now do so successfully.

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

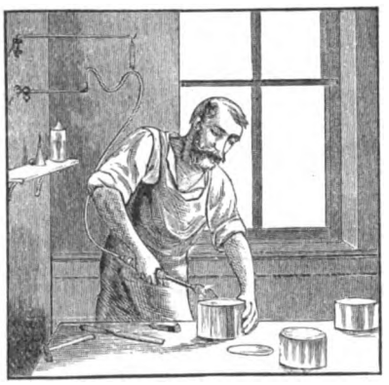
Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U. S. Agents

Von Lengerke & Detmold, 8 Murray St, New York.

Hardware Dealers Can Profitably Sell Bicycles.

There is a large trade in bicycles in all parts of the country and much of that trade belongs naturally to dealers in Hardware. Good bicycles meet with ready sale and pay a fair percentage of profit.



COLUMBIAS

are the representative high grade machines in America. A Columbia is the easiest machine to sell to the best trade because it is unquestionably the standard wheel of the world. We want enterprising agents of good standing and solicit correspondence.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

HOLIDAY GOODS.

Many kinds of Scroll Saws have been put on the market by ourselves and other manufacturers during the past twelve years Of these only a few have proved good enough to remain in demand. The call now is for a well-made practica machine, and all second-class ones are of slow sale.

Those who want a good Lathe with scroll-Sawing Attachment and all Tools and Improvements to the very latest moment will buy the Goodell Lathe.

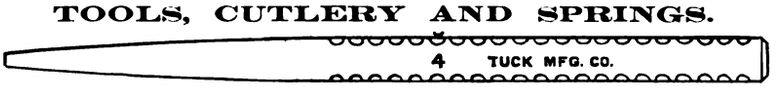
Those who want only a Scroll Saw with Drilling Atta hment and Rubber Blower will prefer the Rogers saw.

These two machines are taking the place of all others, and are now the most in demand throughout the world.

No dealer can make a mistake by laying in a stock of them. About Christmas time they are wanted in every town, and will make business lively at this otherwise dull season.

We also keep a full stock of Designs, Wood, and all other Scroll Sawing goods.

Price of Goodell Lathe complete, $12.00.



Price of Rogers Saw complete, $3.50.

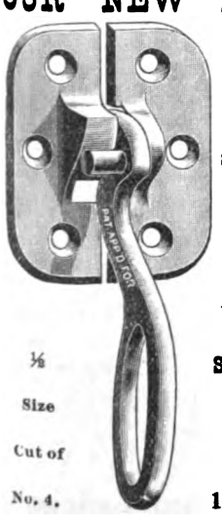
THE SUPERIOR SPRING HINGE FOR HOUSE GATES.

—— Surpasses all known gate hinges ever placed on the market.——

Patented Oct. 5th, 1892, Pat. Applied, 1893.

Tested Compound Springs, Rustless Finish.



WEATHER PROOF. Use 3 hinges on heavy or wide gates.

Half Size Cut.

A True gate hinge; swings both ways, does not raise the gate as ordinary hinges do, but opens level. Is self-shutting and always stops at the centre. Has no parts to get loose or out of place, and is easily applied. When adjusting tire bolts or wood screws may be used for both post and gate or either, thus covering all requirements. Any catch may be used with these hinges; none, however, are necessary.

OUR NEW AUTOMATIC FASTENER.

Good Times: The Last Barrier Removed.

With the elections of November, 1894, the business men of America have reason to feel that the last fictitious barrier against a return to prosperous times has been swept away. Standing upon the vantage ground of the present, we can well look back over the two years that have passed, with a renewed belief in the stamina, elasticity and courage of our country, for there certainly has been during that period one difficulty after another to surmount. We have encountered the financial disasters of the world, the demonetization of silver in India, the Baring failures, the agitation over the repeal of the silver question, and that greater agitation over the tariff question, which for months enabled Congress to hold the business of the country in its grip without possibility of escape, and until that laborious and slow-moving body should be disposed to come to a vote and allow the country an opportunity for breath. Congress had hardly adjourned before the agitation over the elections commenced. This was hardly necessary, but it was hard to persuade the country at large of that fact.

No matter what feeling one may have in regard to the result of the election, it certainly must be conceded that the settlement is decisive. With a Republican Congress, and a Democratic administration in control of the White House, it is reasonably certain that no man will endeavor to renew the tariff agitation for two years at least, and by that time the bitter experience of the past several years may have taught the American people that the tariff is a matter which should be handled by business men, as a business proposition, rather than a political question to be decided by the politicians. Meanwhile, the country will have an opportunity for breath and recuperation, and we feel that the effectual wiping out of the Populist party in the recent election, will dispose of the financial vagaries which that party has fathered, as effectually as the Ohio Idea, or the "rag-baby," was disposed of in Ohio in the days of William Allen and George H. Pendleton. It is a significant fact that in Ohio, where the Democrats declared for free silver, the Republicans won by a majority some thirty thousand larger than was given Vallandigham in the memorable campaign of 1863.

Out of it all, however, we must hold to the consoling fact that no one except pessimists of an advanced degree, can evoke from the affairs of the future any new phantom to stand in the way of business prosperity. The troubles in the Old World, so long as they do not touch us directly, are merely an incentive and an opportunity for a further development of our resources. It seems the part of practical wisdom for every man, to settle down to the conviction that upon him rests a part of the responsibility, and that it is his duty as well as his privilege, to do everything in his power to set the wheels of industry revolving with renewed activity. By so doing, and by casting the fears of the past away with the days that have gone with them, he will be doing the part of a patriot and at the same time working for his own personal success.

Bloomers, Bicycles and Loafers.

The Woman's International Cycle Club has had a recent session in New York, where, in addition to the important question of bloomers, was raised the point whether or not a woman bicycle rider should carry a revolver with which to defend herself against the attack of ruffians, or avenge herself upon the jeering and low-minded multitude. Some of the ladies present were very much in favor of the gun, while others thought that moral suasion, and the lapse of

Digitized by Google

time, would be more effective, and one representative of a pugnacious mind argued that the proper thing to do was to gently descend from the wheel and "slap the face" of the offending individual. "Slap him real good in the face," she continued. "If a man ain't worth slapping, why, of course, you have to let him go! I was the second woman to wear bloomers, and I have had some experience. I have always found when you slap a man once *real hard* he will let you alone."

This little contribution to natural history was received with encouraging applause, and it soon became apparent that there were more who were ready to support the slapping process than favored the guns.

It is to be regretted that upon this important occasion some lady well posted in bicycles and their accessories did not arise and suggest that the same treatment should be accorded the jeering crowds along the roadway, that has been found so effective in the treatment of dogs. There is manufactured a little instrument which consists of a bulb and a nozzle, containing a few drops of diluted aqua ammonia. The same can be easily held within the delicate palm of the smallest among lady riders. The slightest pressure will send a stream of this most effective liquid into the eyes of the loud-mouthed by-stander, and will keep him busy with his own affairs for a few agonizing moments, while at the same time doing him no permanent injury. We recommend this bulb or some similar weapon to the attention of the Woman's International Cycle Club. With it, a very effective lesson in road etiquette will be taught, while not at the same time subjecting the rider to the necessity of wading through the gore of her fellow-man, to the penitentiary or the electrocution chair.

H. J. Brainerd, formerly connected with the Payson Mfg. Co., of Chicago, has opened an office at No. 97 Chambers Street and No. 81 Reade Street, New York City and will establish a general brokerage business in Hardware. He will devote himself carefully to overlooking the Hardware market, selecting such bargains as may happen along. He is prepared to buy all lines of goods in any quantities, including Hardware specialties, and will give his customers the advantage of his experience in the number of years he has been connected in the line of business he has undertaken. Naturally he wishes to extend his interests, and in this respect will be glad to represent manufacturers of Hardware specialties from any section of the country.

George P. Benjamin, No. 104 Chambers Street, New York, is placing upon the market the Crown cold handle griddle. This griddle consists of a sheet of heavy asbestos of the finest quality, the same being covered completely with heavy sheet steel, and the two are held firmly together by a corrugated metal rim. It is especially adapted to gasoline, oil or gas stoves, and may be used equally well as a stove mat. There are two sizes of this griddle, nine and thirteen inches, the latter being very deep, allowing it to be used for scrambling eggs and many other purposes. Cakes on this griddle may be browned thoroughly and uniformly without risk of burning.

The Union Wire Goods Co., Cincinnati, Ohio, who controlled the manufacture of corn poppers, flour sifters and fly traps in this country, have dissolved, the members of the combination failing to keep up prices. As a consequence, certain corn poppers, which have sold at eight dollars per gross, are now being placed upon the market at six dollars.

Sixty millions of people will use up a certain amount of goods, hard times or good times. We are about at the end of the visible supply, and consumers have economized about as long as they can. New goods will therefore have to be manufactured to take their place.

The Buckeye Churn.

The Buckeye Churn Co., Sidney, Ohio, are still pushing the Buckeye Churn with no small degree of success. They have built themselves upon the principle that concussion "brings the butter," and the rewards that have repaid their efforts certainly prove that they are upon the right track. They say: "The principle of concussion is the only true one for making granular butter. Anything having floats or paddles has a tendency to break the grain and produce salvy butter. The Buckeye Churn is on this principle, and for cheapness, simplicity, strength, durability and ease of operation, cannot be excelled. They have been thoroughly tested by the very best dairymen and butter makers in this country, and certified to be the most practical churn now in the market, while 20,000 of them are in satisfactory use, and the few out of many testimonials we have from the dealers extensively handling them corroborate the claims of the manufacturers." They will be pleased to send prices and detailed descriptions upon application.

The Hardware Merchants' and Manufacturers' Association of Philadelphia, will hold a meeting at the Hotel Metropole, Philadelphia, on the evening of November 20th, at which will be discussed the question whether or not the present system of syndicate buying is advantageous to the trade.

J. A. H. Dressel, New York, treasurer of the Sportmens' Exhibition which will take place at Madison Square Garden next year, reports that all arrangements are progressing expeditiously. The prospectus and space plan is nearly ready, and will be issued within a few days.

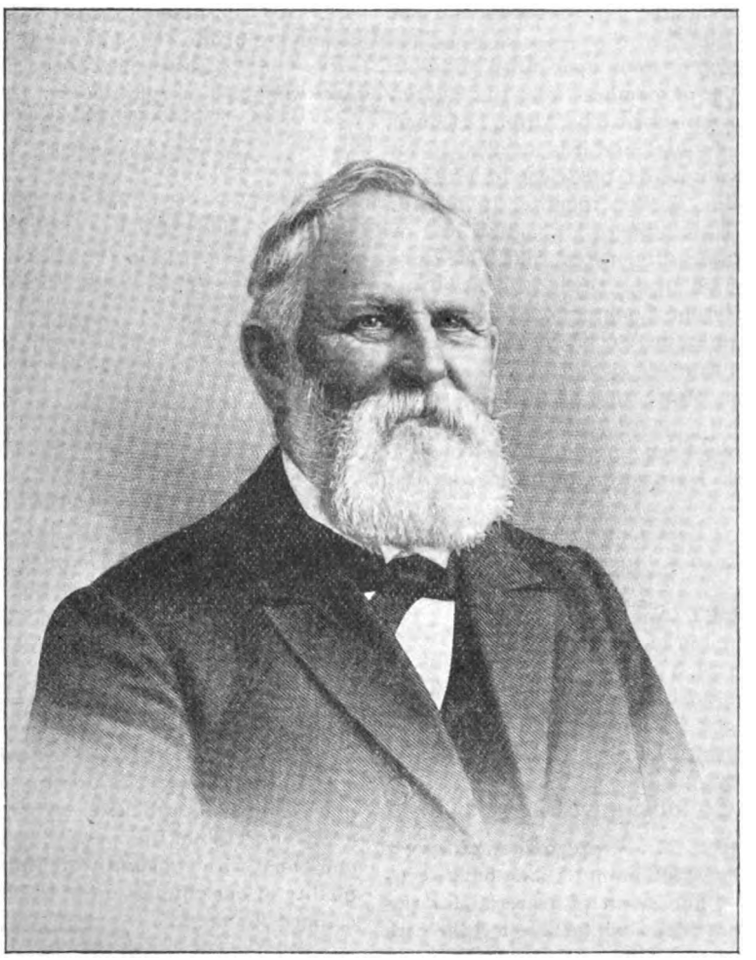
Among the many handsomely bound catalogues in the library of the Hardware Club there has been lately added one from the Van Wagoner-Williams Hardware Co., which for uniqueness in binding deserves and commands special attention.

The American razor men report a very fair business. The factories are not yet running full time, but the indications are that they soon will be. The American cutlery manufacturers also report a good business.

The largest tin-plate factory in the United States, it is said, is to be located at Anderson, Ind. It is to comprise twelve mills, and to include the rolling mills for the manufacture of the black sheets.

C. W. Graham, Hardware merchant, of Winnipeg, Man., announces that after November 1st, he intends to abolish the credit system and sell for cash only. Good luck to him.

"FIN-DE-SIECLE" HARDWARE.



"A RIVETED BOLT.

Hon. Samuel Winslow.

A BRIEF REVIEW OF A LONG AND USEFUL LIFE.—HIS BUSINESS AND PUBLIC LABORS.

In the issue last preceding, mention was made of the death of Hon. Samuel Winslow, the founder of the Samuel Winslow Skate Mfg. Co., and ex-mayor of the city of Worcester, Mass., which was his home. In this connection, we are permitted to give more extended notice of his useful and beneficent life, and to accompany the same by a portrait of the deceased. Mr. Winslow came of an excellent stock and was born in Newton, February 28, 1827, a descendent of Kenelm Winslow, brother of Gov. Edward Winslow of the Massachusetts colony. He received his early education in the schools of his native town. After leaving school he was employed in the manufacture of cotton machinery, in which he displayed great industry and inventive skill. So rapidly did he advance that at the age of twenty he became foreman in this shop, with over fifty men under his charge. He removed to Worcester in 1855, and on April 1st of that year formed a partnership with his brother, Seth C. Winslow, and started a machine shop. In 1857 they began the manufacture of skates, in which they were especially successful, pecuniarily, in connection with other branches of manufactures. The works were first located in the old Merrifield building in Cypress Street, and they remained there for twenty-one years, after which they were removed to the new machine shop erected by Mr. Winslow on the corner of Mulberry and Asylum Streets, the increasing business demanding more extensive quarters. At the death of his brother in 1871, Mr. Winslow assumed entire control of the business, and continued it alone until the formation of the Samuel Winslow Skate Mfg. Co. in May, 1886, in which Mr. Winslow retained a majority of the stock, afterwards serving the corporation as its president and treasurer.

Mr. Winslow began his public career in Newton Upper Falls in 1848, as a member of the prudential committee for the employment of teachers and the charge of the schools in that village. He was soon after elected clerk of the corporation which organized the Boston & Woonsocket division of the New York & New England Railroad. Mr. Winslow was a member of the Common Council of the city of Worcester in 1865 and 1866; a representative from Worcester in the general court in 1873 and 1874; alderman of the city in 1885; and mayor by successive elections by large majorities for four years, from 1886 to 1889, inclusive, testing his strong personal popularity. He was trustee of the Worcester County Mechanics Association for four years—1868 to 1871—inclusive; vice-president in 1884 and 1885, and president of the association in 1886, declining a re-election to the latter position in 1887 on account of his duties as mayor. In December, 1888, he was elected a director of the Citizen's National Bank, re-elected the following year and chosen president of the board. He had been a trustee of the People's Savings Bank from January, 1889. He was also a member of many Masonic bodies.

In the last three years of his life, Mr. Winslow was prominently identified with suburban street railways. He was president of the Worcester, Leicester and Spencer, the Worcester and Millbury, the State Central and the Blackstone Valley Street Railway companies, and up to the time of his confinement to the house was actively engaged in the duties of his different offices.

As president of the Worcester, Leicester and Spencer and Worcester and Millbury roads Mr. Winslow demonstrated his great executive and administrative powers. His purchase of the Stonewall farm at Leicester, now the home of his son, Col. Samuel E. Winslow, led to his interest in the organization of the Worcester, Leicester and Spencer road, the largest electric street railway in the world at the time of its completion.

He was married in 1848 to Miss Mary W. Robbins, who died in June, 1893. Two sons were born to them, Frank E., of Boston, and Samuel E., both of whom survive him. Mrs. Winslow's death was a severe shock to Mr. Winslow, the effects of which were quite apparent to those who were near to him. During nearly twenty-five years of married life Mr. Winslow had been strongly devoted to his home fireside, and, with the exception of public occasions during his service as mayor, went about very little. Though not averse to the duties and functions of social life, they did not attract him, and he much preferred the happiness and contentment of domesticity. He accumulated some wealth during his lifetime, and was a liberal giver to worthy objects, although his charities were never heard of except through the beneficiaries. His mother was an earnest Methodist, but Mr. Winslow was of more liberal convictions, and was quite a regular attendant of the Church of the Unity.

It seems but appropriate in this connection to voice the opinion of those who knew Mr. Winslow best, by quoting these words from the leading journal of the city of his home as to his life and usefulness: "In the death of Hon. Samuel Winslow, Worcester loses one of her most representative men. Especially was Mr. Winslow well-known in all that concerned the material progress and development of this city. Prominent as a manufacturer, business man and benefactor of worthy objects and institutions, he did his part as a local legislator, and filled the important office of mayor with credit to himself and honor to the city. But it is perhaps as the successful promoter and acting manager of the suburban railway system, now of such incalculable benefit to all the interests of this city, that the late Mr. Winslow will be longest remembered. It was an undertaking whose present complete success has more than justified its founders' sanguine and wisely entertained expectations. The premature taking off of Mr. Winslow is a distinct loss to the city."

The Iron Clad Mfg. Co., New York, are thirty days behind their orders on some lines of goods, being especially pushed on enameled ware. It is with gratification that HARDWARE is enabled to truthfully print such items as this, for it shows that the hard times are slowly but surely passing away.

Digitized by Google

Hardware Club Notes.

At a late meeting of the board of governors of the New York Hardware Club a resolution was passed expressing to Charles Morrill, No. 35 Warren Street, New York, the cordial thanks of the board in behalf of the club, for the handsome and valuable oil painting which that gentleman had presented the club, and which now adorns the walls in a prominent position in the main dining hall. Mr. Morrill is the possessor of a very handsome collection of paintings, and has shown his artistic faculty by the character of the pictures which form the same. The one in question is entitled "The Shepherd and his Sheep," and was painted by Henri de Buel of Brussels. It represents a shepherd and his dogs watching with kindly care over a flock of sheep. It is handsomely framed, and is the admiration of all who visit the club rooms; and the thoughtful generosity of Mr. Morrill in presenting the same, has been very favorably commented upon by those who have seen it. There have been also hung upon the walls of the club six oil paintings loaned by the artist, N. A. Moore, of Kensington, Conn. At a recent meeting a vote of thanks was also tendered Mr. Moore for the loan of this collection.

The Hardware Club rooms were kept open until midnight on Tuesday, and a large number of members were there entertained by hearing the election returns read by Alfred D. Clinch. A special wire was run into the rooms, and it is needless to say that the enthusiasm grew in volume as the electric wire and electric eloquence of the reader, worked together in relating the exciting news. The thoughtful care of Mr. Clinch had resulted in the preparation of three fifteen-foot rolls that hung from the ceiling, upon one of which was the presidential vote of 1892; vpon another the present Congressional representation; and upon the third the present Assembly representation —and comparisons could thus be made at a glance.

Col. Benj. S. Lovell, Boston, Mass., was among the recent visitors at the Club Rooms.

The following gentlemen have been unanimously elected to membership in the New York Hardware Club since our last report:

John F. Anderson, Jr., No. 34 Beekman Street.
Oliver P. Buel, No. 261 Broadway.
John Day; H. L. Judd & Co.
George A. Driggs, Waterbury, Conn.
Edward Hassett. No. 271 Broadway.
W. B. A. Jurgens, Brooklyn, N. Y.
William Langdon, No. 5 Beekman Street.
Charles K. Paddock; Paddock & Kleine.
J. Albert Van Winkle, Paterson, N. J.

The A. J. Phillips Co. on Snow Shovels.

The A. J. Phillips Co., Fenton, Mich., are manufacturing a bent blade Snow Shovel with a steel point. They have accumulated an unusually large and fine stock of material for the coming season, and declare that they shall be able to take care of their customers in even better shape than usual. They make the statement "that there was never yet a snow shovel produced that will handle more snow" than the one they are offering. "This is on account of their being so light, and so well formed for loading and unloading."

Their factory is running right along on Screen Goods for the season of 1895. They are especially anxious to take care of their workmen, and announce that they will "pile up the goods even if we have to make prices lower to dispose of them."

Alfred Field & Co.

Alfred Field & Co., No. 93 Chambers Street, New York, importers and dealers in Hardware, cutlery, guns, railroad and mining machinery, and for whom A. H. Saxton is the New York representative, have issued a catalogue of their line of goods, comprising 128 pages in octavo form, well illustrated, and embracing a surprising variety of articles which enter into the line of Hardware carried by dealers. The house has branches in Birmingham, Sheffield and Liverpool, England; Solingen and Hamburg, Germany, and Liege, Belgium. Being agents for Joseph Rodgers & Sons, of Sheffield, England, it is interesting to note the annual output of that firm, which consists of two million table knives and forks, one million six hundred thousand pocket and pen knives, one hundred and fifty thousand carving knives and forks, eight hundred thousand razors, and five hundred thousand scissors.

Alfred Field & Co. are sole agents for Joseph Rodgers & Sons; Peugeot Freres; Coates Clipper Mfg. Co., horse and toilet clippers; Eley Brothers, London, percussion caps, gun wads, cartridge cases and sporting ammunition; L. Hugoniot Tissot, French plyers and small tools; Isaac Greaves, sheep and garden shears; W. K. & C. Pearl, grass hooks, scythes and straw knives; R. & J. Linacre, grass hooks, sickles and scythes, and Webster & Horsfall, steel wire.

Sixteen Excellent Rules.

In the course of his extended and useful business career, Russell W. McKee, of Bruce & Cook, New York, has by observation and experience proved the value of a number of things, the good of which knowledge he is pleased to share with others. He has summed some of these up in a little card upon which are printed the following

SIXTEEN GOOD RULES FOR SUCCESS IN LIFE.

1.—Keep good company or none. Never be idle.
2.—If your hands are not usefully employed, attend to the cultivation of your mind.
3.—Live up to your engagements. Keep your own secrets, if you have any.
4.—When you speak to a person, look him in the face.
5.—Good compary and good conversation are the very sinews of virtue.
6.—Good character is above all things else.
7.—Ever live (misfortunes excepted) within your income.
8.—Make no haste to be rich, if you would prosper.
9.—Never play at any game of chance.
10.—Earn money before you spend it
11.—Never run into debt, unless you see a way to get out again.
12.—Never borrow if you can possibly avoid it.
13.—Do not marry until you are able to support a wife.
14.—Be just before you are generous.
15.—Be temperate in all things
16.—Save when you are young, to spend when you are old.

The Coates Clippers.

The Coates Clipper Mfg. Co., Worcester, Mass., make the following announcement under date of November 1st: "It gives us great pleasure to inform you that we transferred the agency of our goods to A. Field & Co., No. 93 Chambers Street, New York City, on January 1, 1894, and they continue to hold the same, notwithstanding any misrepresentation that may be made to the contrary. They carry a large stock of our goods, and will be pleased to receive your inquiries and quote you factory prices. Their long established business reputation is a sufficient guarantee of prompt attention to all orders and inquiries entrusted to them. We assure you that we shall use every effort, as in the past, that skill and modern appliances, combined with constant watchfulness can furnish, to keep the quality of our clippers up to the high standard we have always claimed for them."

The Standard Tool Co., Cleveland, Ohio, announce the addition to their line of Flat Spring Keys and Spring Colters. The latter are made by special machinery and highly finished and well pointed and shaped. The Flat Spring Keys, they say, are uniform in size and jointed, and made of any width or length desired.

Ammunition men say that it is very difficult to fill orders on account of a scarcity of shells, the manufacturers being far behind in their orders.

Question and Answer.

HARDWARE: I have read your article "A Novel Desk Light" in the last number of HARDWARE. If you can inform me where I can buy the fixture, you will very much oblige Yours respectfully,

Maryville, Mo. ADOLPH LIPPMAN.

The above-named article was seen by a reporter of HARDWARE in a New York store, but the gentleman upon whose desk it appears, has forgotten the name of the party from whom it was purchased. If anyone will inform us, or inform Mr. Lippman, as to where the same can be purchased, such information will be gratefully received.

Six Letters To a Clerk.—VI.

A PERMANENT SITUATION.

Among all clerks, my dear Tom, there is a feeling that, sooner or later, they are to be members of the firm and doing business for themselves. That every young man should look forward to this, should use all his energy to push himself into such a position, is very natural and all for the best, but you will not have to look far among the business houses on your street to see that, at the best, the percentage of clerks who become merchants is not large. You will see gray headed men at work over the books and among the stock, who are clerks, and who have been clerks all their lives. There are very plain reasons for this state of things.

The largest houses in trade have not been built up by a firm composed of several men; even though there may have been several names in the firm, you will find that there is one among them who really was as much director and master as if his partners were only so many clerks. And instead of thinking to yourself that these men must have been "soft" to allow themselves to be thus controlled, you may put it down to their credit that they were wise enough to let the best man lead.

A wise merchant wants just as few partners as he can possibly get along with. If he has genius for his trade he can invent for the others to carry out, but oftentimes the carrying out can be done much better by a clerk than by a partner. The chances are the partner had a scheme of his own for doing the same thing; he has been compelled to drop his method and substitute this, and in his heart he will not be very sorry if this plan shall prove a failure. This is no uncommon feeling in business; the amount of friction constantly generated in business partnerships is not understood by anyone who has not had experience of it. But when the merchant turns to a clerk and says: "I want this done so and so," he knows that the clerk will have an interest in doing it well and in being successful, lest failure may be laid on him. Though an army contains numberless captains and colonels and generals, there is but one commander-in-chief.. So in business; however well the arrangement of duties among clerks and partners, there must be one mind among all that is supreme.

It is in the nature of things that there shall be more clerks than merchants, and while your constant aim is to push yourself up among the merchants, you should not overlook the fact that your place may be among the rank of subordinates for a great many years, if, indeed, it is not to be always there. And if you are to be a clerk always, there are two points that must be looked after: first, that you shall be so far proficient in your position that you can be sure of a steady place; and next, that you systematically save a part of your income for a time of need or inability to work.

The man who is surest of steady employment is not the one idea man; such a man is a peg that can only fill a very peculiar hole, and he may search for months and years for just such a situation as he has lost and even then not find it. Say that you have had charge of the stock and lose your place; you have been so long at this work that you know but little about selling goods and nothing about making bills or keeping books. If you were to accept a situation at either of these latter two tasks you could not expect more salary than beginners usually receive, and you could not think of going to work for such pay, so you search through the city for a house in need of a stock man and find none.

Now the experience of every merchant is that while a man is pushed forward in position and salary because he is unusually proficient in some one place, it is far oftener the case that the man who can fill several places well is the most valuable in the store, and the one who is never allowed to be out of work for a very long time. If through some turn of the wheel he loses his position as stockman he is ready for the first vacancy he finds, be it as salesman or bookkeeper. I am aware that in some of the largest houses this is not very practicable, but I am a firm believer in the adage about the will finding a way. In a small establishment there is no difficulty in getting posted in every department of the store, and I have yet to see the employer who was not willing that his men should thoroughly learn everything in the store to be learned.

The salary of a clerk is at once a curse and a blessing according as he uses it. If he spends every cent of it, knowing he is going to have just so much to spend, it is a curse; but if he guides his expenditures so that he shall save so much every year, then it is a blessing to him, for it enables him to regulate his wants. There are men, men of mature years, men of families, who look upon a salary as a figure that they are expected to expend yearly; an increase of salary means an increase in expenditure, and though it would seem an easy matter to cut off some of these extras should the salary grow smaller, in reality it is by no means easy; when one has indulged in a luxury long enough he begins to consider it a necessity.

I knew a man who, on a salary of $900 a year, raised a family and bought and paid for a comfortable little home. A change in the firm he was with benefited him by an increase in salary, and eventually it reached the sum of $1500 a year. One would think that if he had been able to live on $900 he ought to save a snug sum yearly on $1500; but he did nothing of the kind; the increased salary allowed him to indulge in a horse, his wife more expensive bonnets, and his daughter in a piano and music teacher, and the truth was he found it harder work to make both ends meet than he had in the old days. And when his affairs were probated last spring, his entire property consisted of the house and lot he had paid for when he was working for $900 a year.

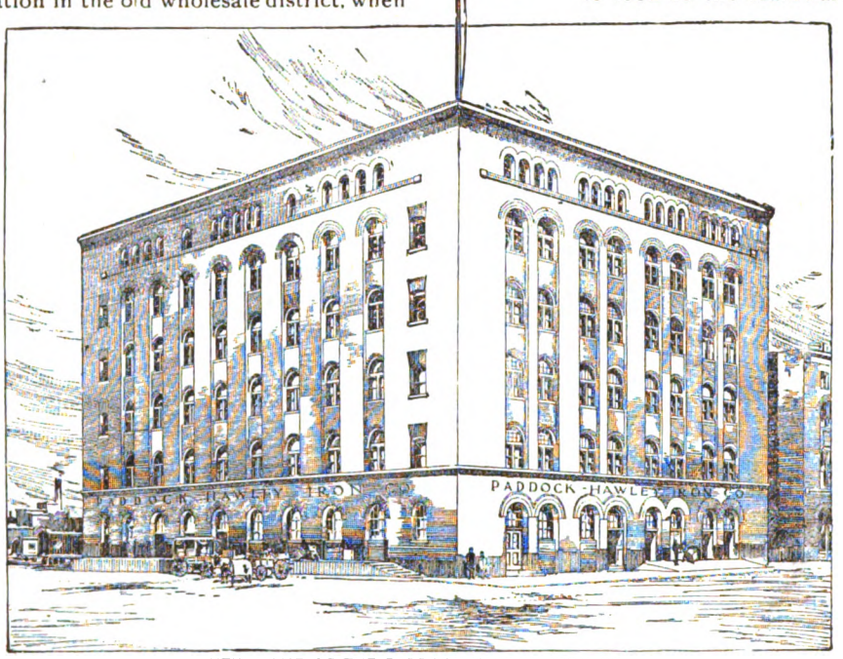
There is another point in connection with the subject of this letter that I was in danger of overlooking, and it is this: no clerk is justified in doing that for an employer which will damage his own reputation. I do not refer to the little everyday affairs of trade wherein glibness of tongue leads a clerk to claim more for the goods than they can bear; no sensible merchant will ask or allow such service, but there are positions wherein merchants are sometimes so placed that the endorsement even of their clerk will be a help to them and bridge over the difficulty. But a clerk should hesitate to make a statement until he knows exactly what he is stating, and then if the truth will not help his employer he can remain silent; to make a false statement may temporarily help his employer but it will not help himself.

I am reminded to speak of this because of an incident of very recent occurrence. A creditor asked a merchant for a statement of his affairs and the statement was sent in the handwriting of the head clerk, who personally vouched for its being correct; it showed the employer to be solvent beyond doubt; but within thirty days of that time the merchant suspended payment and made another statement to his creditors, this time showing himself insolvent by a large sum, and there had been no losses between the first statement and this one. Now one of them was false, and the last one proved the correct one. Of course the clerk had damaged his own reputation irretrievably, and had not benefitted his employer. An employer has no right to ask a clerk to do such work, and if he does ask it the clerk is a fool who accedes to the request.

As my letters draw to a close, my dear Tom, I cannot help thinking that advice is practically of little use. If a young man is quick witted and has taught himself to think, he finds out all these things for himself; if he is stupid and dull and has no ambition, he will not accept advice though it came from one much better qualified to teach than I am.

AN OLD MERCHANT.

New York, November, 1894.



HARDWARE announces, with commendatory words, that "a society among merchants and traders out West has been formed in which the members agree that they will not hold conversation about hard times, dull trade, small orders, slow collections, low prices of wheat," etc. An excellent idea. And if the times keep mending the society will get rich off the fines imposed upon members too busy to attend its meetings—*Philadelphia Record.*

"There never has been an improvement made in the wheelbarrow or in kissing."—HARDWARE. When a man is wheeling a wheelbarrow he cannot very well be engaged in any other employment.—*New Orleans Picayune.*

New Home of the Paddock-Hawley Iron Co.

It is with pleasure that we show in this connection the new building, recently occupied by the Paddock-Hawley Iron Co., at the corner of Tenth and Spruce Streets, St. Louis, Mo. The building represents the most modern ideas in store and warehouse construction, and is the realization in stone, brick and iron, of twenty-five years successful business of the corporation and the firm which was its predecessor. The design and equipment is especially arranged for the quick and economical handling in and out of store, of the heavy tonnage of this business. Freight is received from and delivered to the railroad companies at the door. The elevator service is of the most improved pattern. The company operate their own steam and electric light plant, and also have an interior telephone system. Thus it will be seen that every detail for the successful transaction of business has been studied. It is worthy of note that the building is the largest under a single roof, occupied by one firm for mercantile purposes in the city of St. Louis, and the largest business of its kind in the country. The original business, of which the Paddock-Hawley Iron Co. is the successor, was established in 1869 and has grown steadily since that time, being incorporated in 1881. In November 1893 fire destroyed the former business location in the old wholesale district, when this company decided to occupy their present improved location. This move not only represents the progressive business instinct of new St. Louis, but coming in these times of business depression, is one of the strongest evidences of the long looked for revival of trade and business enterprise.

NEW HOME OF THE PADDOCK-HAWLEY IRON CO

Prosperity in Meriden.

The month of October has shown a decided increase of business and a much more healthy activity among the varied industries of this city, in marked contrast with the situation during the past year. All the larger concerns report a general revival of trade, and the opinion is unanimous among the manufacturers that the indications point to a busy and prosperous season. Factories which have not been working more than half time are now pushing to their full capacity, and in a few some of the departments are working overtime. The cutlery interests are, perhaps, the most affected by the revision of the tariff and next to them are the diversified interests of the Charles Parker Co. Both are now feeling the stimulus of the general revival in business and have resumed the running of their works upon largely increased time. At the Meriden Britannia shops the employees are putting in fifty-nine hours per week, and a few of the departments have been called upon to do extra time.—*Hartford Times.*

Wisdom From the Corner Desk.

The Man at the Corner Desk of the W. Bingham Co., Cleveland, Ohio, has this month something to say of new lines of goods that the retail dealer should handle:

"Hardware merchants all over the country are casting about for lines that pay the old-time profit, and take up readily with goods that have hitherto been thought to belong to other branches of business. A number have taken up with cycles, some have added sporting goods, others have increased their line of house furnishing goods by adding many outside articles, etc., etc., and it is in these changes and the transformation of the modern Hardware store that the reconstruction consists. The goods that are being taken up are generally such as add to the attractiveness of the store, and when the trade gets finally settled upon its new basis it will be found to be the gainer in more ways than one. The cutlery show case furnishes, perhaps, the most ready inlet for new goods. In the first place, cutlery and kindred lines pay a good profit, and then they afford more opportunity for amplification. Every Hardware store sells pocket knives, and it is easy to add say a few revolvers, silver match safes, manicure sets, etc. Table cutlery, also, forms a good basis for building up a stock of fine goods that pay well. The common steel knives and forks and German silver spoons must be carried, and naturally lead to better goods of the same kind and to other articles of necessity or luxury—fruit knives, sugar shells, orange spoons, butter knives, butter spreaders, salad forks, salt spoons, pie knives, nut picks and cracks, carvers of all kinds and degrees of excellency, case goods, oxydized, satin, bright and gilt goods in patterns and styles without number.

"A good many of the Hardware merchants are adding such goods a little at a time and building up a salable line of flat silver ware, and people are growing to look to the Hardware stores for such goods rather than to the jewelers who had this trade to themselves. It will pay you to familiarize yourself with the table ware and fine cutlery your jewelers carry and the prices they get, and then get figures from your jobber on similar goods, and note the margin. A little money judiciously invested will give you a line, with a few cases for display purposes, and you will find that the people who come to you to buy their kitchen furniture will also buy their table silver ware. Having such goods will bring persons to you to buy presents for weddings, birthdays and Christmas, and will, through a natural association of ideas on the part of the public, give you a reputation for handling fine household goods. Besides, you are keeping up with the times, and that is quite important to do just now."

Poetry and Trays.

A valued correspondent forwards the following improvement upon Longfellow, which he has lately discovered in his wanderings up about Syracuse:

Should you ask them
Why they gleefully rub their hands
'Till the hour glass runs out its sands;
Why the busy merchants are all smiles,
Why their many customers come for miles,
Why these bright arrays and brilliant displays;
They would answer, they would tell you
"Why? nothing, but Campbell's wonderful Sliding Display Trays."

Should you ask them
Whence they came from,
Whence these Trays that are so welcome,
Whence this admiration and attraction;
They would answer, they would tell you
"Write for prices and description,
(As these Trays are all the 'go,')
To Syracuse, N. Y., addressed to Campbell Cutlery Co."

The Economy Gas Stove Co. will manufacture gas and vapor stoves at Decatur, Ill.; $5,000 capital.

Western Combination Washer.

Among the many labor-saving contrivances for the household, the washing machine has played a prominent part in this progressive age; it overcame prejudice to such an extent that it now occupies a prominent place among the staples in the Hardware and woodenware lines.

The Horton Mfg. Co., Fort Wayne, Ind., are one of the pioneers in the Washing Machine business, and not a little to their persistency and honorable methods, is to be credited the confidence which has been established in these goods among dealers throughout the country. Their aim has been to keep the product above criticism, and their guaranty has invariably

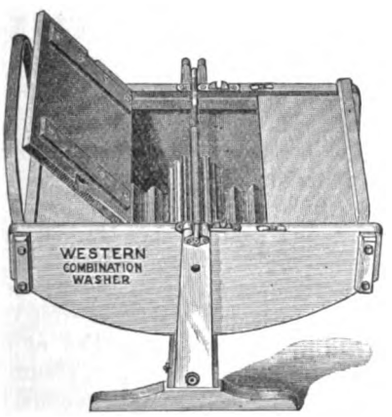

FIG. 1.—IN POSITION FOR OPERATING.

accompanied their statements, so that their machines have become so widely known throughout the United States that their brand is sufficient to insure confidence.

The Western Combination Washer, represented in the accompanying illustrations, is the latest addition to their extensive line of Washers, and as designed to meet the wants of the consumer, which are effectiveness and ease of operation. "The construction of the Western Combination is simplicity itself, inasmuch as there are no gear wheels to get out of order, break, or wear out; for this same reason the Washer is almost noiseless in operation. The rocking motion of the machine operates the corrugated wood roller, which swings back and forth in opposite directions to the motion of the box, in this manner producing the essential elements to successfully wash clothes—rubbing, squeezing and rinsing. The roller revolves on its centre, and also adjusts itself vertically to any quantity of clothing in the box, at all times resting on the same with sufficient

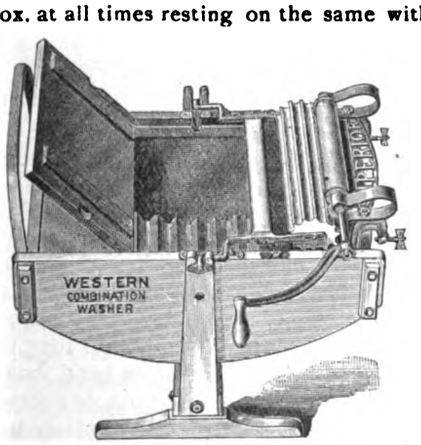

FIG 2. LOCKED FOR USING WRINGER.

weight to produce the necessary action for quick and satisfactory work. By a very simple contrivance the machine is locked so that a wringer can be attached and operated without tilting it." Long experience in the washing machine business has established the fact that the greatest objection to such machines is the hard labor and the abundance of water required. These points have been the guide post in devising and perfecting the Western Combination Washer, and the manufacturers guarantee that it "successfully overcomes these objections, in that it is operated with the least possible effort and requires only about three pails of water." Thirty days' trial is allotted to each machine at the risk of the manufacturer. Another reason which is advanced why the Western Combination Washer "should be received with open arms by the dealer," is that "they can be sold with complete satisfaction and at a fair and legitimate profit. Owing to the great similarity of other washers in the market, and the additional fact that they are handled so generally, competition has been so strong that in many cases dealers have been obliged to sacrifice their profit in order to make sales. Such will not be the condition with this machine, as it is entirely new and novel, and is certain to command a ready sale wherever offered." Dealers everywhere are advised to write the manufacturers for particulars.

A View from the Hardware Club.

TO THE EDITOR OF HARDWARE: I had the pleasure of visiting the Hardware Club of New York to-day, as a guest of a member of that great organization, and I wish you would allow me space in which to suggest that every Hardwareman, little or big, old or young, wholesale, retail, or a manufacturer who visits New York, should pay a visit to that delightful centre of the organized trade of the metropolis. I had expected to see something good in its way, but the realization far exceeded my expectations. A swift-moving express elevator carried us to the fourteenth floor with great rapidity. Of course, the first thing that attracts the attention is the rich and artistic manner in which the rooms are finished and furnished, but that which most emphatically strikes a visitor from the country, is the magnificent panorama of New York City and its surroundings which is unrolled at his very feet. From the various windows of the club rooms can be seen every point of the compass. To the north, the eye reaches almost to Central Park; to the northeast you can see the East River and the suburbs beyond, and the islands which dot that expanse of waters. Farther down come the Brooklyn Bridge and Brooklyn; then Governor's Island, Staten Island, the Narrows, Statue of Liberty; across to the right lies the magnificent Hudson—or North River, as these descendants of the Knickerbockers call it—while on the opposite shore is fair New Jersey, carried back from Jersey City into the mountains beyond Orange. This afternoon, upon the occasion of my visit, the air was clear of all dust or fog—no soft coal smoke as in the West—and as the flood of autumn sunshine poured down upon the scene, even I, a prosaic business man, felt impressed by its beauty, clearness, brightness, and artistic combination of land and water, of buildings and sky.

Any Hardwareman visiting New York, will find a most cordial welcome at the club rooms, to which he will easily find entrance through some acquaintance in the trade of this city. I desire in this connection to say for myself, that I was most hospitably entertained, and that I am looking forward to my next periodical visit to New York, with an anticipation of pleasure which no hotel life in this great city has ever been able to create within me.

Respectfully yours,

O. U. T. OFTOWNE.

New York, October 17, 1894.

A Handy Polishing Mitten.

The patient housewife, or the man-of-all-work about the Hardware store, certainly must hail with great pleasure the advent of an article of the character of the Handy Stove Polishing Mitten, which not only does the work for which it is designed, thoroughly and well, but saves the hand from a great deal of exposure to damage and blacking. This mitten is made to fit the hand, has a waterproof back, while the front is made of durable and soft sheepskin, tanned with the wool on. It not only is useful in stove polishing, but may be used for polishing furniture, cleaning and washing windows, show-cases and other glassware, polishing bicycles, machinery and even boots. The manufacturers guarantee that it cannot scratch the most delicate material or varnish. The mitten is made by the Handy Stove Mitten Mfg. Co., No. 122 Pearl Street, Boston, who will be glad to quote prices to any Hardware or stove man who may be interested, and will send a sample by mail for twenty-five cents.

HARDWARE is published for men now on earth.

J. H. Cort & Son's Coal, Oil and Gas Stoves.

J H. Cort & Son, on the corner of Adams and Water Streets, Brooklyn, N. Y., are among the largest manufacturers in the country of Coal, Oil and Gas Stoves. The original firm commenced business in 1823, and six years ago the making of gas and oil stoves was added, and great attention paid to the manufacture of these two lines. The firm in the last two years have twice extended their works, until now they have a floor surface for manufacturing, of thirty thousand square feet.

They have from time to time made improvements in their machinery, so that with the exception of castings, they make in their works everything that enters into the construction of gas and oil stoves. In the oil stoves, the founts for the heaters are made in a manner different from the mode of other manufacturers, both the tops and bottoms of the oil fount being doubly reamed on. Usually the top is sprung on, but this has its disadvantages which are overcome under the new method.

The illustration accompanying this article is a new Gas Radiator which they are now placing upon the market. This Radiator is made in three sizes, and in two finishes, brass and nickel. The Radiator is in all ways highly ornamental, having in the heating column a casting used as a setting for colored glass jewels, which reflect the gas flames in a sort of kaleidoscopic form. Then there is a handsome urn at the top, for the usual purposes of water evaporation, more necessary, according to popular opinion, in gas heating than any other. There are features in its construction such as large radiating tubes, large burner pipe with also a large gas way in the cock, which naturally allows of a good supply of gas at all times. The Radiator is made both with a direct draft and a revertible flue. The latter is somewhat unique in its form and utility. The flue is divided in the centre, longitudinally, almost to the top. This has the effect of propelling the heat from the flame upward, but it is not allowed to escape there. It is forced downward through the other side to the floor, where it passes through perforations to a spot where it is more needed.

The Oil Heater, which is illustrated in the advertisement of J. H. Cort & Son, to be found in another column of this issue, has been placed on the market this year. It is entirely new in design with extra large illuminating and heating power. It is elegantly finished with twisted brass pilasters supporting the base cap, the drum being of planished brass with a return flue giving great heat, while the large mica section gives a superior illumination. The enterprise of the firm is worthy of note, and their efforts have met with substantial reward.

The Latest Catalogues.

John Chatillon & Sons, Nos. 85, 87, 89, 91, 93 Cliff Street and No. 12 Jacob Street, New York, have issued a new catalogue of their manufactures, and the goods for which they are agents. The book is an octavo of 248 pages, handsomely bound and finely illustrated. The firm are the sole agents for the sale of all butchers' cutlery made by Foster Bros. Co., Fulton, N. Y., and Fried. Dick, Esslingen, Germany, the quality of which goods is well known to the trade. The firm have made during the past year many improvements in their manufactured goods. In the spring balance, which they make to register as fine as one hundredth part of an ounce, or as heavy as 250 pounds, they have made many improvements. This has been in the way of adding different styles, and also making extra large dials which show the figures more plainly. The New Favorite Family Scales are now all made with sheet steel cases, instead of cast iron, reducing the weight about one-half and making them less liable to break. They are made with brass dials, silver-plated, or white dials and glass sash, well ornamented, and with all styles of scoops or marble plates. Another new article is the Chatillon's Even Balance Market Scale, which has been long enough on the market to receive the commendation of a large number of people who have used it. It is a most accurate and sensitive scale, the dial registering the weight instantaneously. There is also a new line of confectioners' scales, with the base finished in marble, granite or oak, the parts above the base, as well as the weights, being nickel-plated. The firm, as has already been stated, are sole agents for Foster Bros.' butcher knives, cleavers, steels, etc. These knives are made with the proper cutting edge, while the cleavers are made in great variety to suit all kinds of work. The cleavers are correct in shape, tempered to stand, made from best steel, apple-wood handles, and original in design. In the butcher tools manufactured by Friedrich Dick, the reputation of these goods is such as to need no special commendation. The firm also make and carry a large line of miscellaneous goods too numerous to mention in this space. All the goods, however, are of the best quality, the experience of a firm coming down from father to sons since 1835, having been such as to lead to an excellence in workmanship and material which could hardly be reached in any other way.

The Horton Mfg. Co., Fort Wayne, Ind., have issued a comprehensive catalogue, illustrating their complete line of Washing Machines and Corn Planters. It is a very neat specimen of typographical art, and the various articles which they present to the trade are illustrated in fine shape. In a note of introduction they direct the attention of their patrons to their increased line of standard goods, and refer especially to the Western Combination Washer, which they are now placing upon the market, and which they say "is by long odds the most perfect and satisfactory washing machine they produce, and is the result of years of experience and we are certain it will meet the requirements of the trade." They still further add that their "high standard of workmanship and greatly increased facilities" will enable them to continue to serve their customers to the best interests of the latter. They further add that their shipping facilities are unsurpassed; they keep a large stock of washers and planters always on hand, making prompt shipment possible; aim to have at least one person in every town handle their goods; guarantee their goods to do all that is claimed for them; and that their machines are all double jointed and strongly built, well finished and an ornament to the household. Glancing through this work we see illustrations of their Western Combination Washer, the Western Washer, American Washer, the Wayne Round Washer, the "Superb" Corn Planter, American Corn Planter, metal bottom Western Washing Machine; and conclude with their repair list for Western, American, Western Combination and Wayne Round Washers. They say that this catalogue will be promptly mailed upon request.

The Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York, have issued a very handsome catalogue of their Clipping Machines. It is printed in a very attractive manner, and upon the tinted cover are fac-similes of the gold

Digitized by Google

medals taken by this company at the World's Columbian Exposition, while on the back cover is a view of the interior of one of their work rooms. A view of the many illustrations contained in this work will show one not only the parts of the machine, but the methods of operation, the machines packed for carrying, and other matters of interest to those engaged in this line of labor, or to whose interest it may be to carry machines of this kind in stock. The pictures are in half-tone, and outside of its usefulness, the work is worthy of examination as one of art. In a note of introduction the company call attention to their marked departure from styles of the past and to the new features which they have introduced, among which is the use of steel combined with lightness. They state that their facilities are extensive for making goods in a superior manner, as they employ only expert mechanics who are accustomed to fine, interchangeable, exact work. They add: "Quality is our aim, and endeavor to surpass. Achievements in that direction have exceeded our most ardent anticipations. In point of equipment, it is conceded that the Gillette machine works have no superior in the world. Situated in the heart of the great metropolis of America, and in one of the grandest of New York's fireproof buildings, with every accessory and convenience conceivable, it is not to be wondered that, with the highest skill, something of an extraordinary degree of excellence is attained. All of the steel for plates is rolled and forged to a degree and tenacity of hardness that insures a cutting quality, a keenness of edge on the knife double that of any other process."

The Brown & Sharpe Mfg. Co., Providence, R. I., have issued a catalogue which illustrates and describes their Cutters. Full-page illustrations of these articles are given, among which are their involute gear cutters, side milling cutters, special formed cutters, formed cutters, metal slotting saws, milling cutters, cutters with inserted teeth, etc., etc. In a note descriptive of these goods they say: "Several of our stock cutters will be recognized, but most of the illustrations are selected to suggest our facilities for special work. There is no limit to the size of cutters or the number which may be combined in a gang, except the size, stiffness and power of the machines in which they are to be used. We now manufacture nineteen varieties and eight hundred and forty-nine sizes of stock cutters, and we can make any size or shape, or arrange for any combination of cutters that may be desired. The formed cutters can be sharpened by grinding without changing their outline. Stocks of our regular cutters are carried by the leading Hardware dealers throughout the country, and accordingly it is usually advantageous to purchase stock cutters from the dealers. It also is frequently advantageous to order special cutters through the dealers."

Sidney Shepard & Co., Buffalo, N. Y., with the branch house of C. Sidney Shepard & Co., Chicago, and proprietors of the Buffalo Stamping Works, have issued their Catalogue No. 58, illustrating and describing the extensive line of goods manufactured and sold by them. This is quite an important work, containing near 250 pages, bound in boards, and very copiously illustrated. Views of their various stores and factories are shown in full-page illustrations. A copious index follows. It will, of course, be impossible to attempt even a general enumeration of the various lines of goods handled by this house. The catalogue is certainly one that can be examined with great interest by the Hardware trade.

The Wire Goods Co., Worcester, Mass., have issued a little circular which should be in the hands of every manufacturer of bicycles. They call it "A Hint," and in it discuss the question of buying bicycle spokes and nipples, arguing in favor of the advantages to be gained from spokes and nipples threaded in the same place. The points they make seem to be well taken, and they will be pleased to send the circular to any party who is interested in this line of manufacture.

The David Maydole Hammer Co., Norwich, Chenango County, N. Y., have issued a handsome catalogue of the Maydole Hammers, a line of goods which it is hardly necessary to introduce to the Hardware trade. They declare that these goods are manufactured from solid crucible cast steel, and that a large number of new styles are shown. The illustrations are given in two colors, one for the hammers and one for the handles, and the work viewed typographically may be pronounced a perfect specimen of fine catalogue making. Upon different pages throughout this catalogue are given some of the awards made to the Maydole Hammers, in the different expositions of the world.

The Onondaga Specialty Co., Syracuse, N. Y., have issued their Catalogue No. 5, covering their extensive line of steel and wood wheelbarrows, track and road scrapers, two and four wheel trucks, push carts, wheels, skids, etc. This handsome little work is very thoroughly illustrated in colors. It contains over one hundred pages, with a copious index, and presents a very extensive and attractive line of articles in the direction mentioned.

The Energy Mfg. Co., Nos. 1115–1123 South Fifteenth Street, Philadelphia, Pa., have issued a new catalogue of their Self-Retaining Elevators, Dumb-Waiters and Hoists. These well-known elevators with their attachments, etc., are shown upon every page, and anyone desiring knowledge upon this important point, will do well to send for this catalogue, which the company will gladly furnish.

The Grey Iron Casting Co., Mt. Joy, Pa., have issued an illustrated catalogue and price list of their Hardware, iron novelties and house-furnishing specialties. They call attention to their new detachable handle sad-iron which they pronounce "a fine toy and a big seller." The catalogue will be furnished to anyone upon application.

Meeting of Bolt Men.

A meeting of the nut and bolt manufacturers of the United States was held in the Weddell House, Cleveland, Ohio, October 16th. The manufacturers present included T. M. Moore, Philadelphia; J. R. Brunt, Anderson, Ind.; S. J. Shimer, Milton, N. Y.; Seward Heidelbach and Isaac Joseph, Cincinnati; George O. Cromwell, Muncie, Ind.; E. H. Fowler, Anderson, Ind.; E. T. Gilbert, Detroit; C. R. Wise, Rockford, Ill.; Charles R. Wilcox, Baltimore; James M. Hibbs, Philadelphia; J. H. Sternberg, Reading, Pa., and W. S. Comley, Port Chester, N. Y. There was no definite action taken at the meeting, on account of the absence of two or three of the largest manufacturers, but it was agreed that the prices at the moment were such as to make it difficult to obtain the prime cost of the goods. The meeting adjourned subject to a further call, when it is thought that those absent would meet the rest and decide upon a definite action. There are twenty-six nut and bolt manufacturers in the country, representing approximately a capital of eight millions of dollars.

Gen. A. W. Greeley, chief signal officer of the War Department, until November 15th is inviting proposals for manufacturers of, and dealers in bicycles, for furnishing the signal service six safety bicycles, solid tire, for use of sergeants of the signal corps, in repairing military telegraph lines, with first-class lamp, bell and saddle bag, containing wrench, oil can, screwdriver, and, if necessary, spoke wrench; singly and strongly crated for shipment; one side to be attached by screws, so as to be easily removed and replaced. Solidity and simplicity of construction, and facility of repair in the field, are deemed of the greatest importance for rough field work.

A useful article for placing an egg in a saucepan or taking it out, called the "Grip" egg tongs, is being brought out in England. It consists of two parallel grips attached to a wire holder which can be grasped by the fingers, and thus the egg can be safely handled without burning the hand.

The sleigh-bell has appeared in the stock of the jobber, and already good sales are reported. The best market for this class of goods is in Northern New York State, and above that latitude, all over the country. There are few manufacturers of sleigh-bells in the country.

Substituting Cheap Hardware.

"The substitution of cheap Hardware for good in the filling of the specifications of architects by contractors is becoming an evil, and in some respects it is demoralizing." So said a prominent manufacturer to a HARDWARE reporter, some days ago.

"The architect, in making up his specifications, will often call for a superior class of material and finish," he continued, "and the contractor fixes his price upon that basis. But as time rolls on, when the Hardware begins to be needed, the contractor begins to try to save a penny, and this impulse grows upon him until he finds himself placing in a reckless manner the cheapest goods to be found in the market in the building that he is constructing. If called to account for this, he evades the issue, and if driven further, he offers a compromise, which, however, is generally smaller than the amount he has saved by his sharp dealing. For instance, a contractor managed by placing inferior articles into his work, to save, it was afterward computed, seven hundred dollars. Upon fault being found, he offered to take off three hundred dollars, thus finally saving four hundred dollars, a snug little sum in the small transaction that was in hand. In another case the specifications called for double cylinder locks, and the contractor deliberately placed in single cylinders, saying that the latter were just as good.

"Not only does this evil embrace architects' specifications, but it extends to contracts given by the government departments, and sometimes with greater boldness. A remedy has been suggested for this, and that is that the architect buy personally the Hardware that is called for. He does that in many other things already, such as decorations, fire-places, and so on. Nice looking Hardware adds much to the appearance of any building, and there is a growing need that more than usual care should be taken in this direction."

Bicycles in the Hardware Trade.

INCORPORATIONS, NEW FIRMS, AND WHEELS ADDED BY THOSE ALREADY EXISTING.

Albert Lea, Minn.—C. P. Kiel & Co. will open a new Hardware store and take up bicycles. Correspondence invited with manufacturers of bicycles and bicycle sundries, looking to accepting agency.

Fargo, N. D.—Katz Bros. are opening a new Hardware store and will put in a line of sporting goods, bicycles and sundries. Circulars from manufacturers and jobbers of these lines invited.

Portland, Me.—The Pneumatic Cellular Tire Co., incorporated to manufacture and deal in pneumatic tires of all kinds. Capital stock $500,000.

Harrisburgh, Pa.—Fred G. Mason, No. 321 Market Street, invites correspondence of manufacturers of bicycles and bicycle sundries, looking to accepting agency.

Holyoke, Mass.—The Keating Wheel Co. will double force of operatives in bicycle factory.

Louisville, Ky.—E. B. Dye and Co., Main Street, will commence handling bicycles. Correspondence invited with manufacturers of bicycles and bicycle sundries.

Louisville, Ky.—The Standard Cycle Co., reported gone out of the business, the Dow Wire Works purchasing the stock and the fixtures. It is rumored that a new bicycle manufacturing company will be organized.

Toledo, Ohio.—Toledo Bicycle Works have placed contract with Lodge & Davis Machine Tool Co., Cincinnati, Ohio, for bicycle manufacturing equipment.

Washington, D. C.—H. E. P. Baden has opened new bicycle store at No. 427 11th Street, N. W., recently occupied by Darlow & Sons. The Potomac Bicycle will be manufactured and sundries and bicycle sundries and bicycle parts will be dealt in.

Clearmont, Mo.—Cullom & Wolfe, Hardware, bicycles, etc., succeeded by Wolfe & Houston.

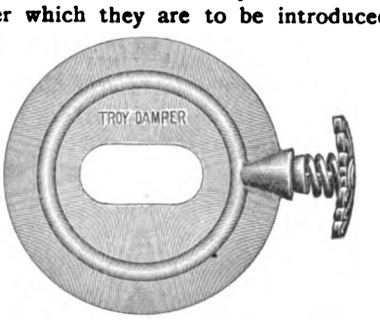
Jackson, Mich.—The Derby Cycle Co.'s factory for manufacturing bicycles with prison labor, is about ready to commence operations. The machinery is all in position and nineteen convicts have commenced work. The contract the Derby Cycle Co. has with the prisoners calls for seventy-five convicts.

Rochester, N. Y.—Sager Mfg. Co., incorporated by J. H. Sager, George C. Sager and Frederick Zoller of Rochester, to manufacture and sell bicycle saddles and other bicycle attachments. Capital stock $25,000.

Denver, Col.—The Deitz Cycle Co. filed copy of corporate seal.

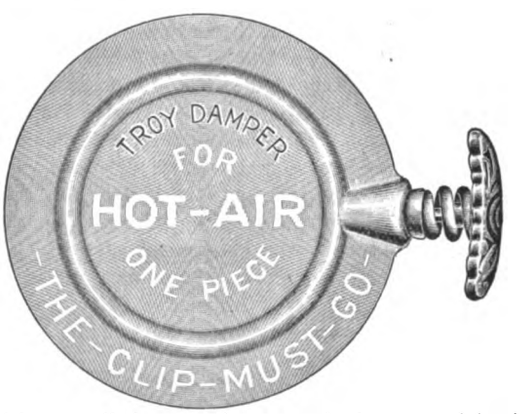
Toledo, Ohio.—The Truman Bicycle factory is preparing to occupy a factory building on Smead Avenue.

Atlanta, Ga.—The Indiana Bicycle Co. will establish a branch house corner of Peachtree and Walton Streets.



Detroit, Mich.—Reindel & Sprung, bicycles, guns, etc., reported dissolved. John M. Reindel succeeds.

Plymouth, Ind.—The Marble Cycle Mfg. Co.'s large three-story brick factory building was struck by lightning during a recent terrific storm, damaging the valuable machinery.



Weatherly, Pa.—The Keystone Bicycle Co. are having plans drawn for a large factory.

The Troy Dampers.

The Troy Nickel Works, Troy, N. Y., have once more demonstrated their enterprise by the addition to their line of the Hot Air Dampers here shown. "The Clip Must Go" is the motto, it seems, under which they are to be introduced. It is ex-

plained that the Damper is made of steel, and in such a way that it cannot warp or get out of position. To place it in position requires but one hole in the pipe and a moment of time upon the part of even the most unskillful. "It is light and durable; the spring in the handle is strong, and will keep in

any position at all times, and can only be moved by hand." The handle is nickel-plated; is made in all sizes; patent has been applied for; and the six inch size is now ready. The Troy Nickel Works will send prices, etc., upon application.

At the annual meeting of the Central Oil Gas Stove Co., which was held at Porland, Me., some days since, these officers were elected: President, John C. Hammond, Northampton; first vice-president, E. A. Thissell, Northampton; second vice-president, C. W. Conant, Gardner; treasurer, W. H. Wilder, Northampton; these officers, with Caloin H. Hill, Chicago; Dwight S. Smith, Jackson, Mich.; L. H. Littlefield, Pawtucket, R. I.; Harlan P. Wilder, Gardner, and Henry P. Field, Northampton, constitute the board of directors.

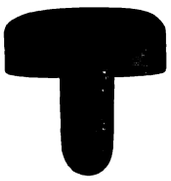
C. M. Avery has been appointed the direct representative of the Horton Mfg. Co., Fort Wayne, Ind. They are the well-known manufacturers of corn planters and washing machines, their new Western Combination Washer being one of the events of the season.

The bicycle dealers and agents of Louisville, Ky., representing twenty exclusive bicycle houses, and six other merchants who handle wheels as a side line, are agitating the question of a local trade organization.

Digitized by Google

New Goods in the Market.

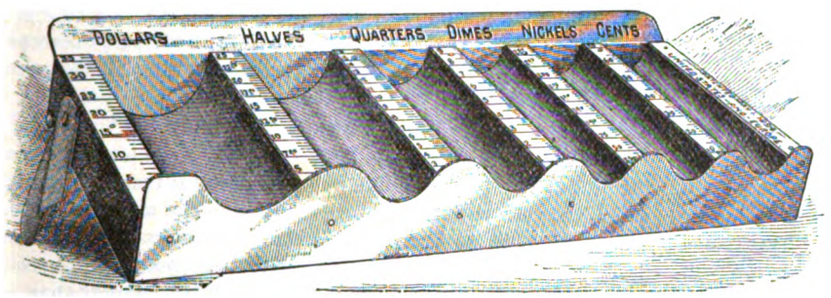
If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.



"Common Sense" Chair-tip.

The "Common Sense" Chair-tip is manufactured by Henry F. Knowles, No. 49 Federal Street, Boston, Mass. It consists of a rubber tip molded and vulcanized upon a wooden spindle. The head of the spindle is first covered with frictioned duck, and about that is wrapped the rubber, which is vulcanized to both duck and wood. The spindle can be inserted in the bottom of any chair leg, and, of course, all noise, scratching upon the floor, etc., are done away with.

Universal Cash Register.

This new Universal Cash Register is being placed upon the market by Samuel Chittick, No. 130 East Twenty-third Street, New York City. The body is of wood, well finished; is near 4x9½ inches in size, with nickel-plated metallic top and bottom strips; supplied with adjustable legs of different lengths on the

ends, to allow of standing in an inclined position. "It is divided into compartments of suitable sizes to accommodate dollars, half dollars, quarters, dimes, nickels and cents, with a marked plate at the left of each compartment to show the amount of coin in the register at any time; the capacity of each compartment being shown in the cut." The manufacturer adds that "the register is useful, simple, convenient, compact and ornamental; combines two articles in one, a coin register and a coin holder; is a great time and labor saver, avoiding mistakes; when the cash is in place it is counted and registered instantaneously, a glance showing the amount; acts as a check on those left in charge of the cash while the proprietor is absent; the registering plates are arranged to count new and worn coin as commercially received and paid out; is so adjusted that it can be used in an ordinary cash drawer or placed on a desk, and that when wrapping coins they are already arranged to pick out and wrap up." The maker delivers it to any point in the United States, charges prepaid, for $1.

Cleveland Novelty Tool Bags.

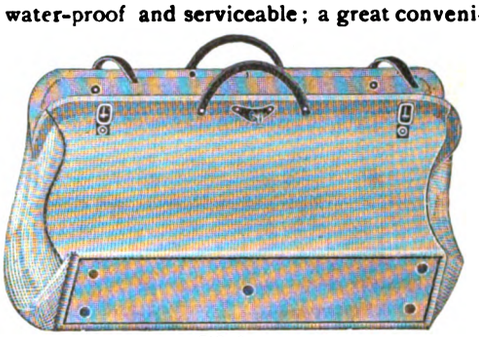
The Cleveland Novelty Co., Cleveland, Ohio, are placing upon the market a line of tool bags, baskets and satchels, some

FIG. 1.

forms of which we here show. The Basket, Fig. 1, is formed of heavy water-proof duck, leather bound; has a double bottom and metal buttons; especially designed for mechanics whose tools are bulky and not easily carried or packed in a chest. Fig. 2, the Bag, is made of the same material, with

FIG. 2.

double bottom and two pockets; is adapted to the use of carpenters, masons, plasterers, who are compelled to carry their tools from place to place. Fig. 3 shows the Satchel, which is made of heavy canvas, with leather seams, leather handles, metal buttons to protect the bottom, and is provided with lock and key; all are water-proof and serviceable; a great convenience to masons, plumbers and kindred tradesmen. The baskets are made in 30 and 36 inch sizes, the bags in 22, 24 and 26 inch sizes, and the satchels in 16, 18, 20, 22 and 24 inch sizes



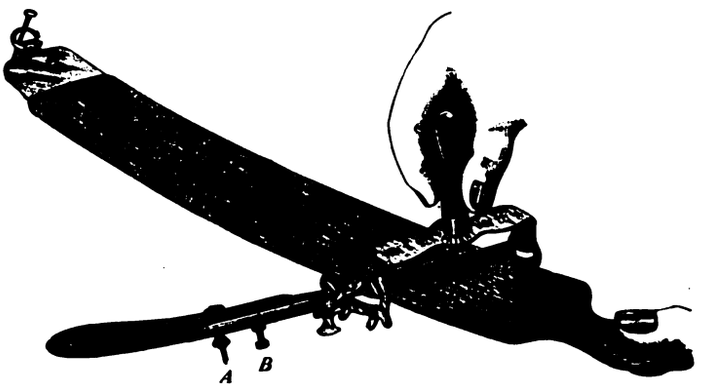


FIG 3

Service Stropping Machine.

E. Lothar Schmitz, No. 92 Reade Street, New York, is manufacturing the Service Stropping Machine here shown. It is explained that all parts of this article are nickel-plated, with a black enameled handle and a substantial cross bar. "A nickeled metallic attachment, with brass set screws (A and B) is used to keep the handle and blade of the razor in a straight line; and in adjusting the attachment to the back of the shank and handle the hook of the screw A is passed through the handle and turned, then fastened in place by screwing the

knurled nut. After this the screw B is turned until the handle and blade are tightened in a straight line. The screw B, when once properly adjusted to a razor, needs no further resetting. The razor blade is then slid in the frame holder and one end of the swing strop is passed through the opening between the revolving slider and the cross bar; strop is held in a horizontal position and by moving the machine forward and back over the strop the friction causes the blade to be reversed each time, automatically turning it on its back with the cutting edge pressed against the strop. The strokes may be short or long,

quick or slow, as desired, and in every case the machine will work to perfection, giving the blade a fine keen edge, such as never can be produced in the ordinary way of stropping. The strop will not be spoiled, as it is quite impossible to cut into the leather. The machine is sold with the strop."

"L. & G." Garbage Pail.

The Lalance & Grosjean Mfg. Co., No. 19 Cliff Street, New York, are offering this new Garbage Pail to the trade. It is made of wood outside, with a crystal steel enameled lining. It has an outside measurement of 12¼ x 12¼ inches, holds three gallons, and is commended by its makers for its durability, tightness, lightness and imperviousness. It can be easily kept clean, because of its enameled lining.

Trimo Giant Pipe Wrench.

This Pipe Wrench is manufactured by the Trimont Mfg. Co., Roxbury, Mass. The makers speak of its strength, safety and durability, and add: "This Wrench has a solid forged head with detachable interchangeable gripping jaws made from a fine quantity of tool steel. The chain used is the best quality of cable chain. The head is made so that the chain is held

securely without danger of falling out, thus overcoming one of the most dangerous and unpleasant features attending the use of chain wrenches, and still can be readily released at the will of the operator. This Wrench is made and adapted for all kinds of work as well as hard and rough usage. No slipping; no locking; no lost motion. We will make the handle of Nos. 5, 6 and 7 length to order with or without ring at an extra cost."

The Handy Wagon.

This attractive little article, of especial value for the holiday season, is being placed upon the market by the Handy Wagon Co., Canton, Ohio. It combines, they say, "all the features of the plain child's wagon and a velocipede, and costs less than either when considered with reference to the child's safety in using, and the strength and durability of the vehicle. It is made of the best steel and malleable iron, and is guaranteed to carry 300 pounds with perfect security. The axles are of steel, and every spindle is milled, and each wheel reamed, so as to afford a neat fitting and easy running bearing.

To the rear crank axle is attached a pair of pedals, which, in addition to its being the best made wagon on the market, makes it the safest, lightest running, and most easily controlled velocipede ever constructed. The pedals are detachable, and, by adjusting the seat in the bottom of the wagon, can be suited in reach to the convenience of children from three to twelve years of age. Every wagon from our factory is guaranteed to be made of first-class material, and constructed after the most mechanical and approved methods."

Safety Collar and Holder.

The Safety Stovepipe Collar and Holder is being placed upon the market by J. K. Randles, Quincy, Ill. It is designed to prevent the stovepipe from slipping out of the flue hole, or from sliding too far in, and thus shutting off the draught. It is declared to be "soot and spark proof: can be firmly fastened in the flue hole, and clamps tightly around the pipe." The maker, in further description, adds: "A close inspection of the cut will render unnecessary an extended description. To put the collar in place, the thumb-nuts are loosed until the slotted claw hooks will slide back and forth readily, the collar is then put in the flue hole, with hooks inside; press the collar firmly against the wall, at the same time pull on the slotted hook, and when tight as can be made, turn the thumb-nut to hold. The pipe is then inserted in the collar, and the stove bolt at top is turned with a screwdriver, until the collar firmly clamps around the pipe. The hooks inside the flue and behind the bricks holds the collar in place against the wall, and the collar clamping around it surely holds the pipe. It is neat in appearance and durable, there being no springs or solder about it, and is nicely bronzed. It is easily put in place. No tools are required except a screwdriver. It does not mar or disfigure the walls and is an ornament to any room."

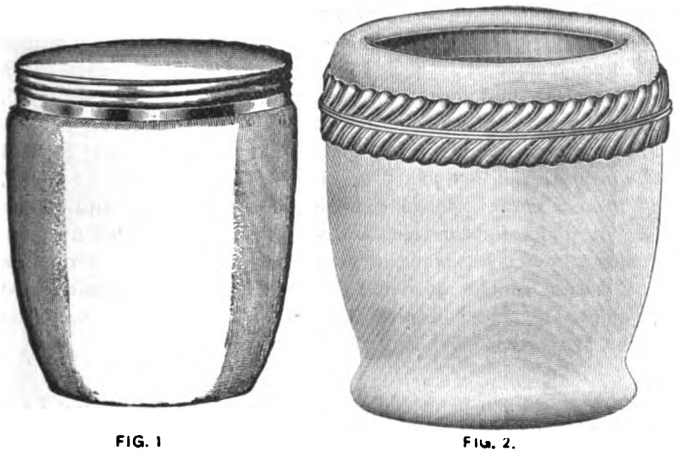
Brighton Pound Coffee Mill.

The Logan & Strobridge Iron Co., New Brighton, Pa., have just added to their large line of coffee mills a One Pound Mill which bids fair to take a leading place in the market. "One great objection to a canister coffee mill is its bulk and unwieldiness, but that has been entirely overcome in this mill. For compactness it has no equal, being but little larger than an ordinary coffee mill. It is made in the best manner possible, having rapid grinders, adjustable to fine or coarse. The adjusting nut has a very simple but effective locking device which prevents the nut from turning after once being set. The boxes are made of the best poplar, dove-tailed and glued together. The mill is being put on the market at a low price which is bound to make it a good seller."

Digitized by Google

Patent Premier Egg Cups.

The artistic and attractive novelty here illustrated is being placed upon the market by the Meriden Britannia Co., Meriden, Conn., and Nos. 208 Fifth Avenue and 1128 Broadway,



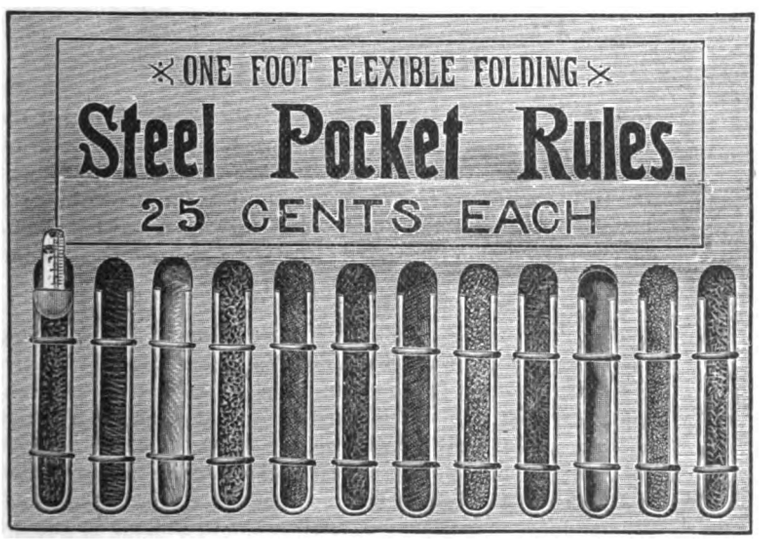


FIG. 1 FIG. 2.

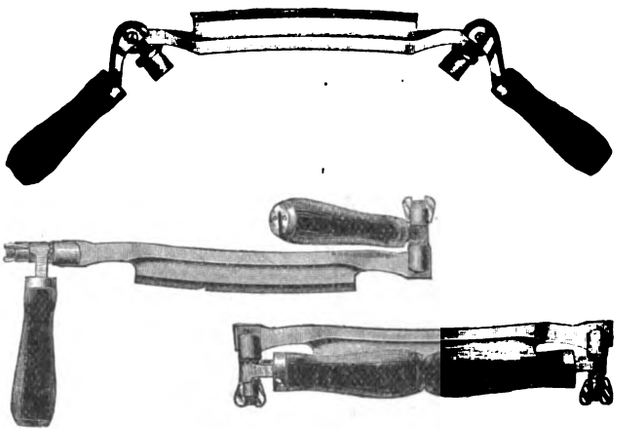
New York. It is the patent Premier Egg Cup, which is quadruple silver-plated, has china linings, and is desoribed as "a perfect article for cooking and serving eggs. No shells, perfect flavor, elegant in appearance." Its method of use is to "break the eggs into the china cup, screw the cover on tightly; entirely submerge in the water and boil as usual one or two minutes longer than for eggs in the shell. The flavor is improved by placing the condiments with the eggs before boiling. Capacity two eggs. When ready to serve, remove the covers from the china cup (Fig. 1) and place in the silver frame" (Fig. 2.) Prices, etc., will be sent upon application.

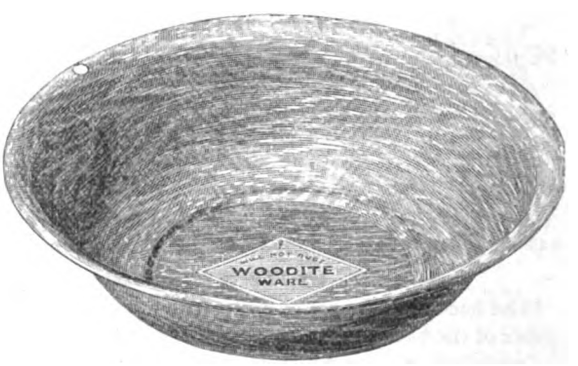
Lufkin Steel Rule Card.



An attractive and unique article just placed upon the market is the Rule Card offered by the Lufkin Rule Co., Saginaw, Mich. Its character and purpose will be seen in a glance at the accompanying illustration. It is a neat display card, made to set on the counter and show-case, each containing one dozen one foot flexible steel folding pocket rules. These Rules are made of spring steel No. 28 gauge, four inch joints three-fold, put up in handsome metal bound embossed leather cases of assorted colors. They are light, compact, convenient, durable, and just the thing to carry in vest pocket and are ready sellers. The price per card, with one dozen rules, is $2 net; retail price of Rule, twenty-five cents each. The character of the company making these is a guarantee that the goods are in all de-

grees first-class, and just as represented. They will be glad to hear from the trade,and will fill sample orders for one card, by mail, for twelve cents.

Cantelo Drawing Knife.



C. E. Jennings & Co., No. 79 Reade Street, New York, are placing upon the market the new style Cantelo Drawing Knife, which is an improvement over the old style Cantelo Knife, known as "Wilkinson Drawing Knife." The handle can be quickly adjusted to almost any position by loosening the thumb screws at either end of the blade, thus allowing the mechanic to make use of the tool in almost any position. When the tool is not in use, the handles fold over the blade, thus fully protecting the latter when it is thrown about in the chest of the

carpenter. The arrangement of the knife with automatic locks makes of the tool one that is very stiff handled.

A Sample of "Woodite."

A new enamel ware, "Woodite," has just been placed upon the market by the Bronson Supply Co., of New York and Cleveland. It takes its name from its similarity to the color and grain of wood. It is a mineral enamel, not a lacquer or a japan, although it resembles the latter. The process consists of several coats, yet the enamel is very thin. "It is extremely tough and does not crack or chip, and it cannot rust. It is not intended to withstand heat. Woodite will be made in a large variety of articles and utensils for kitchen and household use. The process has been tested and experimented with for over a year and a half, and has now been brought to perfection, and will be quite a novelty in the Hardware and house-furnishing trade. The Bronson Supply Co. have only within the last few days placed these goods on the market. They are making basins only at present in Woodite ware. The basins are of the best IX tin, mineral enameled. The success of Woodite is assured, a part of the trade to whom the goods have been shown having already placed large orders for basins. The manufacturers have made up a large number of articles in this ware, but these will not be manufactured in quantities for some weeks yet. The inventor and manufacturer of these goods is F. W. Morse, of Providence, R. I., who has contracted with the Bronson Supply Co. to sell the entire output of Woodite ware in this country and abroad. In appearance, Woodite is entirely different from anything ever before put on the market. Its resemblance to wood is perfect, showing the grain of the wood minutely. It can be made in a large variety of colors, resembling various kinds of wood. It keeps its lustre

and will not wear off. One remarkable feature of this ware, and a very valuable one, is its elasticity. In fact, Woodite utensils may have a number of indentations and plenty of hard usage, but the enamel will not crack or chip." The traveling salesmen of the Bronson Supply Co. are now showing this ware all over the country, and samples are also sent on request from the main office of the company in Beekman Street, New York. Further particulars will be furnished by addressing the manufacturers.

Digitized by Google

A New Wrought Padlock.

A padlock presenting several points of novelty has been placed upon the market by the Yale & Towne Mfg. Co., Stamford, Conn., and is shown in the illustration, the cut being just one-half the actual size of the lock. This Padlock is made entirely of wrought metal, the shell being either of brass or Bower-Barffed steel, while the shackle and all the working parts are of brass, both for the brass and for the steel shell

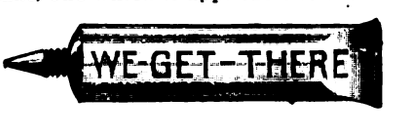
locks. The novel form of case and the peculiar construction of the shackle will be noticed at once, the shell being rectangular in shape, one inch wide by one and seven-eighths long, and the shackle forming a circular ring with the joint at the top. The shackle has spring action, opening automatically when the key is turned, and being self-locking when closed. The position of the joint makes this form of shackle very convenient, the opening being in the side, rendering the lock easy of removal from the staple when unlocked, and also enabling it to be locked readily by pressing the two sides of the ring together. The internal mechanism is entirely of brass, operated by flat steel keys, the locks being 24-keyed and all different in a dozen. The steel shell locks are made with brass shackles, thus avoiding the possibility of rusting, and the workmanship and finish are most excellent. This padlock is intended to meet the requirements of the market for a thoroughly well made wrought padlock, which, while possessing a high degree of security and convenience, can also be offered at a moderate price.

Illustrated Bicycle Novelties.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

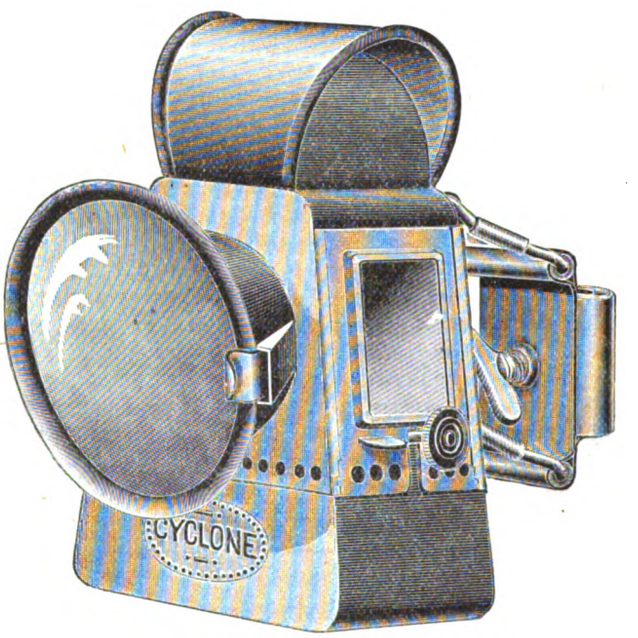
When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.



The Rover Carrier.

The Rover Carrier is being placed upon the market by the Unique Mfg. Co., Columbus, Ohio. The illustration herewith given shows the Carrier in use upon the wheel. The makers describe it as well made in every respect, and add: "It is noiseless, dust proof and water proof. There is no metal used in its construction of any kind excepting the buckles on the straps and the eyelet fasteners. It is made wholly of waterproof material and when in use is folded in such a manner as to make it absolutely impossible for dust or water to penetrate and soil the articles you may have within. Is peculiarly adapted to tourists or riders who are in the habit of making short excursions in the country."

"We Get There" Lubricant.



"The success of bicycling as to speed and comfort," says the maker of the above article, "depends in a large measure on a perfect lubricant, one which is applicable to the inside bearings

as well as the chain. The success the past season of 'We Get There' Lubricant is attributed to the fact that it has proved all that is claimed for it. It is the only lubricant which is manufactured expressly for inside bearings and chain, and being free rfom oil, does not gum up or run out, insuring a clean wheel under all conditions of weather. It is not affected by water. It is put up in collapsible tubes, with cone top and screw cap, making a very neat and attractive package which is original with the proprietor and manufacturer, insuring cleanliness in handling, and doing away with the oilers. It prevents a bearing heating, and quickly cools one that has heated. Thomas W. Eck, trainer of John S. Johnson and other fast riders, gives it his unqualified approval, claiming it is the best he ever used. Having used it all this season, the phenomenal riding of Mr. Johnson who has just made a straightaway mile in 1.35 2-5 and the circuit mile in 1.50 3-5, verifies all his trainer claims for it. It is also manufactured expressly for machinery and heavy bearings, also for carriages and wagons; a buggy with an odometer attached has traveled over four hundred miles on one application of the lubricant." For further information and prices to the trade address the proprietor and sole manufacturer, J. Hurd Brown, Box 2002, Boston, Mass.

"Cyclone" Bicycle Lamp.

The Steam Gauge & Lantern Co., Syracuse, N. Y., and Chicago, Ill., are placing upon the market the handsome "Cyclone" Bicycle Lamp here shown. The chief points made in its favor are that it is light, strong and convenient. It is made of first-class materials; five inches high; weighs but eleven ounces; is finished in best black japan; the reservoir is easily removed; the lens is double convex, highly polished; and the spring "so adjusted that the light will not jar on the roughest

road." It is further explained that "the holder frame of the red light on the side of the lamp slips down and locks the oil holder in place; there are no other catches or springs about the lamp except the one to fasten the lens in place when the lamp is opened for lighting." Hardware dealers who handle bicycles can obtain illustrated circular by writing to the company.

Hon. Webster R. Walkley, by invitation of the surviving members of the First New York Volunteer Engineers, delivered the oration at the fourteenth annual reunion, on the evening of October 17th. It is needless to say that Mr. Walkley spoke words of patriotic wisdom, and spoke them well; so well, in fact, that Edward W. Serrell, major-general of the United States Army, who was in command of the Engineers, and presiding officer at the reunion, felt moved to address to the orator an autographic letter, in which he said: "I have frequently, since your address, thought of it, and used as I am to such orations, I must say that it was one of the finest I have heard in a long time."

Bevin Bros. Mfg. Co., East Hampton, Conn., for whom John H. Graham & Co., No. 113 Chambers Street, New York, are general agents, have issued their price list for sleigh bells for the season of 1894-5. The list includes body straps, sheet metal bells, globe sleigh bells, shaft and saddle chimes.

American Screw Co.'s New List.

The American Screw Co., Providence, R. I., have issued, under date of November 1, 1894, a new list of discounts for their Patent Gimlet Pointed Wood Screws, Machine Screws, Bolts, Rivets and miscellaneous goods; also a new price list of rivets and burrs, all of which is herewith published:

The "Saugatuck" Snow Shovel.

Underhill, Clinch & Co., New York, are selling a new Snow Shovel for which they are agents. It is called the "Saugatuck" and "while it embraces all the good points of similar styles it has some advantages. Instead of having a malleable iron tip it has a heavy steel tip. A strip of sheet steel across the back not only strengthens it but prevents the wood from wearing quickly. The handle is bolted by two bolts to the blade." They claim it to be "the best made and strongest shovel on the market."

Mr. Daly Returns.

Charles Daly, of Schoverling, Daly & Gales, New York, arrived home after a brief trip in Europe on the steamer *Paris*, November 3rd. While abroad he visited all the principal cities of England, France, Belgium and other countries. Speaking particularly of the gun trade, Mr. Daly said it had been dull, and was yet so, but it was slowly picking up and getting better. Some good orders had been received from Australia and there was some trade with America. Wages are very low, the workman eating his bread without butter figuratively, but as prices of goods were advancing, it is thought that some improvement in this direction would soon be reached. The gun trade in France has improved by reason of the new tariff which has been imposed by that country against Germany and Belgium. Mr. Daly was absent about six weeks, and is much pleased with his trip in the way of the information which it has given him.

E. Bissell, Son & Co., No. 12 Murray Street and No. 15 Park Place, New York, announce upon page 43 of this issue, a large, special and unreserved trade sale of cutlery on Tuesday and Wednesday, November 13th and 14th, comprising articles of especial value for Thanksgivings and the holiday trade; and in addition a choice line of fine quadruple silver ware; two thousand pair of Winslow's American club skates, etc., etc. All the details will be found upon the page referred to.

W. C. Heller & Co., manufacturers of the Heller Mail Boxes and Grip Wire Stretcher, Montclair, N. J., report that business is picking up very materially, and that they are looking for a large trade during the coming season,

Bicycles For 1895.

WHAT THE MAKERS SAY AS TO OUTPUT, IMPROVEMENTS AND PRICES.

A VARIETY OF ANNOUNCEMENTS, OPINIONS AND CHANGES.—INFORMATION OF VALUE TO THE HARDWARE TRADE.

In order that the Hardwaremen of the country may learn as early as possible in regard to the output, prices, etc., of the bicycle manufacturers for 1895, HARDWARE has opened correspondence with the leading concerns of the country, some of whom announce that they are not yet ready to furnish the information desired. We take pleasure, however, in herewith submitting considerable information of value upon a subject which certainly must be of interest to the Hardware trade.

POPE MFG. CO. AND PRICES.

The Pope Mfg. Co., Boston, Hartford, New York and Chicago, have named the following scale of prices for their bicycles for 1895: Columbias, $100; Hartfords, $80; Men's Wizard, $60; Boys' Wizard, $50. With the Columbias an option will be given to the purchaser of the Dunlop tire, if he prefer. It is understood that in this reduction the company will allow of no deterioration in the quality of their goods, the new prices being because improvements in the manufacture allow of greater economy in the cost of production. The Pope Co. are at present moving their offices from Boston to Hartford, Conn.

YOST MFG. CO. ON HARDWAREMEN AND WHEELS.

Yost Mfg. Co., Toledo, Ohio. In answer to an inquiry from HARDWARE as to their plans for the coming year, this company say: "We are particularly desirous of securing the Hardware trade, and we believe that it is the natural channel for wheels. The majority of our customers are Hardwaremen, and in every instance we believe that the account is satisfactory, both to them and ourselves. From our knowledge of the Hardware trade we believe there is no specialty which they are, or can handle, that is affording them as great profits as the bicycle department. The only thing that surprises us is that there are a number of the representative dealers who have not given the bicycle business their consideration, and have not placed themselves in position to supply the large popular demands that have been created in bicycles."

THE WINTON CO.

Winton Bicycle Co., Cleveland, Ohio.: "Our line for 1895 will comprise seven new models to be known as Nos. 8, 9, 10, 11, 12, 14 and 15. Frames will be made in five different heights, with two lengths of heads. Our new racers will be the most rigid wheels of their class, and will weigh 16 and 17 pounds, according to the height of frame and weights of tires. The new light roadsters will weigh 20 and 21 pounds, with full roadsters at 24 and 25 pounds. Our Ladies' Wheel (No. 15) is an entirely new wheel, very attractive in appearance and weighing all on, 23 pounds. By a new method of attaching the cranks and sprocket wheel, we are enabled to bring the tread down to 5¼ inches on all of the new models, without narrowing the crank bearings. This new way of attaching the cranks is stronger and more durable, besides being much easier to attach or detach. By tapering the bottom braces and the diagonal brace through the frame, the strength of the frame is materially increased, as is also the general beauty of the 'Winton' lines. No expense has been spared to bring our '95 models up to the very highest standard of excellence."

PRICES FROM ROCHESTER.

Rochester Cycle Mfg. Co., Rochester, N. Y.: "We beg to acknowledge receipt of your valued letter of the 2d inst. In reply to your request for our views on the subject of next season's prices, it has not been customary with our company to come to any hurried conclusions upon so important a subject as this, but it is no doubt of special interest for this season that prices should become known as early as possible, in order that the trade may adjust itself to any changes that may occur. Appreciating the fact that your paper is taking an active interest in the subject of Bicycles, we write you as promptly as possible as soon as making up our minds upon the subject. To begin with, there has been and is a growing demand for a substantial first-class modern light Bicycle, at a price that comes within the reach of the average man's pocketbook—we mean the multitude of riders who want something in a modern up-to-date light wheel at a very moderate cost. There have been a number of these machines in previous years upon the market, which were listed at the highest grade price, which have came unfairly in competition with more expensive wheels, which were in reality better value from the fact that they were standard high grade goods. We shall bring out a wheel weighing 25 pounds which will be first-class and warranted, to meet this trade, and place the list at $75 each. In addition to this machine we shall place upon the market the regular highest grade Rochester which will contain all the attributes of excellency that it is possible to combine with improvements up to the present day. This wheel will weigh about 22 pounds, and list at $100. In addition we shall make a special Rochester Track Racer, which will be made extra light, and list at $125. We feel that in placing our prices at these popular rates, and adhering to our established reputation in quality, that the large number of increased sales, and the natural reduction in the cost of our materials, will protect us against loss in profits. In placing the vehicle in reach of the multitude, it will largely tend to increase the popularity of bicycling everywhere."

A RUBBER CUSHIONED WHEEL.

A. McIntosh Williamson, No. 2204 Fitzwater Street, Philadelphia, Pa., has issued a neat little book illustrating and describing Williamson's Rubber Cushioned Wheel, which he refers to as possessing originality, practicability, efficiency and utility. In describing it in detail, he adds: "It is a wheel which is constructed on scientific principles, being cushioned on the spokes and in the rims with Para rubber, as pure as it can be used, instead of an outside tire, thus giving same freedom from jar and concussion, and having a number of other prominent features to recommend it, at a much less cost, and with a greater length of life to the wheel."

WILL STILL DISTRIBUTE.

A. W. Gump & Co., Dayton, Ohio: "Replying to your letter of November 2d, would say that we shall still continue exclusive distributing agents of Crescent Bicycles in Ohio, Kentucky, Tennessee and West Virginia, as heretofore. Besides the above, we will also continue to buy up entire stocks of manufacturers, which we sell all over the United States."

CONCERNING HICKORY WHEELS.

Hickory Wheel Co., South Framingham, Mass.: "Answering yours, would say that we are not in a position to say anything concerning the plans of this company for next year, beyond the fact that probably we will not manufacture Hickory bicycles."

AGAINST REDUCED PRICES.

The Queen City City Cycle Co., Buffalo, N. Y., state that it is their firm conviction that the list price of bicycles cannot be further reduced without a reduction in quality. They say: "It is very true that there are many qualities of bicycles placed upon the market at the present time at the same list price, but this is true in every business. What we refer to is the standard high grade bicycle; we are therefore not in favor of any further reduction. We prefer to keep our quality thoroughly up to our high grade standard, and know that we cannot do this in justice to ourselves, our jobbers and our retail dealers without reducing quality."

The Phillips Wheel Co., Rochester, N. Y., state that as manufacturers of a high grade of bicycles, they shall endeavor to keep their prices up to the present standard. They explain this position by the statement that: "A cut in prices means putting high grade machines in competition with the many poor wheels which now flood the market. Many people cannot tell the difference between a high and a low grade machine. The latter can be nickeled and enameled to look very fine indeed."

The Williamsport Bicycle & Mfg. Co., Williamsport, Pa., say that their prices will remain the same no matter what cuts may be made in other directions. They add: "We turn out a strictly high grade wheel at a list price of $85 for a plain wheel, a highly finished complete wheel with all accessories at a list price of $100."

Digitized by Google

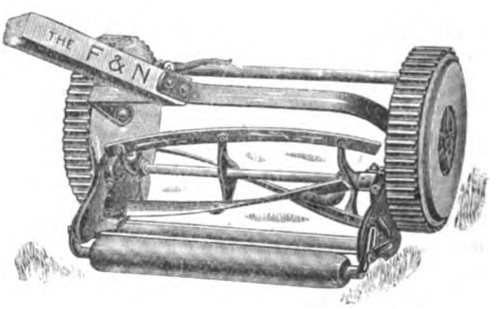
GRAND RAPIDS CYCLE CO. ANNOUNCEMENT.

Grand Rapids Cycle Co, Grand Rapids, M ch.: "It has been the policy of this company to sell our goods at net prices, which would warrant a reasonable profit, and allow our dealers the same freedom and liberty in conducting their business that we ourselves enjoy. We manufacture as good a wheel as we can make, without any fancy expenditures in the way of patents and costly experiments, confining ourselves to a plain, well-built, business bicycle, built for business. We sell our product for cash, thus doing away with the heavy losses, met with by most manufacturers, from irresponsible dealers. We sell our goods to the dealer only. We will not quote prices, under any circumstances, to irresponsible, curbstone agents. We prefer the local Hardware dealers to the jobbing trade, and our Clippers will be sold to this trade only. We were the original manufacturers of high frame bicycles. The patterns, which will be so commonly used in 1895, are exact counterparts of our 1894 lines."

In a later letter, covering the question in detail, the Grand Rapids Cycle Co. say: "Your idea in publishing this information is a good one, and you will find that it will do a vast amount of good, for the very reason that it will be read by every Hardwareman who is contemplating handling bicycles. As the Hardware trade may, eventually, take up wheels, and as the manufacturers of bicycles will, sooner or later, realize that the Hardware trade is their most available, and at the same time best, source for the outlet of their products, we feel reasonably sure that bicycle manufacturers must cater to this trade through the columns of journals which go to it. We believe that the press, and the trade at large interested in this industry, should use their influence with manufacturers and induce them, if possible, to keep the list price up, and conform their methods of doing business to that of the Hardware trade, which is an older and very firmly established business. Bicycle makers, certainly, cannot expect to reorganize the Hardware business. We have long since arrived at the conclusion that we would prefer to conduct our business on Hardware lines, and are bringing about this state of affairs as rapidly as we can consistently. We shall, therefore, list our wheels at $100 and $125, thus making it possible for our customers to get a good price for the wheels, if they are in a locality which they control, and where they can get any price for the goods which they may fix.

"Our net prices will be low, considering the quality of the goods, which we intend to, and have been, furnishing; in other words, we are making a bicycle that will compete with any wheel on the market, but we are selling at a legitimate profit to us, preferring to make our prices low, keep our expenses down, and thus realize a reasonable profit on our investments. We do not intend that any maker shall excel us in material, workmanship, design, style or finish. The members of this firm have been in the bicycle business a good many years, and they believe they know what the trade wants, and are capable of producing bicycles, which will be strictly up-to-date in every detail. Our past year's experience has convinced us that we are right in these beliefs.

"Our No. 20, a new wheel which is strictly high grade in every detail, weighs from 26 to 29 pounds, actual scale weight, and by the fitting with lighter tires, saddles and pedals, this weight may be reduced from ½ to 2 pounds. This wheel is made of Shelby tubing, which we have found, after a careful test of the various tubings, to be equal to any foreign tubing at the same weight. In some respects it is superior.



"We use a solid forged fork crown, oval in pattern, and fitted to flat sides, which taper from 1 inch to ⅝, and is reinforced by a method of our own, using blades of sheet steel, that add very little to weight, but increase the strength about 200 per cent. over and above any other reinforcement we have ever tested. The rear forks are reinforced in the same manner, as are also the seat mast and lower rail. The rear forks are ¾-inch tubing, tapered to ⅝. The crank hanger is what is known as the barrel bracket, which allows of as narrow a tread as is safe or advisable. We use tool steel bearing cones, tempered in oil, and drawn to a straw color. We will guarantee these cones to be equal to any ever put into a bicycle, and superior to most of them. We will replace, free of charge, any cone which shows wear in the least. Our bearings are absolutely dust proof. We guarantee this. They have been successfully used during the past year, and we have yet to find a single customer who has complained of them. We are using very large tubing of thin gauge, having found the same weights in large tubing to be stronger and less liable to crystalize from vibration. We shall use a pedal of our own make. It is the only dust-proof-at-both-ends pedal we have ever seen.

"Our ladies' Model B is the same wheel in material and workmanship, but built for ladies' use only, and will sell at the same price. In addition to these two wheels, we shall continue to make our No. 24, and will also build a Light Roadster, which weighs from 19 to 22 pounds. These we will make but few of, as we anticipate the great demand to be on our No. 20 and Model B. We sell our product on, practically, a cash basis, as we allow a cash discount sufficiently large to warrant our customers in availing themselves of this discount. By this method we avoid the heavy losses which most other manufacturers meet with, owing to their eagerness to sell goods to everybody, responsible or irresponsible alike. Our losses during the season of 1894 amounted to less than 40 cents per wheel, and as our appropriation for advertising is limited to $1.50 per wheel, you can readily see we are in a position to not only meet any competition that may come our way, but to lead nearly every manufacturer in the business, so far as low prices are concerned, and still realize a living profit."

The League Bicycle Co., Hartford, Conn., say: "We cannot afford to make our wheels for less than $125, and at the same time give the cyclists the benefit of the finest material and first-class workmanship. We consider it of the utmost importance to both rider and manufacturer that the price of $125 be maintained for the season of 1895. We do this regardless of what other manufacturers may do, as every machine that the League Cycle Co. turns out is a special cycle entirely different from other lines."

Improved Lawn Mowers for 1895.

We have much pleasure in calling the attention of the trade to the line of improved lawn mowers of 1895, now being sent out by the F. & N. Mfg. Co. of Richmond, Ind. Thorough appreciation of the wants of customers and the production of a strictly first-class article have resulted in drawing to this firm a large and increasing patronage. In spite of the business depression which has affected almost every line of manufacturing, this firm have received flattering assurances for the coming season's business, orders having been already placed from England and other European countries, Canada, Australia and the Cape Colonies, while the prospects for the American trade

are most encouraging. They inform us that the lawn mowers for 1895 "possess many points of superiority over last season's samples, among which may be mentioned an oil-tempered tool steel cutter-bar, which with the combined spiral and shear cut reel, makes an ideal cutter. The machines are also fitted with a Micrometer Adjustment, a novel and exceedingly meritorious contrivance for which letters patent have been secured, and the reel shaft bearings are made of phosphor Bronze, which is generally acknowledged to be the best material for durability and ease in operation. These improvements, combined with the heavy grass attachment, housed ratchet and other economical devices, together with lightness, durability, and positive action place these mowers in the front rank."

American Expositions in South America.

There is a movement on foot looking to the establishment of expositions of American manufactures, under American auspices, in the South American republics. The suggestion comes to our hand in the form of a letter written by Thos. P. Egan, president of the J. A. Fay & Egan Co., Cincinnati, Ohio, to the president of the Manufacturers' Association of Cincinnati and Hamilton County, Ohio. In that letter Mr. Egan says:

"The plan is to organize the manufacturers of the United States into a compact body, so that there will be some organization. The interest of the manufacturers is the advancement of their trade with all the nations of the earth, and we expect to accomplish the following:

"First—The renewal of the reciprocity treaties between the United States and all foreign countries, which treaties were rescinded by the recent Wilson or Gorman tariff bill.

"Second—To hold World's Fairs, or United States expositions in the Capital of each South American country; the first exposition to be held in the City of Mexico, not later than 1897.

"Third—To devise ways and means to better and facilitate trade with our South American cousins.

"These, of course, are only some of the points to be taken up. Your Manufacturers' Association being an organized local body, and right in line for handling this business, and being a member of your organization, I thought best to submit the matter to you, and suggest that your organization call a special meeting of the manufacturers, so as to start the enterprise. Part of this plan, viz.: the holding of a Mexican exposition under the patronage of President Diaz, originated with 'Dixie,' of Atlanta, Ga., and a committee of manufacturers of Cincinnati, who decided that as Cincinnati is very central, and easily gotten to from north, south, east and west, the convention will be held there."

The further progress of this movement will be watched with interest by the manufacturers of America.

A Simmons Co. Club.

It is reported that E. C. Simmons, president of the Simmons Hardware Co., has decided to carry out the plan for making a club house of his old residence, No. 2927 Olive Street, for his employees. It is said that Mr. Simmons has issued a circular to his clerks, calling for suggestions as to the best methods of conducting the club and asking those who wish to, to send in their names as members. It is understood that there is no compulsion in the matter, and only those who desire will become members.

Mr. Simmons, in his usual modest way, declined to discuss his philanthropic scheme to a *Republic* reporter, and said that no details had as yet been arranged. He admitted that the establishment of the club was a certainty, but desired to avoid as much publicity of his personal plans as possible.

Mr. Simmons has recently been appointed lay reader for St. James' Episcopal Church, the pulpit of which was left vacant by Rev. P. W. Fauntleroy, who accepted the pastorate of Mount Calvary Church. He was the lay reader of the Advent Church for a long time while that church was without a rector, and has been a vestryman in the Church of the Holy Communion for a number of years.

Mr. Simmons has always been active in church work, and is recognized as a leader among the workers in the Episcopal Church, and his new plan is in line with his progressive ideas.—*St. Louis Republic.*

American Tool Co.'s Tool Chests.

The American Tool Co., No. 200 West Houston Street, New York, are making a greater variety of styles of Tool Chests, as is claimed, than was ever before offered by an other manufacturer. The tools placed in them are all of warranted steel, the chests being made with either patent locked or hand dovetailed corners, and from selected hard wood, oiled and nicely varnished and well finished to suit the wants of all trades. The company carry a full line of youths', gentlemen's, carpenters' and machinists' empty Tool Chests, the latter being adapted to the wants of dealers in machinists', railway and telegraphic supplies. A very desirable line of housekeepers Tool Chests is also carried. Again, there are special chests adapted to the wants of the toy, notion, dollar and variety trades, fitted up in any quantity to suit the largest buyers.

The range of prices will give an illustration of the variety carried. Chests can be bought as low as three dollars per dozen, and some cost in the carpenters' line as high as $266 each. This latter chest is made of superior quality, and well seasoned and extra heavy chestnut and black walnut woods, elegantly finished in oil and varnish, neat and extra strong hand dove-tailed corners, extra heavy and ornamented bands and bases, with four inside extra large sliding drawers and partitions, bit, saw and plane racks and slide. This chest has extra strong and heavy folding surface handles and hinges, with double link spring tumbler lock. It contains 283 extra quality assorted tools. Such is the description of a tool chest of the present day; but not much in request, as the great variety of cheaper chests suits the needs of most persons.

Magnolia Metal Co.'s Successful Injunction Suit.

Judge Lacombe, of the United States Circuit Court, granted, on October 29, 1894, the Magnolia Metal Co. an immediate injunction against the Nassau Smelting Co., of New York City, composed of Benjamin and Moses Lowenstein, restraining them from selling a metal called the Mongolia Metal, which they have been assiduously offering in the New York market and elsewhere, claiming it to be the same as Magnolia Metal and confusing the trade very generally with the similarity of the names.

The Magnolia Metal Co. inform us that they will prosecute anyone to the full extent of the law, who infringes in the slightest degree on their patent or trade mark rights.

Benjamin O. Dana.

Benjamin O. Dana, a well-known and prominent resident of South Boston, Mass., died at his residence some evenings since after a short illness. He was one of the best known Hardware dealers of that city, and was for a number of years president of the Dana Hardware Co. He was born in South Boston, and always took an active interest in matters pertaining to the district. At the time of his death he was thirty-four years of age.

"A Bit of News" is the heading of a leaflet received from the Monarch Stove Co., Mansfield, Ohio, upon which the following information appears: "On the 19th day of September, the ownership of the business pertaining to the manufacture and sale of 'Monarch' Gas and Vapor Stoves, heretofore conducted by the Baxter Stove Co., changed hands and became the exclusive property of Emmet C., Berry A. and Edwin D. Baxter, the new firm to be known as the Monarch Stove Co. This step was found to be necessary in order to give to the 'Monarch' business the undivided attention which its rapid and extensive growth peremptorily demanded."

F. E. Myers & Bro., Ashland, Ohio, have just completed a brick addition to their already extensive factory. The new building is 50x175 feet, and three stories high. It will be completely equipped with the best machinery on the market. This new building, with other improvements in their plant, will increase their capacity about one-third.

At a meeting of the manufacturers of sledges and heavy hammers, held last month, it was decided to advance prices, the new discount being 70&10 per cent. There are three manufacturers in this line in the country, and it is believed that the advance can be maintained.

We acknowledge the receipt of a little book entitled "Accurate Tables of Diameters, Areas, Weights, etc., of Cold Drawn Seamless Steel Tubing." Calculated and published by O. J. Edwards, Ellwood City, Pa.

Review of the Markets.

Money: The event of the past fortnight has been the death of the Emperor of Russia, and while this was expected to seriously affect the markets of the world, on account of the complications that might arise upon the accession to the throne of a warlike successor, the event was received with equanimity. The peace of Europe is hardly in danger for some time to come. Money remains plentiful, with little demand for either call or time funds. Gold shipments seem to have ceased, our exports of produce, cotton and manufactures being in good quantities. Sterling exchange, however, is held at figures which are very near the exporting point.

In a general way the election has restricted business, but the volume has been very satisfactory, commission men reporting a large amount of mail orders, more so than for a year past. There is some feeling that the result of the elections will improve confidence in the future.

In heavy Hardware there is a good business for this season of the year. In Strap and T Hinges the manufacturers report a very fair business, and it is well distributed, which reflects a healthy state of affairs.

In shot, the market is quiet and unchanged, dealers taking small lots, and meeting only requirements.

The market for India Rubber is somewhat restricted in volume, but values are firm. There is a good demand for manufactured goods for the season of the year.

Window Glass for some time past seems to have been fairly demoralized. Prices have advanced on the other side, and the domestic manufacturers have cut down wages, both factors operating to cut away the market from under the feet of the importer. The agreement made among the importers has met with the inevitable, for as is usual in such cases, the backslider has cut prices secretly, until all have joined in a war of prices. This demoralization has extended to the domestic glass market.

In paints, the business has been very fair, notwithstanding the absorbing character of the active political contest. There is considerable painting going on, consequently there is a good demand for mixed paints and colors in oil. White Lead is slow of sale, but reported steady. Red Lead is in good demand. In Litharge there is an improved demand from the glass trade. Putty is active, manufacturers being busy. Glues are in moderate request, with steady prices.

Metals: Business is very quiet. In finished material there is a small demand at very low prices. Quotations are for No. 1 Foundry, $12@$13; No. 2 Foundry, $11@$12; Grey Forge, $10@$11; Southern No. 1, Foundry, $11.50@$12.50; No. 2, $10@$11.

Pig tin is weak in tone, with lower prices. Copper is strong, with rumors of large deals between consumers and producers. For Lead there is little demand, consumers only buying from hand to mouth. Spelter is firmer, the supply being light. Antimony is quiet. Tin-plate is quiet, with an everyday demand.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Nails: In Wire Nails the volume of business continues very satisfactory, some large orders having been given within the past fortnight. At the Western mills a quotation of 95 cents is given and out of store in New York $1.20@$1.25. In Cut Nails the market has a fair tone on a basis of 90 cents for carload lots in New York. The Barb Wire market is dull, with some demand for future delivery. Prices for carload lots at Pittsburg are $1 95.

The manufacturers of shovels are not in accord with each other, and consequently prices have receded considerably within the past fortnight.

The manufacturers of hammers at a recent meeting agreed to advance the prices twenty-five per cent. As there are few of these manufacturers, it is to be presumed that there will be little difficulty in maintaining the new list.

There has been little change in the prices of cutlery since the new tariff went into effect. The competition that existed before had adjusted prices in such a way as to leave little chance for any other laws than those of supply and demand to act. In razors there has been some decline in prices, but not to any great extent. The trade in scissors goes on in an even sort of way.

Clapp & Co., bankers and brokers, New York, in their last weekly market letter, speak as follows of the financial outlook: "Natural resources, physical energy and mental ability of the American people continue to receive expression through the ballot. The effort to create poverty in the midst of surplus products may now give way to a rising tide of prosperity. The latest re-appraisal of manhood may be extended to other values. From 1860 to 1893 inclusive, the population of the United States increased 113%, money in circulation increased 268½%, foreign trade 149%, public debt net 1000%. Production increased to 18 billion dollars annually, and wealth to 64 billion, total consumption equalling 90% of production. During the same time domestic pig iron decreased 36%; coal, 28½%; cotton, 30%, its product, 33½%, and wool decreased 49%; farm animals increased in number 81%, and their total value January 1, 1894, including the field crops of previous year, were estimated at 5½ billion dollars, or an average of about $1500 for each of the five million farms. Three thousand seven hundred and fifty-five National banks, October 2nd, reported to Comptroller Eckels, individual deposits $1,728,418,819, against $1,765,422,988 on September 30, 1892; loans and discounts, $1,991,874,273, against $2,153,498,829; lawful money, $402,894,712. Judging from the recent election, 'A part of the people can be fooled all the time, but all the people cannot be fooled all the time.' We look for more activity and changes in the general market."

THE CLEVELAND TRADE.

It is difficult to write anything that is of particular interest to the trade at the present time.

The excitement attending the approaching election, doubtless has greater or less effect upon the volume of business, and we have found it without any particular life, although the improvement over 1893 which commenced in August has continued in about the same proportion up until date. Values have sustained such a large shrinkage that the volume of business is necessarily very much less in dollars and cents, than what would be considered a normal business. If such shrinkage is to continue, or such low values rule indefinitely, there will be only one solution of the problem which confronts all business men and that will be a further reduction of incomes to employees, and a general reduction of expenses all along the line.

We sincerely hope that no such necessity will arise, but that when trade opens in the spring, there may be such a decided improvement that everybody will be satisfied. In the meantime, it behooves everyone in business to encourage his neighbor, and to hope for better conditions soon. We cannot chronicle any marked demand for any special articles.

Orders received are very small and very numerous, and jobbers are kept fully as busy as is the case when they were doing a very large business. Collections are very satisfactory, which is the one bright spot in the situation.

THE MCINTOSH-HUNTINGTON CO.

THE MINNEAPOLIS TRADE.

During the first two weeks of October business increased quite materially, and the outlook seemed encouraging, but during the last two weeks the approaching election was the all-

Digitized by Google

absorbing topic throughout the Northwest, and business has suffered in consequence. By the time this is in print the election will be over and we shall know what the future has in store for us. We firmly believe that the improvement will be much more rapid if the Republican party are successful generally, so that they have control of the House and Senate, but should we be unfortunate enough to elect a Populist Governor in this State, we are sure that Eastern money will be drawn out as soon as possible, and as the Northwest as a whole is a large borrower, it would affect all of our citizens directly or indirectly.

With the extreme low price of wheat farmers are not having a very easy time, especially those who have mortgages on their farms and machinery. A bushel of wheat will buy nearly as much to-day as ever, but it will not go as far towards paying the old debt. Diversified farming is being preached by many of our leading newspapers, and we hope good results may come from it. The saw mills are all practically closed down now after a large season's cut of about 500,000,000 feet. The flour mills are still running full and making large shipments as is usual before the close of lake navigation. An effort is being made to shut down all the leading mills in the country as there is an over production, but it is hardly likely that this effort will be successful.

While this has been considered a very dull year in building circles, still, as a person drives about the city, he will be surprised to see the large number of houses, and flats in particular, that have been erected during the year. While rents have been reduced somewhat, there are very few vacant houses. There are only two first-class stores without tenants on Nicollet Avenue, our principal business street. All things considered, it would seem that we have passed through the panic as well or better than almost any city of the size in the country.

The loggers are busy sending men, teams and supplies into the burnt district where the logs will have to be cut this winter, or they will be worthless if left for another season.

We shall all be glad when our books for the year 1894 are balanced, and hope the year to come will show better results.

W. K. MORISON & CO.

THE LOUISVILLE TRADE.

The slight improvement noted in our last letter continues, and has become more marked during the past week. Orders continue small, but their number increases daily, and the variety of articles called for would seem to indicate a quickening of the trade pulse. This, when we consider the excitement attending the election, which tends to divert the average citizen's mind from industrial to political channels, leads us to hope that the worst is over, and that the improvement indicated is but the precursor of returning confidence, which, in our estimation is absolutely essential to a prosperous trade.

When stocks of goods have dwindled to skeleton proportions, as is now the case outside of the large distribution points, and even the uninitiated can see that ruling prices permit exceedingly small, if any, profit to the manufacturer, and knowing that prices of most goods in our line are lower than ever before known or dreamt of, is it not reasonable to suppose that common sense and good judgment will impel dealers to carry fair stocks now when doing so costs so little?

We do not look for high prices, but deem reasonable advances over the present scales inevitable when a fair demand sets in.

Bars, hoops and sheets remain unchanged. The same may be said of cut and wire nails. Some bolt manufacturers seem to have waked to a realization that they were too liberal in the amount of discounts offered, and have made curtailments accordingly.

We have heard of conferences between the bar mills, the wire and wire nail men, and even the cut nail makers, with a view of "pooling," "associating" or "agreeing" in order to end the harassing competition now pursued. We see no objection to such a course if properly carried out; in fact, we think it is nobody's business but their own. These industries ought to be conducted in the interest of the owners, and should furnish fair returns for capital invested. And when this result is not attained the fault often rests with their sales department. Everything being equal, John Doe should get as much for his goods as Richard Roe.

A certain quantity only of goods will be consumed in a given time, and a reduction of a dollar a ton now, will not cause more to be used. Assuming such to be the case, and knowing that his competitor will fight to hold his trade, it strikes us that John Doe displays neither ability nor discretion, when, in times like these he goes to Richard Roe's customer, and offers him lower prices than the latter does. A fight is inaugurated to the detriment of both manufacturers and the advantage of the buyer, and the damage is not restricted to Doe and Roe, but spreads broadcast, to the great injury of that particular line.

These comments will apply to representatives of the jobbers as well as the manufacturers.

In the absence of a decline, and assuming that goods have been purchased by your competitor at lowest market rates, there is no excuse for cutting his price; it is a confession of inferiority and provokes retaliation, which does harm all around. What we want now is a better feeling and better prices, and as everything here below must have an end, we are looking for a change in the other direction.

Our collections have been good, and we have heard very little "squealing" on money matters. This is no surprise, when the excessive cautious policy now pursued by buyers is considered. We have information that many small tenant farmers in the cotton section are discouraged by the low price the great staple is bringing, and will abandon its culture next season. This means more food products and less cotton, and will, we think, be of great advantage to that section.

We hear of immense enterprises and large investments being contemplated South of here in the near future.

We suspect the elections have been the cause of these reports, and do not imagine there is anything more substantial than wind back of them.

THE TODD-DONIGAN IRON CO.

THE DAVENPORT TRADE.

There is an unusually large demand for barb wire, wire nails and window glass at present. Hand sleds are beginning to move slowly and trade in tin and terne plates is above the average for this season of the year.

Large stocks of forks, rakes, scythes, scythe snaths and fork handles are being carried over; the cost of this line will be less the coming season, making it doubly uncomfortable for the unfortunate. We claim for Iowa the largest manufactory of these goods in this country.

The Battendorf Metal Wheel Co. works were burned on the 30th ulto.; loss in excess of insurance, twenty to twenty-five thousand dollars. They will be rebuilt.

L. H. Nutting, of this city, a member of our company, has invented, and will soon place on the market for sale, an automatic scale which will be appreciated by the Hardware trade and also by the importers and jobbers and manufacturers of goods sold in small packages.

Water will soon be let into the Hennepin Canal, giving us access to and cheap transportation from extensive coal fields in Illinois hitherto monopolized by railroads and railroad interests.

SICKELS, PRESTON & NUTTING CO.

THE PHILADELPHIA TRADE.

It is frequently the case in reading Old World papers to see references made of separating Church and State, and while we are sorry to say this is not the question to cause an immediate concern in this country, we wish it were possible to divorce business from politics. The two should not be connected in any way, and it is hard to see why the hard-working business world should not be allowed to go on in its own way, and do business in its manner without being subjected to the constant interference of political questions.

The tariff agitation is a case in point, and just now, we have been experiencing the customary election law in business. It is always the case that for a week or ten days previous to an election business slackens, only to pick up after the smoke of the election has cleared away, and matters are on a stable basis for another year.

This letter is written on Wednesday, the 7th, and we have

Digitized by Google

just received the news of the election of Tuesday, showing a wonderful change in the temperament of the American public since the memorable election of two years ago. It is now to be hoped that the election of yesterday will permanently settle the tariff agitation for some time to come, and we think that almost all business men, no matter what their political faith may be, will agree with us in asking: "Let us have peace." With this certainty, business should now begin to improve and it is to be hoped that prices will stiffen so that manufacturers, jobbers and dealers may purchase with some certainty in the future.

There have been very few changes in prices since our last letter. The market is in the waiting state, and manufacturers are strongly inclined to advance prices at the earliest possible date. Rivets advanced on the first of the month about 20 per cent., and there is talk of advances in other lines of goods which are very near the raw material.

It is a pleasure to say that sales show an increasing variety of goods, and tools are once more in demand, apparently showing that mechanics are once more earning wages, and if so, better times must prevail. BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

There is little new to report since our last letter. Business still continues very good (no rush of course), but just a steady in-coming of orders and a consequent output of stock. The goods for the most part are seasonable, with an occasional assortment of winter goods.

The month of October presented some very pleasant surprises, both in the volume of business done and in the steady demand which characterized the business throughout that period. So far, November possesses the same features. Even the elections, with all their attendant distractions in the way of torchlight processions and campaign oratory, have had but little effect this year in stopping the wheels of trade. The politicians seem to have lost their power either for good or evil. The sincerity of their political pledges—the security of their party platforms, are too well-known to the business community to be any longer trusted. The last Congress gave unmistakable evidence of this, and the result of last Tuesday's election is nothing more than a case of retributative justice. The American public still hold the balance of power in their own hands. It is to be hoped that this politico-tidal wave will sweep with it those recreant representatives who abused the trust reposed in them.

The opening of the ducking season along the Susquehanna has largely increased the sale of loaded shells and ammunition. Taken throughout, the gun department of our business has been very satisfactory. Other goods finding ready sale just now are husking gloves and pins, lanterns and lantern globes, shoe soles, sheet zinc, meat cutters and stuffers, butcher knives and carvers. From the lumber section comes a fair demand for cross-cut saws, while wood saws and bucks are going freely. Inquiries for skates and snow shovels are frequent.

As for prices, they are low—very low. We would like to be able to report an upward tendency; but for the next two months we see nothing in the situation to justify even a moderate advance. Of course, there have been some few minor changes; screw hook hinges have dropped to the same level as Strap and T Hinges—a natural sequence which was anticipated some time ago. On the other hand, the manufacturers of Hammers and Sledges have gotten together and advanced prices. How they ever accomplished it remains a mystery. Perhaps by some subtle alchemy, they hope, out of this modest advance, to bring forth a dividend payable January 1, 1895. *Is a well to be filled with dew?*

We note with satisfaction one feature of the present situation that promises much for the stability of prices. It is this: Last spring the manufacturer was consumed by one desire—to get business, to get it at a profit, if possible; if not, get it anyhow. All sorts of devices were resorted to in order to make a sale. "Straw quotations" were sent out much as kites were formerly sent up to test the air currents. There is no necessity for such a practice, and the only good accomplished was to show the manufacturer how the "wind blew." This suicidal method has entirely disappeared, with a consequent result that prices have sought their natural level, and promise, at least, to decline no further. With the limited demand, this is as much as can be expected. Collections are fairly satisfactory.

THE TABB & JENKINS HARDWARE CO.

THE GRAPHITE TRADE.

October has been eminently satisfactory in a business sense. Its record of sales has smoothed down some of the wrinkles caused by its namesake of '93.

In every department of our manufactories there is the old bustle and activity of busy people; and visitors being shown through, invariably exclaim: "It does not look like dull times with you."

All our products share the favor of liberal orders, pencils, crucibles, paint and graphite lubricants, with a noticeable increase in stove polish, and we still believe that the business of this country has overflowed the bounds of unnatural obstruction and the prospect for activity is brighter. An increase of business naturally creates a corresponding demand for supplies, and our purchasing department is one of the busiest in the office.

Three lithographic firms are at work upon new show cards, and a beautiful cover for a pencil catalogue now in the printers' hands which will contain several pages of new goods.

Collections are good, most of the larger buyers discounting their bills for cash. JOSEPH DIXON CRUCIBLE CO.

Jersey City, N. J.

A Hint from the Powder Trade.

The San Francisco *News-Letter* says: "The powder business is very active just at present, and an immense trade is being transacted with all the mining districts west of the Rocky Mountains. It is noteworthy that the powder business is always the first to be affected by the vicissitudes of general trade. When silver mining was killed some years ago powder manufactories began to suffer immediately, and shortly afterwards the wave of depression swept over the whole western community. Now they are beginning to feel the effects of the revival in mining, which will undoubtedly develop later in other lines of trade. From what the leading men in the business here say, they are turning out more powder than they ever have done in the history of the State. Gold mining in California has again been taken up in earnest, and old mines abandoned in years gone by are now being worked to good advantage."

THE BEST OILER IN THE WORLD
Is the "PERFECT" POCKET OILER.

HALF SIZE.

This Oiler does not leak. Regulates supply of oil. It has won every test in competition with other oilers. Be sure to get a "Perfect." Price, 2½c. each
Our "Star" Oiler is an excellent oiler at 15c. each, and is equal to any oiler in the world except the "Perfect."
CUSHMAN & DENISON, 172 9th Ave., N. Y.

WE ARE HEADQUARTERS FOR
STEEL TAPES.
Don't buy foreign goods when you can buy a better article of domestic manufacture.
We manufacture the best and most complete line of these goods in the market.

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

A BELT BY ANY OTHER NAME WON'T WEAR AS WELL.

Cleveland Rubber Works
of the Mechanical Rubber Co.

CLEVELAND, OHIO.

Help Wanted.

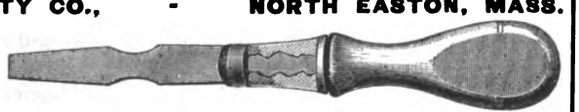
HARDWARE and Cutlery salesman for New York City and vicinity; also salesman for New York and New Jersey. Address H. J. C. & Co., care HARDWARE, 143 Chambers Street, New York.

Side Line Wanted.

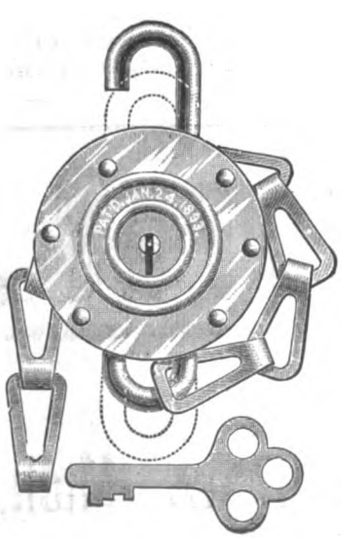
A **HARDWARE commission house** of New York City, centrally located, with ample room for samples and stock, and abundance of capital to carry out any agreement or contract which they may enter into, wish to **negotiate with manufacturers of staple lines of Hardware or specialties.** For further particulars, address Commission, care HARDWARE, No. 143 Chambers Street, New York.

WANTED by traveling man, long experience in New York State and Pennsylvania, Hardware specialty as side line, which will pay well for good work. Address Traveler, New Osborne House, Rochester, N.Y.

For Sale.



A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.



A new filter is being brought out which possesses many advantages. It consists of a piece of rubber tubing an inch and a half long, which fits into a small metal case or tube perforated at its extremity. Inside the tube at the bottom, against the holes, is pressed a small piece of sponge, which comprises the filter. The rubber end of the tube is pressed on to the cold water tap, and thus the filter is made perfect. The idea is not a new one, having been used in the South to filter the muddy water of the Mississippi for many years.

NEW ENGLAND SPECIALTY CO., - NORTH EASTON, MASS.

Manufacturers of

Screwdrivers, Can Openers, &c. Sheet Metal Punching and Nickel-Plating.

NEW BICYCLE LOCK.

Manufactured by

The Smith & Egge Mfg. Company,

Bridgeport, Conn.

Weighs less than two ounces; small enough to be carried in the vest pocket; is strong and made of best material. The shells are made of corrugated brass, shackles of steel rods, and is supplied with fifteen inches of STRONG STEEL CHAIN, all NICELY POLISHED and NICKEL-PLATED. It has four tumblers, making it PRACTICALLY UNPICKABLE; is self-locking, and the rider needs his key only to unlock it.

Sells on Sight.

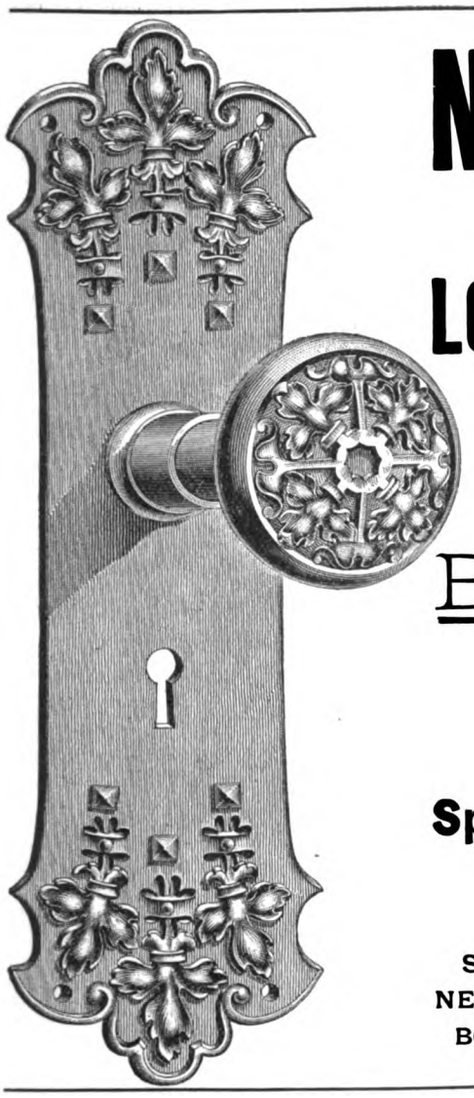
Aluminum in the Army.



The United States War Department is following the lead of the navy in testing the value of aluminum for a variety of military equipments. The success of Wellman's aluminum boats in the Arctic exploration has stimulated such inquiry. Experiments have been under way for some time with a view to the construction of aluminum life boats. Life preservers of the same material are considered practicable, and it is probable that all the small boats of the navy hereafter built will be equipped with air-tight aluminum tanks in bow and stern to keep them afloat if overturned. It is in the line of small equipments that the army is expected to utilize the metal. Samples are in the Ordnance Bureau of aluminum cups, belt buckles, hooks and horseshoes. "The substitution of aluminum cups for tin seems entirely practicable. The regulation tin cup weighs eight and a half ounces, while one of the same size made of aluminum weighs but three and three-quarter ounces. The lessening of marching weight is one of the problems which always is before the officers who superintend the matter of equipments. It is hoped in the near future it will be found practicable to use the light metal not only for drinkng cups and dishes of the soldier, but for bayonet scabbards and other accoutrements in which strength is not the first requisite."

One of the most remarkable events in the history of the curious has just come to light. A short time ago Haynie Bros.' delivery horse ran off. In passing Howorker's shop a loose tug caught on a long wire. The horse turned up Main Street, dragging the wire at a lively pace. George Jenkins' horse was hitched in front of his Hardware store, and as Haynie's horse passed the wire took both the hind shoes off of Jenkins' horse.—*Slater Index.*

Bicycle men still report a good business in their line. The weather has been fine, more so than is usual at this season of the year, and this has stimulated the use of the wheel. All manufacturers are making extensive preparations for the exposition which will take place in Madison Square Garden next January.

Importers of cutlery report the market somewhat over-stocked. The withdrawals from bond in the custom houses released a large quantity of goods which in turn have been somewhat slow of sale.

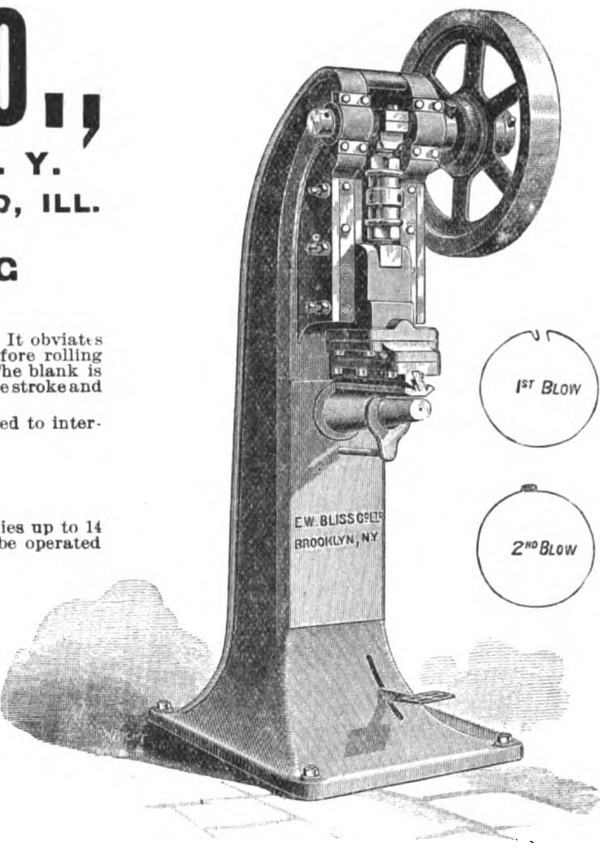
100-104 W. Washington Street, CHICAGO, ILL.

DUPLEX FOLDING AND SEAMING MACHINE.

THIS machine is designed to facilitate the manufacture of lock-seamed tinware. It obviates the necessity of using a bar-folder for forming the hooks on the body blank before rolling same on the forming machine. Its operation is exceedingly simple and reliable. The blank is first formed in the rolls then placed in the machine, which forms the two hooks at one stroke and closes them at a second operation. The advantages obtained are:



First—That the blank is rolled in the flat, not having any hooks previously formed to interfere with the operation.

Second—That both edges are hooked at one blow.

Third—That the hook forming and closing are done in one handling.

Fourth—That the seam is more uniform than if started in the bar-folder.

The horn can be arranged to throw the seam inside or outside. All sizes of bodies up to 14 inches long can be done on the one horn. These horns and forces are not adapted to be operated in presses having more than ½ inch throw.

THE STILES & PARKER PRESS CO.

Geuder & Paeschke Mfg. Co.,

MANUFACTURERS OF

Tinware and Sheet Metal Goods.

St. Paul Ave. and 15th St.,

MILWAUKEE, WIS., Oct. 25, 1894.

Gentlemen:

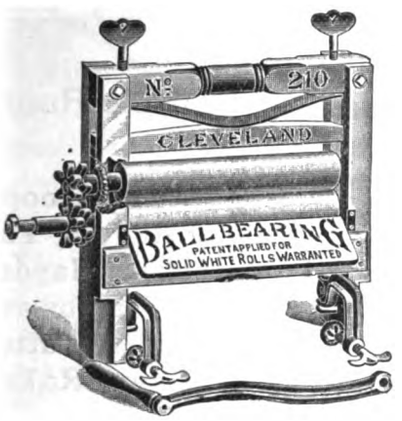
We frequently receive letters from good merchants asking for quotations on "Cream City Flour Bins and Sifters," and adding that they feel disposed to place an order with us, provided our price is as low or lower than they have been accustomed to paying for other makes.

While we appreciate the courtesy, which prompted the inquiry very much, and have no fault to find with the desire to purchase goods at the closest possible figure, we regret very much that we cannot meet the views of our friends, for the simple reason that we have never learned the art of giving a twenty dollar gold piece for $19.00 in currency.

Our Cream City Flour Bin is made of IX Tin, nicely japanned and ornamented, and has many points of excellence over others, which cannot fail to commend themselves to careful observers. They cost a trifle more, but will outlast three of the ordinary kind.

We furnish 500 elegant booklets free with an order for one dozen or over, and the advertisement you receive as a result, is alone worth more than the price of the bins.

Respectfully yours,



The Geuder & Paeschke Mfg. Co.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

WE'RE SO AFRAID OF THE INCOME TAX

That, to reduce our profits to the proper limit, we expect to sell Phillips Screens very cheap the coming season.

"WE DON'T SAY WE ARE DEMOCRATS,"

but perhaps Uncle Sam will "whack up" on losses if we do on "profits."

The quality of our product will remain first-class this season. It costs but little more to make GOOD GOODS. Then

THE AMERICAN PEOPLE PUT UP WITH MANY THINGS PATIENTLY,

but they won't stand it if we cut the quality on our goods after saying so many years that

PHILLIPS SCREENS ARE RELIABLE.

It's early to talk screens yet, but when you are ready to buy, please remember that our experience, capital and capacity of 5000 screens per day, enable us to make quality, quantity and price.

PHILLIPS SNOW SHOVELS

are Strong, Light, Properly Formed and well made from good materials.

The Conroy patented New Automatic Refrigerator Door Fastener, with lock and key.

THIS FASTENER is the most complete one ever invented. The door will push to more easily with this Fastener than any in the market. The Fastener will tighten the door by the door closing. It is the most substantial; nothing about it to get out of order. By lifting the handle quarter circle the door will open, and if it sticks it will release it. It has a new and improved lock, absolutely secure. Made for flush or raised doors, composed of brass or bronze metal in any finish desired, plain or ornamental.

THE HANDY STOVE POLISHING MITTEN.

The above illustration will give a fair idea of its appearance. It will easily fit the hand, has a waterproof back, and the whole front is made of durable and soft sheepskin, tanned with the wool on. By using the Stove Polishing Mitten, blacking a stove ceases to be dirty and disagreeable, it will make a stove shine like a mirror. The Mitten is also useful for polishing household furniture. It cannot scratch the most delicate material or varnish, while the finest possible polish can be rendered.

The Polishing Mitten can be put to many uses. Sells to almost every person you meet, always gives satisfaction. Among the uses to which it may be put are:

Polishing Stoves, Ranges, etc, it has no equal.

Cleaning and Shining Windows, Show Cases, and other Glassware, the Mitten is highly satisfactory.

Polishing Nickel-Plated Ware, such as Bicycles, Machinery, etc., the Mitten is becoming more popular daily.

Polishing Boots and Shoes, the Mitten is as much superior to a brush as a brush is to a stick. Where once used it is "a joy forever."

Cleansing and Polishing Furniture, use the Mitten and Dauber. The results are always pleasing.

Polishing Brassware, Tinware, etc., the Mitten serves the purpose better than anything else.

Manufactured expressly for the trade. They sell fast wherever introduced to HARDWARE DEALERS.
We will quote you low prices and only ask a trial order. 2 kinds of mitten and dauber made, both kinds samples 30c. to Dealers.

HANDY STOVE MITTEN MANUFACTURING CO., 122 Pearl Street Boston, Mass.

THE MILLER OIL HEATERS.

No Disagreeable Odor. No Ashes. Light and Heat in Abundance.

No. 327. No. 3 Lift Burner. Height, 23½ inches. Spread of Base, 12½ inches. Nickel Finish.

Just the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

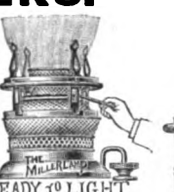
They are an Assured Success, from the fact that the Lamps used are "The Miller Lamps" **THE LATEST AND BEST.**

IN THESE HEATERS YOU HAVE A HAPPY COMBINATION: The Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The **No. 3 BURNERS** have a **FLAME OF 15 SOLID INCHES.** **"MILLER" HEATERS** have outside **SCREW ADJUSTMENT** for regulating the Wick and **PLUNGE MOVEMENT FOR EXTINGUISHING**; each one is supplied with an extra Flame Spreader so that Lamp can be used for **ILLUMINATING** when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.



A MOST IMPORTANT FEATURE.

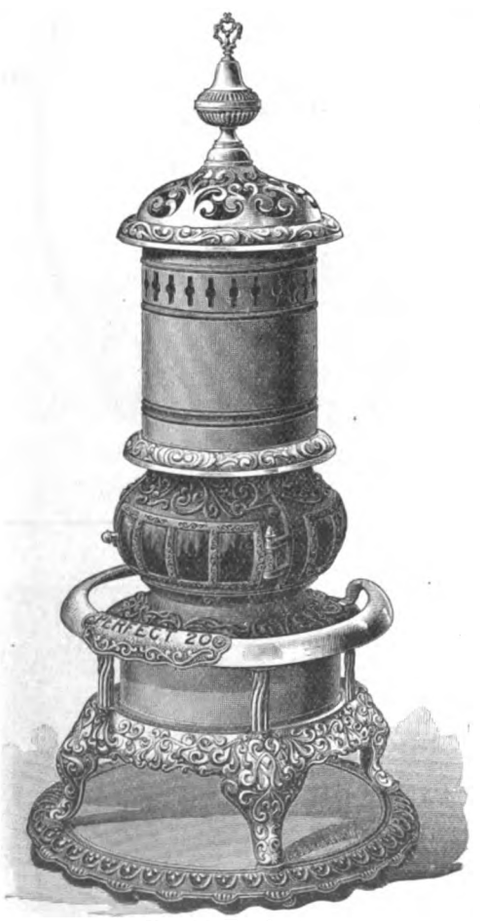
☞ All the weight of the Cylinder rests solidly on the **FOUNT** and not on the **BURNER** in these Heaters.

In **IMITATIONS** of these Heaters the Cylinder is supported on the **BURNER, a CHEAP and WEAK CONTRIVANCE,** which makes it necessary to **REMOVE THE CYLINDER** for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.



No. 328. No. 3 Lift Burner. Height, 22 inches. Spread of Feet, 11¼ inches. Russia Iron with Nickel Lamp and Trimmings.

NEW YORK. CHICAGO. PHILADELPHIA. BOSTON. PITTSBURG. SAN FRANCISCO.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Help Wanted.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Situations Wanted.

A1 CUTLERY salesman with New England, Middle Atlantic States and local trade, wants situation at once. Is also Hardwareman. Address Traveler, care HARDWARE, No. 143 Chambers Street, New York.

A PRACTICAL designer and model maker, who has some original ideas that he wishes to make practical use of, would like a position with some company or firm who are open to business of that character. Address Model, care HARDWARE, No. 143 Chambers Street, New York City.

A PLUMBER. Fully experienced and competent; capable to take charge; quick workman; moderate wages; city or country. H. Webber. care of S Fullerton, No. 228 Chrystie Street, New York City.

A PLUMBER wants a situation, city or country; capable of taking charge of shop and estimating on all kinds of work; quick workmen. Medium wages; understands buying. Address John Toohey, No. 2291 Third Avenue, New York.

AN experienced traveling man desires position with manufacturing concern to represent them in one or more large cities. Best of reference. Address A. J., care HARDWARE, No. 143 Chambers Street, New York.

AN experienced salesman in shelf, heavy and carriage Hardware, desires a situation. Can furnish best of references. Has an established trade. Address L., care HARDWARE, No 143 Chambers Street, New York.

WANTED, by a young man seventeen years of age, a position in Hardware store, wholesale or retail; has had three years' experience; best of city reference. Address Francis Pielow, No. 210 East Thirty-eighth Street.

AMERICAN, aged twenty-nine, disengaged October 15th, desires situation Twelve years business experience with leading manufacturers. Understands bookkeeping, correspondence, general office work, etc. Address American, care HARDWARE, No. 143 Chambers Street, New York.

Agencies for Hardware Specialties Wanted.

AN experienced salesman with extensive acquaintance among the larger buyers of builders' Hardware, calling frequently on the trade in Philadelphia, Pittsburg, Baltimore and Boston, and having office in New York City as agent for a first-class manufacturer, is anxious to represent an additional company. Address W. H. E., care HARDWARE, No. 143 Chambers Street, New York.

A WELL-KNOWN business man, of financial responsibility, a good salesman, will establish CHICAGO office October 1st and wishes to obtain agency of manufacturers of Hardware specialties, or any goods that can be sold to jobbers. Manufacturers of any such goods, seeking an outlet, will find this an excellent opportunity. The commercial credit and business references of the party are the very best. Address "Chicago Agencies," care HARDWARE, No. 143 Chambers Street, New York.

WANTED—Sales agency. Manufacturers of leading lines of Hardware or kindred goods, who are not properly or sufficiently represented to the jobbing trade, in territory between Pittsburg and Omaha, would do well to correspond as below. "Business," care HARDWARE, No. 143 Chambers Street, New York City.

I WANT to handle, on commission, in Philadelphia vicinity, the output of some building Hardware manufactory. Have thorough acquaintance with architects, builders and Hardware people. Good reference. Address Grant G. G. Gist, No. 721 Jayne Street, Philadelphia, Pa.

TO MANUFACTURERS.—If you desire to increase your sales communicate with the advertiser, who represents a Hardware Manufacturing Co., and is open to add to his line of representation. He has a large personal acquaintance with domestic and export trade. Address New York Representative, care HARDWARE, No. 143 Chambers Street, New York.

Side Lines Wanted.

TRAVELING Salesman wants A-1 Specialties or Staple Hardware lines. Cutlery, Sporting Goods or Tools. Ohio, Michigan and Indiana. Established trade. A-1 reference. M. I. Lee, Toledo, Ohio. General delivery.

Side Lines Offered.

WANTED—Traveling salesmen, to solicit the retail trade on a staple line of washing machines, of high grade. Liberal commissions to parties with good references. Horton Mfg. Co., Fort Wayne, Ind.

EXPERIENCED salesmen wanted to sell the best garden tool on the market. Sells to Hardware and implement houses; States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio; also for New England States. Address Lock Box 545, Rock Falls, Ill.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No 115 North Vine Street, Hazleton, Pa.

WANTED—First-class salesmen will find it to their interest to correspond with the Sun Mfg. Co., Greenfield, Ohio, in reference to their Combined Show Case Money Drawers, and other scheme goods, to carry as a side line.

Business Opportunities.

TO EXCHANGE a business lot with a brick building on same, located on North Main Street, a paved street with electric cars passing the door; also a finely improved farm of 160 acres in Sedgwick County, Kansas, all clear for a modern stock of *shelf* Hardware. Address McKnight & Co., Wichita, Kan.

Law and Collections.

PLACE your Chicago Collections and *legal business* with SAYLER & FRAZER, Attorneys-at-Law, 171 La Salle Street (N. Y. Life Building), Chicago, Ill.

PAINTED AND GALVANIZED WINDOW SCREEN CLOTH,

AND EVERY KIND OF

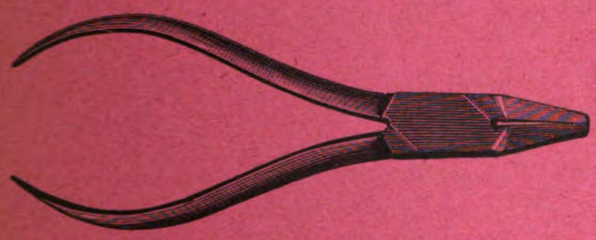
IRON, STEEL, BRASS AND COPPER WIRE CLOTH.

TRENTON, NEW JERSEY. 117 and 119 Liberty Street, NEW YORK. 171 and 173 Lake Street, CHICAGO. 25 and 27 Fremont Street SAN FRANCISCO.

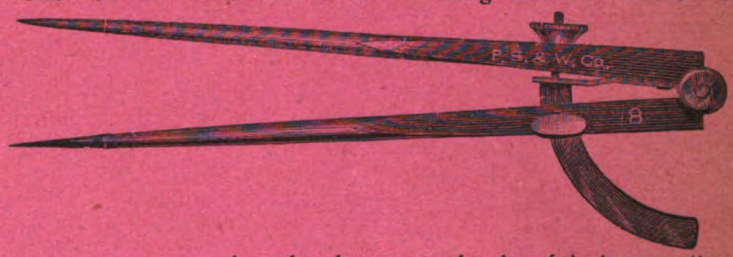
Digitized by Google

The Peck, Stow & Wilcox Co.,

Manufacture a large line of MACHINISTS' and CARPENTERS' tools of the highest grade and best quality.



SOLID STEEL SIDE CUTTING PLIERS. These goods are SOLID FORGED from the best quality of steel, have RAISED CUTTERS, and are equal in every respect to any goods of the kind manufactured. Largely used by telephone and telegraph companies. For jewelers and fine machinists, we furnish these nickel plated. The sizes are 5, 6, 7 and 8 inches.



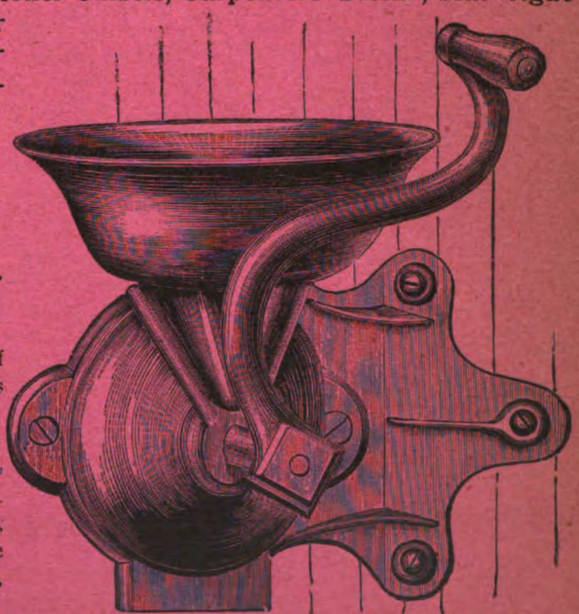
CAST STEEL SAFETY SIDE CUTTING PLIERS. The handles are covered with a patent insulation, specially made for the use of linemen, electricians and others, who wish to cut wires heavily charged with electricity. Tested to insulate against a current of 2,500 volts. The insulated covering is not brittle and will not flake off. The tool is of solid cast steel. Every trolley car should carry one of these pliers as a protection against accidents and a security of life. Made in three sizes, 6, 7 and 8 inches.

CAST STEEL PLIERS. Flat and Round Nosed. Our Nos. 20 and 25 are made of the highest grade of steel, are finely tempered, and are superior to any goods made in the country. Their quality and finish cannot be surpassed. Our Nos. 200 and 250 are made with lipped joints, are of solid steel, at somewhat less price than our other grade, but very much superior to imported goods.

CAST STEEL WING DIVIDERS. These goods of our make are so favorably and well known among the trade that they need no further recommendation.

BUTTON'S PATTERN COMBINED PLIERS and CUTTING NIPPERS. These goods are solid steel forged and guaranteed to be of the best quality. Made in sizes from 4½ to 12 inches.

AUGER BITS, SOLID CAST STEEL, DOUBLE SPUR. Furnished in sets or by the dozen. Full line, finely finished and well tempered.



Carpenters' Pincers, Saddlers' Punches, Compasses, Calipers, inside and outside, Shingling Hatchets, Claw Hatchets, Half Hatchets, Hunters' Hatchets, Boys' Axes, Machinists' Hammers, Farriers' Hammers, Socket Firmer and Framing Chisels, plain or with beveled edges, Corner Chisels, Carpenters' Snicks, Millwright Chisels, Paring Chisels, Millwright Gouges, Tanged Firmer Chisels and Gouges, Socket Firmer Gouges, Socket Firmer Paring Gouges, Drawing Knives, Razor Blade and Carpenters', Coach and Wagon makers'.

If the above named goods bear the stamp of the

P. S. & W. Co.

it will be a guarantee of their excellence.

THE POPULAR COFFEE MILL. This mill, the illustration of which is here shown, is in truth a **Popular Coffee Mill** on account of its superior quality as a grinder, and because it can be placed anywhere against the wall. It is so made that it projects at an angle of about forty five degrees from the wall, and unlike other side mills it is not necessary to find a jamb or corner on which to fasten it. It can be put up anywhere. It is well made and strong, is furnished in two sizes, known as No. 1 or 2, and can be retailed for 50 or 60 cents each. No dealers' stock is complete without this mill. We also make a large line of box and side coffee mills, of modern designs and with the latest improvements.

THE TRIUMPH

SIMPLE IN CONSTRUCTION.

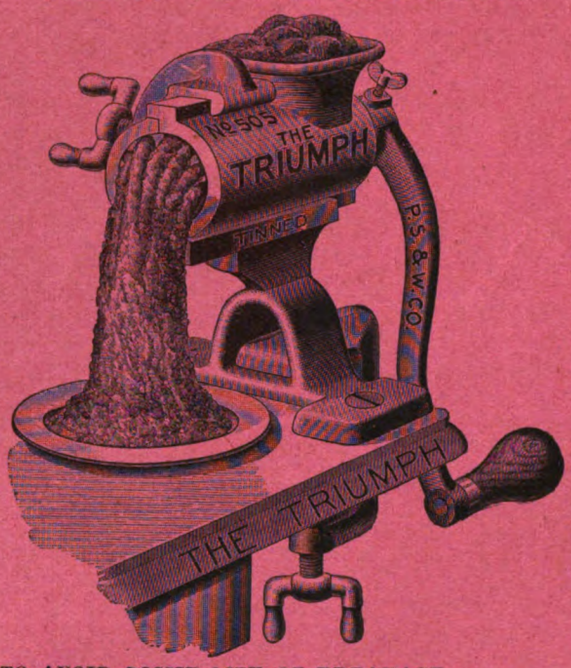
A New Meat Chopper of the Highest Grade and Best Quality

Of Great Power. Adapted to a Variety of Uses.

THE TRIUMPH OF SUCCESS. THE TRIUMPH OF ACHIEVEMENT. THE TRIUMPH OF INVENTIVE GENIUS.

All the Essential Qualities in the Best Family Meat Chopper are found in the TRIUMPH.

TINNED TO PREVENT RUST.



THE NEW

"Triumph" Meat Chopper

THE TRIUMPH OF DISCOVERY.
THE TRIUMPH OF VICTORY.

The Cheapest and by far the Best Meat Chopper ever Manufactured.

ALL TRIUMPH CUTTERS ARE TINNED.

A remarkable statement, unsolicited, coming to us under date of Oct. 21, 1892, from a party very familiar with all the Meat Cutters now on the market, and thoroughly acquainted with their method of construction, capacity and ease of operation:

"I have been experimenting all day with the **Triumph Meat Chopper.** As an all-round family machine it has no equal. For cold cooked beef, either fresh or corned, it will beat all others to death; also on all fat meat without any lean or any hard substance to hold the fat; it excels all others way out of sight. There is nothing so far devised or invented that will prepare apples for mince pies like this machine. It also cuts potatoes for hash. But I want to emphasize its capacity for cutting apples for mince pies; in this particular it excels everything in existence. While for cutting raw beef, or pork for sausages or hash, or for any other substance, it is unquestionably what you have already termed it, **'The Triumph of inventive genius.'"**

THE PARTS ARE SO FORMED AS TO AVOID POSSIBILITY OF BREAKAGE.
THERE ARE NO SCREWS OR NUTS TO TAKE OFF AND LOSE.
THE CUTTING MECHANISM NEVER GETS OUT OF ORDER.
THERE ARE ONLY THREE PARTS TO CLEAN.
IT IS THE ONLY CUTTER THAT CAN BE CLEANED BY MERELY PUTTING THE CUTTING PARTS INTO HOT WATER.

No sharpening is ever needed, therefore no extra knives or discs are required. Pieces of bone or wood in the substance to be cut, will not break it. It will cut all kinds of meat, however stringy, fat, lean, raw, cooked, dry or tough. It is a hardy machine that will endure rough usage. It will work as well every time it is used as at first, and for household use it will last a lifetime. It will also cut many kinds of vegetables.

A PENNY SAVED IS A PENNY EARNED.

A Few Grains of Common Sense.

In these hard times we need to economize in our food, not by going without, but by seeing that we have enough, and not too much, that it is healthy and nutritious, and that none of it is wasted.

If you buy a porterhouse steak, you have a long fag end to give to the cat. If you buy a sirloin, you have a small piece that is tender and juicy, and a large piece that is tough, stringy and dry.

If you buy a round steak you need a remarkably good butcher or remarkably good teeth.

If you have a Triumph Meat Cutter, you do not need to worry because you cannot get a steak that just suits you. Whatever you get, run it through the meat cutter and make it into flat cakes. You can then broil it, which is best, or fry it, which some people do. Besides if cut, it can be seasoned all through; all parts are thoroughly mixed, the juicy parts flavor the dry parts, and the whole is both delicious and nutritious. Moreover, to cut it fine aids digestion. Beef is one of the most nutritious of all meats, and with the exception of mutton and venison the most readily digested, if chewed fine. If swallowed in umps, digestion is retarded.

What we claim for the Triumph Meat Cutter is that with it you can cut your meat thoroughly. No strings, no bits of muscle, not even bits of bone are found in its product. If you want your beef in small pieces, run it through once; if still finer, twice. For Hamburg steak it cannot be chopped too fine.

We have no word to say against other meat cutters. They have a broad field, and all have their good points; but we do say that for family use, the Triumph cutter has never yet been equaled. It has no complicated machinery to adjust, no difficult parts to wash. Any servant girl can be taught to put it together and to use it in two minutes.

For those who cannot afford to buy the better grades of steak it is invaluable. Any piece of beef after going through this meat cutter can be made into good steak by making it into a flat cake. We do not say that a neck piece will be made as nice and juicy as porterhouse, but we do say that it can be made both palatable and digestible.

Some people reject meat cutters because they do not make good hash. It is true that no meat chopping machine will leave boiled potato in pieces. If you want it that way the old fashioned chopping knife, with all the time and trouble it takes to use it is your best recourse. But for mince pies, Hamburg steak, croquettes, and many other dishes of the kind, nothing can equal a meat cutter, and no cutter can equal the Triumph.

Until your dealer learns its value and carries it in stock, write to

THE PECK, STOW & WILCOX CO., Southington, Conn., or New York.

Who will deliver it any where in the United States, express prepaid, for $1.75. Your Hardware dealer should sell it to you at the same price.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate.

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be **the very best.**

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made **Smokeless Schultze Powder** famous all over the world, while its **hard flinty grain** and specially regulated moisture makes loading so easy that any amateur can now do so successfully

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U.S. Agents

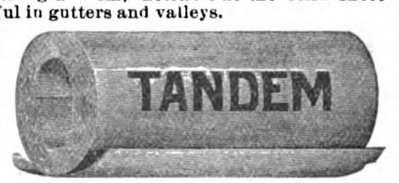
Continuous Roofing Tin.

CONSIDER EVERYTHING and see if you don't find it cheaper and better to use "TANDEM" than to use any other equal grade of roofing



It is easier to lay than ordinary roofing and it makes a better roof.

Our "TANDEM" is made in sheets 20 and 28 inches wide and 96 inches long. The seams are locked together, end to end, making a straight continuous course containing 100 square feet. The seams are soaked on both sides during the coating process, and are as strong and impenetrable as the solid sheet Such courses are particularly useful in gutters and valleys.

It is ready to use the moment you unroll it. No re squaring, no trouble, no lost time, no waste tin. Every inch of it goes directly on the roof in absolutely straight courses.

It affords a saving of labor and solder. A square of it will cover more roof than a square of 20x28 loose sheets. These are the reasons why every roofer should use it.

There are other points worth considering: (1) While all the plates are full weight (I C thickness), the shipping weight of a square of "TANDEM" is less than that the same quantity of 20x28 sheets. (2) We can ship direct to where the goods are to be used. If you're working away from home this saves freight charges double handling, and time If you care to know more about "TANDEM" CONTINUOUS ROOFING TIN write us. Prompt shipments can now be made.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

A QUESTION. Why do all Sportsmen prefer

EUREKA GUN IMPLEMENTS?

THE ANSWER

Is because the No. 0 Closer gives a square crimp; the No. 95 Cleaning Rod is made just the right weight and length for all guns; the Powder Measure No 20R is standard for all grades of powder and the complete line is **UP TO DATE.**

Just added a comp'ete set of Cleaning T. ols to our Eureka Line No. 164, containing No. 95 Cleaning Rod, Flannel Wiper, Steel Wire Scratch Brush, Bristle Brush, Bottle of Oil, Tube of Paravaseline, Oil Can and Screwdriver. $1.25 per set.

MERK CHRISTMAS TREE HOLDER!

PATENTED SEPTEMBER1st, 1891.

BUY THE BEST!

Christmas Comes But Once a Year.

If you want to make your home pleasant and cheerful during the holidays BUY A MERK CHRISTMAS TREE HOLDER, made of iron, neatly finished in gold bronze, a great improvement over any heretofore made. By an ingenious contrivance the tree is held secure by strong arms which extend upward from the main body of the receptacle in which it is placed. If desired the tree can be revolved. Sample tree holders sent by express prepaid upon receipt of **$1.** Packed in quarter and half dozen crates for shipment. Manufactured and sold only by the **ALLENTOWN HARDWARE WORKS,** ALLENTOWN, PA.

☞ SOMETHING NEW. Hardware dealers and others are requested to write for descriptive circulars and wholesale prices.

A Perfect Shelf Bracket

—MADE OF—

WROUGHT STEEL.

Light! Strong! Elegant!

PATENTED.

As a result of long and careful study and much experimenting we are able to offer the trade a

STEEL SHELF BRACKET

which is far superior to anything of the kind heretofore produced, and which we believe to be a

PERFECT ARTICLE!

We base our faith in these assertions on the following points of

SUPERIORITY:

1.—The use of the **arched** or **angle** forms of steel in the wall and shelf plates, which gives **much more strength** with less metal than if made flat.

2.—The **Corrugation** of the brace, which renders it secure against buckling or bending sideways under the severest strain.

The application of these principles makes a **Light, but very Strong Bracket.**

The Coming Sportsmen's Exposition.

The First Sportsmen's Exposition, under the auspices of the Sportsmen's Exposition Association, which will be held in Madison Square Garden, New York, from Monday, May 13th, to Saturday, May 18, 1895, is one of peculiar interest to all connected with the Hardware trade. For some time past the retail Hardwareman has been extending his line in sporting goods, and as he has gathered experience, he has found to his abundant satisfaction that the profits have been far larger than in the old staples which have been his standby for time out of mind. The new field is a broad one, as will be seen by the list of classes published on another page of this issue, and comprises every variety of goods used for pleasure.

In connection with this subject surprise has been created in the trade that in the severe depression through which we have passed in the two years gone, the demand for sporting goods has never abated; on the contrary, it has, in a great many directions, fairly increased. That the scope of goods to be carried can be extended, a casual reference to the list of goods to be exhibited, will prove to the most conservative dealer, and show him that the field has hardly been scratched over.

An interesting feature of the exhibition will be in the historical department. In that there will be old firearms, Kentucky rifles, flintlocks of Revolutionary times, punt guns, spears, arrows, and so on indefinitely.

On another page of the present issue of HARDWARE can be found an illustration of the spaces that will be devoted to the different trades and parties intending to exhibit. An examination of this plat will be interesting. All in all, the care and enthusiasm exhibited by the able men having the Exposition in charge, who are working might and main, promise a result of the utmost importance to those already in the trade, and incidentally to those who may later on add one line after another in this direction to their stock of staple Hardware.

A Tendency in Hardware.

The business in builders' Hardware seems to be dividing itself in two directions, one a tendency to excellence, and the other the cheapest sort that can be found. In the latter case the work is generally done by contract, and naturally there is a disposition to economize in everything, and the manufacturer finds himself bending every energy to meet a demand for metal goods, which he knows are of little value except in a temporary way. The idea seems to be to make as much show as possible out of a little money, without regard to quality. To this end the goods are stamped out in quantities, and prices are constantly receding. In the better class of goods, prices are not advancing, the decline in the value of the raw material and to some extent in wages of employees, counterbalancing the increased cost of quality. The point is, however, that the dividing line between excellent and cheap builders' Hardware is becoming more pronounced all the time, and that when the cupidity of the average contractor shall be overcome, the probable tendency will be in the direction of the better class of goods.

The new conditions under which the service for the navigation of the Amazon and its affluents is to be conducted, will be of interest to commercial men in this country interested in the rubber trade. To the existing lines from Para to Manaos and Iquitos, the latter place being on the frontier of Peru, and those of the rivers Purus, Madeiro, Negro, etc., the Brazilian Government has added

Digitized by Google

a new line from Para to Oyapock, touching at Macapa, Bailique, Araguary and Amapa, situated on the coast of the disputed Franco Brazilian territory. The steamers destined for this service are required to be constructed upon the most modern models, with a speed of twelve English miles, a frigorific chamber, and to be capable of carrying two hundred to five hundred tons of merchandise, fifty first-class passengers, and two hundred second-class, with a reduction of fifty per cent. in the tariff of rates on both goods and passengers.

Thirty-five years ago the price list and catalogue was little known in the Hardware trade, and the pioneer books in that line were guarded with a great deal of care and caution. They were securely locked in the office safe each night, and were always under the supervision of the proprietor. In those days nine-tenths of the Hardware used in this country was imported, and prices were sometimes fixed so as to include enormous profits. At the present time, the reverse seems to be the fact, home competition among domestic manufacturers having worked a revolution in that respect.

In the matter of cheap firearms and appurtenances for the South American trade, Belgium at the moment seems to defy all competition. Germany, however, is taking steps to obtain a share of this business, which has now obtained considerable proportions, and is constantly growing. The Belgians are very progressive in every direction, having recently laid down in Halifax, N. S., steel rails at the phenomenally low price of twenty dollars per ton.

While a ton of steel rails has been laid down recently in Halifax from Belgium, at the low price of twenty dollars, a ton of Harveyized Armor plate costs six hundred dollars. The high price of the latter is in a considerable degree owing to the scarcity of skilled labor, and again to the enormous capital required for the plant. Both labor and capital may be idle for years, as the United States Government is the only apparent customer, and everything is dependent upon the appropriations of Congress.

Two ambitious young men have appeared in the Hardware trade in New York City. One, the son of Fred'k Pfeifer, of the Payson Mfg. Co., of Chicago, opened his eyes, November 15th, and the other, the son of H. J. Brainerd, followed his example November 19th. At the moment both youngsters are very noisy, and causing a great deal of pleasant trouble.

The Kearney & Foot Co., New York, Paterson, N. J., and Tacony, Pa., are gradually increasing their production, having lately added one day to their working hours at Paterson. At that place four hundred men are employed, and the addition of one day's labor in a week is quite a factor.

The Allerton Lubricant Co., Chicago, Ill., have recently been incorporated with a capital of $3 000,000. Their works are at Grand Crossing, Chicago. The Allerton Clarke Co., of No. 83 Reade Street, New York, and No. 23 Lake Street, Chicago, are sole agents for the company.

The Christmas trade in table cutlery appears to have opened in very fair shape, the demand being up to the volume of past years. Prices, however, are low, and the complaint of small profits is quite general in the trade.

Hon. John H. Graham, of John H. Graham & Co., New York, is at present in Washington, the climate there being better adapted to the full recovery of his health, which is progressing now, after his long illness, in a gratifying manner.

Hardware Club Notes.

There are inquiries being made in the trade as to when the next annual Hardware dinner is to be given. It will be remembered that that of 1894 was omitted because of the financial depression of the country, it being suggested by those who had the matter in charge, that it would be more fitting that each should contribute whatever he felt in the way of spending for luxuries, to the needs of those who were out of employment about him. Now that good times have returned, it is the anxious desire that the dinner of 1895 shall be of the old-time character and importance. Probably it will be given in February or perhaps the month preceding, but the definite arrangements have not yet been made.

At a recent meeting of the board of governors of the Hardware Club, the following gentlemen were unanimously elected to membership:

Samuel R. Beardsley, No. 179 West Street.
Alfred B. Chapman, No. 62 Worth Street.
H. E. Deats, Flemington, N. J.
Ralph W. Grout; Henry W. Peabody & Co.
E. H. Kidder, No. 253 Broadway.
Charles H. Lester, No. 48 Barclay Street.
John Henry McCarthy, Justice City Court.
Edward M. May; H. L. Judd & Co.
Walter P. Phillips, General Manager United Press.
Henry W. Putnam, Jr., No. 108 Chambers Street.
Alfred H. Smith, No. 131 Duane Street.
George F. Spinney, Publisher New York *Times*.
Francis M. Underhill, No. 46 Barclay Street.

We are pleased to state the gratifying fact that the present membership of the Hardware Club is 492, of whom 416 are resident members, and 76 non-resident. Add to these the sixteen names now posted for admission, and we have a total of over 500—and the Club has been in its new quarters for less than six months!

The "Loaded Shell" Trade.

HARDWARE, a journal devoted to the Hardware business, calls attention to a peculiar feature of the "loaded shell trade" during the present season. A war among the Southern railways resulted in low freight rates, and Southern dealers took advantage of the opportunity to increase their orders for cartridges. To meet this demand the factories had to run overtime, but the strain of fifteen hours' work a day proved too severe for the operatives and they had to return to the old hours, "with the embarrassment, however, in some large factories that they are five and six millions of cartridges behind on orders that they have booked." This exceptional demand for cartridges in the South in the "bloody shirt" period would probably have been construed as an evidence of latent treason. Now it simply indicates the abundance of partridges, rabbits and other small deer in the South, and illustrates the promptness with which business men take advantage of every opportunity of lessening their freight bills.—*Baltimore Sun.*

Lowry Hardware Co., Atlanta, Ga., Hardware, Cutlery, Bicycles. HARDWARE Publishing Co.: We enclose herewith our order for subscription to your journal which we wish to begin with the number containing the first of "Six Letters to a Clerk." We regard each of these letters as worth the price of a year's subscription.

Sam Haines, the friend of every Hardwareman, has been spending a few days in New York. He is, as usual, very much interested in lawn mowers, bicycles and everything else that is good for the trade.

The Reading Hardware Co., Reading, Pa., and New York, report a gratifying increase in the demand for their lines of goods, and that their factories in Pennsylvania are fairly busy.

The Rome Brass & Copper Co., Rome, N. Y., have completed a two-story addition to their large mill. The company employ about three hundred hands.

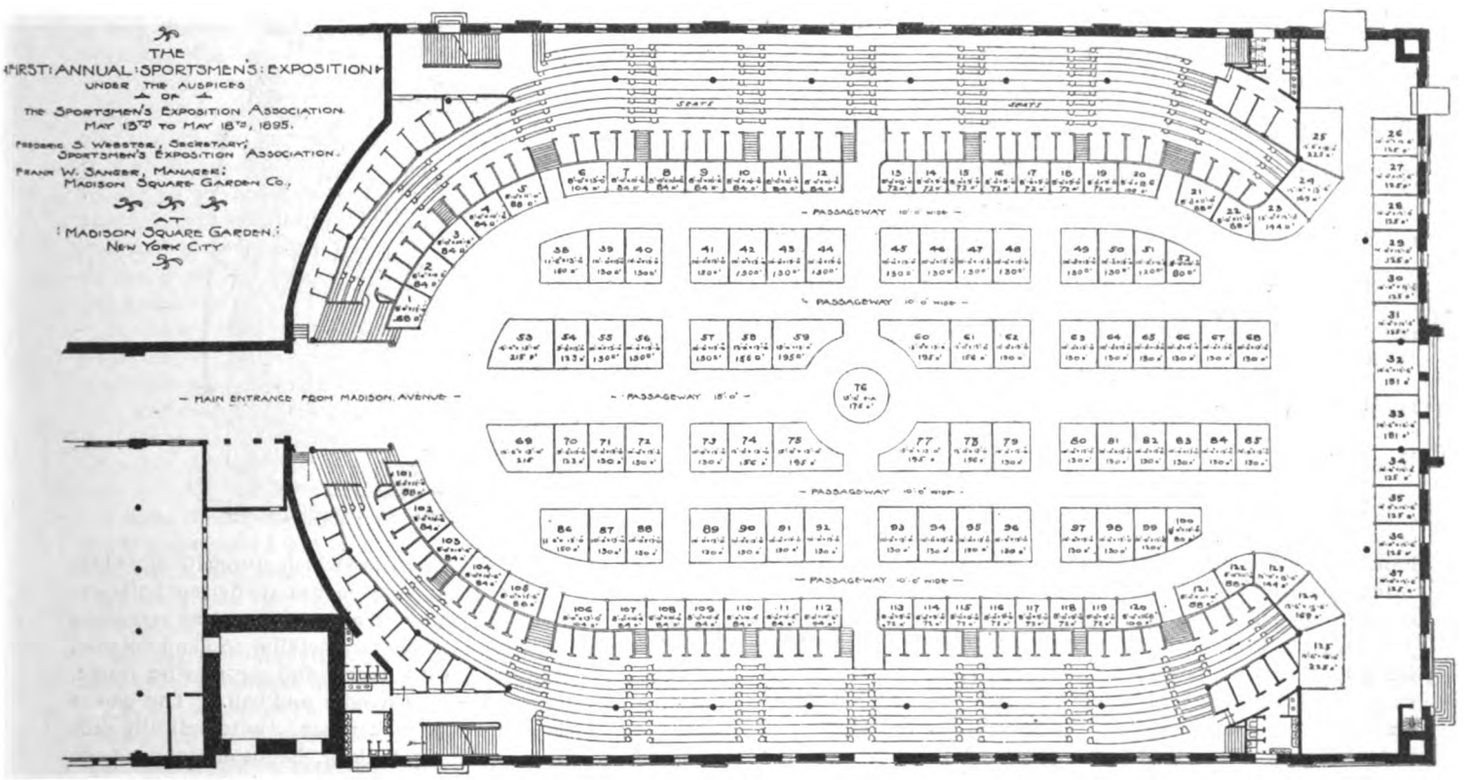
First Sportsmen's Exposition.

THE GREAT EVENT OF MAY, 1895.—A STATEMENT OF CLASSES, ETC., MADE BY THE DIRECTORS.



The directors of the First Sportsmen's Exposition, to be held at Madison Square Garden, New York, from Monday, May 13th, to Saturday, May 18, 1895, have issued a handsomely finished prospectus outlining the plans and purposes of the exposition, and also a statement which explains those purposes in detail. "When the scheme was first taking shape," they say, "there was a probability of its being merely a trades display, but after a careful and full canvass of the situation by the committee, and much deliberation, it was expanded into an Exposition, with its scope extended, so as to cover the realm of the sportsman in every essential detail, and what might have been but a limited epitome of the subject was broadened into a comprehensive plan, which would specifically illustrate the evolution and growth of all that pertains to the life and pursuits of the sportsman; in every sense a Sportsmen's Exposition. The directors recognized the importance of having the enterprise embody every feature, which would place the Exposition on an educational, practical and profitable basis. This was considered fundamental. In this event the affair would assume a dignity and importance not to be questioned. That this has been practically accomplished, is evidenced by the prompt co-operation of everyone who has been approached on the subject. The universal interest manifested on all sides in the undertaking, and the unanimity of good-will accorded is encouraging and inspiring.

"The directors have laid out the plans accordingly, feeling convinced that the First Sportsmen's Exposition will be an assured success. It is to be made attractive and interesting, and every means devised to draw the public, whether amateur or professional. The practical advantages to accrue to the exhibitor will be much more surely attained by invading the ranks of the novice and the amateur by the educational aad historical features than by any other means, and this has been fully provided for."

The board then calls attention to the several branches, fourteen in number, which define the general character of the undertaking, but which will admit only of a brief mention, as follows:

Class A—Firearms of every description, ancient and modern.
" B—Ammunition.
" C—Sporting Sundries and Appliances.
" D—Fishing Tackle.
" E—Boats, Canoes, etc.
Class F—Camping Outfits and Utensils.
" G—Athletic Goods (lawn tennis, field games, etc.)
" H—Zoology, Taxidermy and Taxidermist's Supplies.
" I—Kennel Supplies.
" K—Cameras and Photographist's Supplies.
" L—Saddles, Bridles and Horse Equipments.
" M—Sportsmen's Art and Literature.
" N—Trophies of the Chase.
" O—Loan Exhibits.

In further statement, the directors say: "In submitting the foregoing to the sportsmen of the world, it will readily appear how necessary it is for all to contribute something in the historical line in order to have the Exposition represent what is intended. Every article which will illustrate the various exhibits is desired. A synopsis of the material needed for this purpose will be printed and circulated later. We believe no one will hesitate to offer such specimens and objects as they may be fortunate enough to possess, no matter how insignificant or valuable. All loans, whatever their nature, which are donated, will be guarded and carefully arranged in systematic order and properly labelled with the name of the exhibitor. The management wishes to carry out to the letter the object of the Exposition, and in order to accomplish it, must depend on the sportsmen of the world for general co-operation and assistance.

The Committee of Measurements and Records is composed of well-known gentlemen, who have kindly consented to serve the Exposition: Hon. Theodore Roosevelt, Archibald Rogers, George Bird Grinnell."

New York Jobbers' Association.

The New York State Association of Hardware Jobbers held a session in Troy, New York, on November 14th. The trade was discussed in all its aspects. The officers are: President, Irving D. Booth, Elmira; vice-president, Hobart Weed, Buffalo; secretary and treasurer, S. J. Weaver, Rochester. In the afternoon the members and a number of invited guests were given a dinner at the Troy Club by J. M. Warren & Co. Those present were John Don, Wm. Henry Warren, H. S. Darby, F. H. Leeds, F. W. Edmunds, E. L. Rowe, John M. Francis and C. Whitney Tillinghast, of Troy; Charles H. Turner and Wm. B. Wackerhagen, of Albany; Mr. Shoemaker, of Elmira; H. L. Kennedy and J. W. Black, of Syracuse; Cyrus M. Ward, of Albany; Fred. Barker and Irving D. Booth, of Elmira; J. H. Brewster and S. J. Weaver, of Rochester; Hobart Weed and E. C. Weed, of Buffalo, and C. E. Walbrage and Mr. Babcock, of Binghamton.

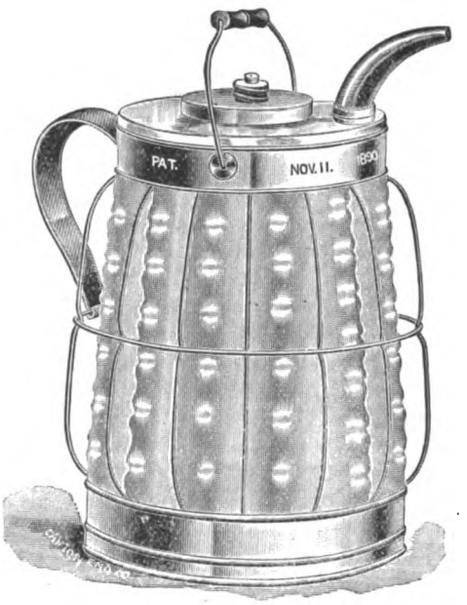
Meeting of the Philadelphia Hardwaremen.

There was a pleasant meeting of the Hardwaremen in Philadelphia on the evening of Tuesday, November 20th. It was the regular business gathering of the Hardware Merchants' & Manufacturers' Association, for which extensive arrangements had been made, and an order of exercises prepared as follows:

6 P. M. BUSINESS MEETING.
7 " COLLATION.
8 " REASSEMBLING.

1. Introduction of Presiding Officer, - Mr. Wm. W. Supplee. By Mr. Hugh McCaffrey.
2. TENOR SOLO, - - - - - "*The Love of Old.*" Mr. Chas. A. Huff.
3. DISCUSSION, "*Is the system of Syndicate Buying of advantage to the Trade in general?*"

Affirmative.	Negative.
Mr. Hugh McCaffrey.	Mr. Jas. H Ritter.
Mr. Jas. S. Bonbright.	Mr. Geo. C. Coffan.
Mr. Elmer E. Brown.	Mr. Jas. H. Jacoby.



4. BARITONE SOLO, selected, Mr. Paul A. Griffith.
5. MUSINGS, "*A Summer Abroad; what did I learn of benefit to fellow laborers.*" Mr. Wm. C. Peters.
6. RECITATION, - - - - - "*The Maniac.*" Mr. Wm. W. Supplee.
7. BASS SOLO, selected, Mr. John R. Griffith.
8. RECOLLECTIONS, - - *Fifty Years a Hardwareman.* Mr. Wm. H. Allen.
9. ORATION, "*Spartacus to the Gladiators,*" *or* "*Me to my Competitors.*" Mr. T. James Fernley.
10. TENOR SOLO, - - - "*Queen of the Earth.*" Mr. Chas. A. Huff.
11. RECITATION, - - "*Reminiscences of a Stump Speaker.*" Mr. Harry M. Einwechter.
12. REMARKS, Mr. Frank H. Taylor.
13. REMARKS, - - - - - "*Our City Beautiful.*" Mr. Jas. H. Ritter.
14. REMARKS, - - - - "*Dining as a Fine Art.*" Mr. Alfred C. Rex.
15. SONG, - - - - - "*Who's that Laughing?*" Mr. T. James Fernley.

It is needless to say that the occasion was one of great interest and pleasure to all concerned. The discussion upon the important question, "Is the System of Syndicate Buying of Advantage to the Trade in General?" could hardly be called a debate. As one gentleman expresses it: "The members appointed to talk on the affirmative or in favor of syndicate buying talked in the opposite way, and the negative were practically left without even an apology." A vote was taken which was almost unanimous against the system. In the absence of one of the gentlemen who was to speak on the negative side, James D. Foot, of Kearney & Foot, New York, made some remarks in which he endorsed the speeches of the preceding speakers. The other papers and addresses were first-class, and it is needless to say that the evening was one of rare enjoyment to all concerned.

Some sixty-five gentlemen were present, including the guests, among whom may be mentioned W. T. Norton, of the American Axe & Tool Co.; E. B. Pike and E. Bertram Pike, of the Pike Mfg. Co.; William A. and Geo. H. Graham, of John H. Graham & Co., and, as has already been mentioned, James D. Foot. While any mention of the different features of the programme may be an invidious distinction, it may, perhaps, be said that the remarks of James H. Ritter were acknowledged by all to be of a very high character from a literary standpoint. A. C. Rex astonished his most ardent friends, while President William W. Supplee recited "The Maniac" in so vivid a manner that one member from New York left the room at the conclusion of the recitation, and asked to be shown to the convalescent ward, declaring that to his mind the banquet room was simply a mad-house. (This suggestion must be accompanied by a statement of the fact that no wines whatever had been served) William C. Peters' "Musings on a Summer Abroad" elicited the heartiest applause. The "recollections" of William H. Allen, who has been in business activity for fifty-one years, were presented in a manner that won the appreciation of all. John R. Griffith and his son Paul, were pronounced musicians of unusual attainments, while the tenor solos of Charles A. Huff, of the Supplee Hardware Co., were rendered in a manner enjoyed by all present. It is needless to say that President William W. Supplee and T. James Fernley, the efficient secretary of the Association, were prepared at all points to do everything in their power to make the occasion one of pleasure and interest to those present.

Crystal Oil and Gasoline Can.

The Star Mfg. Co., Canton, Ohio, are meeting with renewed success with their specialties. The company's chief specialty is an article described as "of the highest merit and in universal demand, and being far in advance of anything of the kind heretofore placed upon the market; its success has been phenomenal from the beginning. The Crystal Valve Oil and Gasoline Can is as its name implies, a crystal glass can for containing oil or gasoline. Its special novel features are the valves, which consist of two small glass balls, one each in the

vent at the top and in the spout, and which automatically close these openings when the can is not in use, rendering both air-tight. The body of the can is a fine crystal glass reservoir, which is protected with a substantial metallic top and bottom, the whole bound together with a neat and strong wire frame, and supplied with a convenient handle and bail." The can is convenient in use, and, as the makers say, "automatically self-closing, non-explosive, air-tight, clean, handsome and cheap, and is the best selling oil can on the market." Write them for full particulars.

Hardware clubs appear to flourish vigorously on every soil but British, and here, we are told, there is no hope for anything of the kind. The New York Hardware Club is growing so rapidly that it is predicted the limit of membership will soon be reached. Nearly 200 members of the trade have joined it in the last few months and it has come to be regarded as a necessity. As a headquarters for the trade, a common ground for the exchange of greetings and comparing notes, and a home for Hardwaremen visiting the city from other sections of the country and from abroad, its facilities are highly appreciated. Another flourishing club has been formed by the Hardwaremen of Switzerland, with headquarters at Zurich.—*Hardwareman* (*London, Eng.*)

Little Coon, an intelligent colored Hardware merchant in New Orleans, has made application to have his name legally changed. He is six feet high, weighs 220 pounds and says that his name makes people laugh the moment they see him.

"Anything new in your line?" asked the market reporter. It was growing dark. The Hardwareman looked about absently and then remarked: "Window blinds are going down."

Porter to Partnership.—I.

THE PROGRESS OF A CLERK WHO WAS NOT AFRAID OF WORK.

I began my business career in a country store; I am inclined to think that it is a good place for a boy to start in. We kept groceries, dry goods, a small line of Hardware, boots and shoes, some drugs and a miscellaneous collection of stuff that didn't come under any head. We bought everything that the farmers had to sell, from axehelves to hides. It had long been my ambition to be a clerk. Whatever my opinion may be now, in those days I would rather stand behind a counter and sell goods than be President of the United States.

I was fifteen years old, and had been through the common rudiments of a country school; that is, I had a very fair knowledge of arithmetic, grammar and geography. The trustees of the school were men who believed the end and aim of all knowledge were to be found in the three Rs—Reading, 'Riting and 'Rithmetic. And when I compare the boy of fifteen today in the elaborate city schools, with myself and my companions at the same age, I am not sure but that the old men's ideas were very nearly correct. Our school system of to-day is founded on the idea that every boy and girl is going through college, and instead of fitting them for life work they are merely trained to pass a college examination. Under this plan a boy studies much that never benefits him, while the main branches that are needed in practical life are overlooked. I saw a lad of ten studying botany the other day, and he was prepared to roll off his tongue's end everything about stamens and pistils; but he could not tell me what 3¼ times 50 were, though I gave him pencil and paper and half an hour to do it in. If all our children were going through college I presume the present system is the best, but as over 95 per cent. of our boys are compelled to turn to work by the time they are fifteen or sixteen years old, I am not sure but that I prefer the old-fashioned country school.

It was my duty to open the store in the morning, sweep and dust, carry parcels and make myself generally useful, but it was some time before I was allowed to sell goods. I remember that the cost-mark was a wonderful thing to me, as Mr. Ely gave it to me in this form:

We must go in.
1 2 3 4 5 6 7 8 9 0

I went through the store looking at everything and examining the cost, and I was astonished at the difference between the cost and selling price. If I had ever thought of it before it was that the goods were sold for about all profit, and that the cost was a trifle.

Mr. Ely was an energetic man; at the store early himself, he was never a moment idle until he went home at eight or nine o'clock. The town's trade came from two classes—factory people and the farmers, and was done almost entirely on credit. The factory hands were trusted from pay-day to pay-day, the farmers took credit till they had something to turn in by way of pay.

The first lesson taught me was to keep the store clean. Mr. Ely did not scold, but one morning when I had skimmed over the floor without sweeping it clean, he quietly took the broom and swept it after me. I did not need a second lesson. Our windows were washed once a week and show-cases polished and our scoops and furniture cleaned every Friday. The store went like clockwork; Harry, the older clerk, was obliged to go through the dry goods and notion side of the store the last thing every night before closing up, and arrange each box and bundle in its own place, while I did the same on the grocery side.

The best lesson I had in politeness was the knowledge that my predecessor lost his place because Mr. Ely heard him answer an old lady rather impertinently, though it was difficult to keep from putting on a few airs when my old cronies came in the store. Though when I had to load or unload hides I did not feel quite so much elevated above the rest of the world.

As in every other place, competition was very brisk. There were two other general stores in the place and several whiskey groceries. Printers' ink was not so available as it is to-day, nor so cheap. Our principal advertising was done by piling up goods before the store, and as I showed some skill in arranging these goods the work of doing this was turned over to me.

As I became familiar with the stock I was allowed to wait on customers, and as I was fully determined to please, I think I did make myself popular. There was every reason why I should try with all my might and main to make a mark. I had no influential friends to push me along, all that I made of life must be made by myself, and I was determined that I would work my way up.

I think I had a quick eye for noting anything out of the way, and as all my interest was in the store, I saw many things that escaped the other clerk; whether Mr. Ely saw what I did, I knew not, but I kept pegging away as well as I could, determined that if he did not praise he should have no reason to complain.

At the end of the year he called me behind the desk, however, and made me a present of a ten-dollar bill, saying: "You are doing very well, Mark; if you keep on as you have begun you will one day have a store of your own." I went home a happy boy that night and fully determined to do better than ever the coming year.

The Clerk and the Cartridge.

Levi Noland, a clerk in Mellor Bros.' Hardware store, Boone, Iowa, wanted a small ferrule to place on some tool with which he was working. Looking through the show-cases he discovered a small shell about an inch long and in diameter about equal to a .22 calibre cartridge. There was no ball in the thing and he didn't know just what it had been designed for. He knew, however, that by sawing off the head on the closed end it would suit his purpose exactly. He therefore placed the little shell firmly in a vice and commenced operations with a small hack saw. He was progressing nicely, when suddenly there was a flash and a report. Noland's hat was blown into the air; blood began to ooze from several places in his face and he felt positive that something had struck him. It was then discovered that the harmless looking little shell was a dynamite cartridge and was prepared for business. A doctor picked pieces of cartridge and saw out of the various places in the young man's face. Luckily none of the flying particles struck the eyes and the injuries received were only slight. The cartridges are used for various blasting purposes and are very powerful. There are several of the cartridges left, but the box is now properly labeled "dynamite."

Aluminum by the Car Load.

Word comes from Topeka, Kan., that "one of the largest manufacturing establishments in the State will soon be converted into an aluminum factory. English capitalists invested largely in a smelting plant at Turner, in Wyandotte County. It was completed about the time the Barings failed, and the necessary operating capital which had been promised the projectors of the mammoth enterprise was not furnished. Without funds to start the furnaces and to lay in the sixty-day supply of ore necessary for a profitable blast, the enterprise was never started up. Since that time the silver agitation and the general uncertainty of values have rendered it impossible to secure the financial aid necessary. During the past four months a party of gentlemen have been using a portion of this smelting plant in extensive experiments with a new process of extracting aluminum from clay. They have been so successful as to warrant the leasing of the plant, and it will soon be used for the production of that quality of aluminum which is used extensively in the manufacture of lard. It is reported that large contracts have been made with packing houses in Chicago and Kansas City for this product, several carloads to be delivered daily."

The word "Boss," so commonly applied by an inferior to one of higher grade in the United States, is not, as generally supposed, American in its origin. It comes from the Low German, and is heard frequently in Continental Europe. In Germany one often sees the sign "Schlaf-Baas," which translated means the Boss of a lodging house.

The Great Tri-City.

AN ANSWER TO THE QUESTION: "WHERE IS DAVENPORT?" —A LETTER FILLED WITH VALUABLE INFORMATION.

EDITOR HARDWARE: Once while talking in a convention of barb wire manufacturers and Hardware jobbers, in Chicago, a gentleman asked: "Where is this Davenport that the speaker represents?"

In making up trade reports, recollecting the question, it has occurred to me that your readers might have also desired to know where this city is located and something of its history, industries, and important business features.

Commercially speaking, Davenport, Iowa, Rock Island, and Moline, Ill., are one city, known as the Tri-City, all connected by free government bridges, electrically lighted; and in this letter without further explanation, it will be understood that all are included in whatever may be stated.

Located on the Mississippi River, at the foot of the upper rapids, midway between St. Paul and St. Louis, settled by Christian people about 1830—the Christians having driven from their home here, the Indians, who had occupied the place for more than a century--and whose population in 1832 numbered forty thousand. Forty years elapsed before the population of whites reached that number, and we claim only ninety thousand to-day. Here the waters of Lake Michigan will soon be connected with those of the Mississippi through the Illinois and Mississippi Canal, better known perhaps as the Hennepin, which will give us direct water transportation through the lakes to the sea. The Chicago, Milwaukee & St. Paul, Chicago, Burlington & Quincy, Chicago, Rock Island & Pacific, Burlington, Cedar Rapids & Northern, Rock Island & Peoria, and the Burlington & Northern Railways are here.

The first bridge spanning the Mississippi was at this point. The first railroad iron in Iowa was laid here, where the first locomotive was used, crossing the river on the ice. We have almost unlimited water-power, and are in the centre of the bituminous coal fields of Iowa and Illinois.

The Rock Island Arsenal, occupying the entire island, containing one thousand acres, is the principal and largest arsenal in the United States, if not in the world, erected at an expense of about thirteen million dollars, employing hundreds of men in its shops, and could, in case of necessity, give employment to twenty thousand skilled workmen.

As a manufacturing centre we produce annually three and a half million plows and cultivators, three hundred thousand wagons and buggies, not to mention the vast number of corn planters, hay loaders, grain elevator and flouring mill appliances, metal wheels, steel axes, harrows, pumps, and other farming tools and machines, which find a market in every country on the globe. We also manufacture stoves, sash, doors and blinds, woolen goods, pipe organs, saddlery hardware, furniture, scales, scissors and shears, carpet looms, paper pails, brick tile, etc., etc. We grind five thousand bushels of wheat per day into favorite brands of flour; consume five thousand bushels of corn daily in our glucose works, producing excellent preserving syrup, which may be contributory to the volume of granulated sugar, and even maple syrup. Two hundred million feet, representing three and one-quarter million dollars of pine lumber, are manufactured annually from logs rafted from northern pineries. Cigar manufacturing is a large item among our industries, employing from six hundred to one thousand operatives.

In addition to three million gallons of water, pumped daily from the river, through a million and a half dollar water plant, and a hundred and fifty thousand dollar filter, we have beer manufactured by seven large breweries to slake our thirst, have twenty five miles of brick-paved streets, and fifty miles electric street railway. Our schools, secular and theological, are unsurpassed. This is the See City of Iowa for the Episcopal and Catholic Churches, both having beautiful cathedrals.

Davenport is the Iowa money centre; the bank deposits averaging about ten million dollars. The First National Bank opened its doors June 28th, 1863, and was therefore the first National Bank in operation in the United States. Austin Corbin, now of New York, was its promoter and first president. In this connection, it is a fact but little known that the Iowa Banking Law of 1858 embraced substantially the banking features of our present National banking system.

Our city has contributed to New York such distinguished citizens as Austin Corbin, Judge John F Dillon, James Armstrong, Judge George M. Van Hoesen, W. C. Brewster, Alfred Sully, J. D. Campbell and A. F. Richardson; also Robert Sickels, so well known to the New York Hardware trade, and many others. Octave Thanet (Alice French), Bishop Perry, Rev. H. N. Powers, D. N. Richardson, Lillian Blanche Fearing, Nelson Hurst, of the New York *Times*, Chas. J. Powers, of the Chicago *Tribune*, Charles Russell, of the New York *Herald*, are among Davenport's literary people. R. R. Cable, president of the Rock Island Road; General Flagler, Chief of Ordnance, U S A., and Colonel W. F. Cody, familiarly known as "Buffalo Bill," have lived here.

The Ceylon Importing Company, two of its officers being natives of that far away island, has recently been established here, with a branch office and warehouse in New York, and has for its president—excuse modesty, J. R. NUTTING.

Davenport, Nov. 15, 1894.

Yale & Towne Mfg. Co. Changes.

Under date of November 5th, the Yale & Towne Mfg. Co., Stamford, Conn., and New York, make the following announcement of changes:

To the Hardware Trade; We beg to announce that on and after November 19th, our General Offices will be located on the second floor of the Stewart office building, No. 280 Broadway, New York, at the corner of Chambers Street, in the centre of the "Hardware district," and within a few doors of our New York salesrooms at Nos. 84-86 Chambers Street. We take pleasure also in advising you that at a recent meeting of the directors of this company Mr William F. Donovan, the present general manager, was elected also to the position of vice-president. The management of the new general offices at No. 280 Broadway, New York, will be under the immediate direction of the vice-president, whose headquarters will hereafter be at that point. Our New York branch house and salesroom, under the charge of our assistant treasurer, Mr. Thomas F. Keating, will be continued at Nos. 84-86 Chambers Street, and the business of that office will be conducted in all respects as heretofore. Our other branch houses and salesrooms in Chicago, Philadelphia, Boston, Pittsburg and San Francisco will also be continued without change, and will each constitute the point of distribution and correspondence for the business within its territory.

The direction of the manufacturing and financial affairs of the company, including the management of its plants at Stamford and Branford, will continue to be conducted from the executive offices in Stamford. Respectfully,

THE YALE & TOWNE MFG. CO.,
By HENRY R. TOWNE, President.

Stamford, Conn., November 5, 1894.

W. E. & John Woodwell, No. 632 Smithfield Street, Pittsburg, Pa., who handle a general line of Hardware, as well as novelties, and who are making a leader of photographic supplies for the holiday trade, report business rapidly improving. They are having their full share of the trade.

A combined letter card with a case for silver coins made of muslin, the whole enclosed in a proper envelope, is a novelty lately brought out in England. The coins do not rattle in their enclosure and the device is the best in its line that has yet been invented.

The transmission of freight cars by electricity in the larger cities has proven a success on the Pacific Coast. It costs more to move freight in the large cities than passengers, when the opposite should be the case.

J. A. Digby & Co., McKee's Rocks, Pa., handle a general line of Hardware, guns and builders' supplies. They are a bright and enterprising firm, and well deserve the success they are meeting.

Merchant and Mercantile Agencies.

EDITOR HARDWARE: As too many merchants, principally to be found among the smaller ones, and those just starting in business, think that Mercantile Agencies exist merely for the object of ascertaining for them the liability of those who wish credit, I would submit some advice regarding themselves.

It is of the utmost importance that a merchant who expects to buy goods on credit, should place himself on record, so that parties with whom he wishes to open an account, can get the necessary information concerning his responsibility, on which to base a credit.

On commencing business, it is well to make a careful statement of your affairs, giving in detail the value of your resources in cash, notes goods, stock, real estate, or whatever you expect to put into the business; also a statement of whatever debts you may have. The difference represents your net capital. Send such statement to one or two of the established agencies, who will copy it faithfully on their records, and give it in confidence to their subscribers with whom you may want to open an account.

Should you neglect to make such a statement, or refuse to do it when requested by the agencies, you run the risk of having a statement go on record that does you great injustice either because it is made by parties not fully acquainted with your affairs, or, worse than that, possibly by some personal enemy. If your purposes are honorable, and you expect to pay for what you buy, you need not hesitate to make the statement alluded to, even if your capital is small. It is a mistaken notion entertained by some, that the Mercantile Agencies have an interest in misrepresenting people. On the contrary, they take great pains to have their reports as nearly correct as possible, and if a man is not rated correctly, it is usually due to his own stubbornness in refusing to give the necessary information. That statements of this kind, whether made to the agencies or to private enquirers, must be in accordance with the real facts, as nearly as can be ascertained, is a matter of course.

A deliberate over statement of the amount of capital invested, for the purpose of getting more than a fair share of credit, might lead to serious consequences, and make the party liable to prosecution for obtaining goods under false pretensions. Should the agencies not be in possession of correct information in regard to your affairs, and a house with whom you want to open an account call on you to make a statement, you should, if your record is clear and your intentions honest, unhesitatingly comply with the request, and give them all the information you can. The refusal to do so will make it appear as though you had something to conceal; and even if the order you may have given is filled, there is a lack of that feeling of confidence and good will that should prevail between buyer and seller.

R. W. HUMES.

"Jessop's" Steel for Sheep Shears.

The following, regarding the famous "Jessop's" steel, the product of Wm. Jessop & Sons, Ltd., Sheffield, Eng., and New York, appears in a recent contribution to the Sheffield *Daily Telegraph* from its Paris correspondent. In an article upon "The French Trade in Sheep Shears," the writer says: "Every order that comes from the United States is accompanied with the stipulation that the steel must be Jessop steel, and, in fact, nearly the whole of the shears sent abroad are made of this material. Where possible, makers will employ French steel, but this is only done from patriotic motives, as they have every advantage in employing Sheffield steel, and where quality is the point to be considered, no hesitation is felt in taking the material from Sheffield. While conversing with a maker of shears he mentioned having just placed an order with a native steel maker for 3000 tons of steel. 'But,' said he, 'where I buy 3000 tons of steel from France, I take 10,000 tons from Sheffield, and orders for still greater quantities of Jessop steel are given by other firms.' . . . It is very rare that a bar of French steel can be found that possesses a uniform quality its entire length, and the metal is consequently liable to break during the process of tempering. With English steel such accidents scarcely ever happen, with the result that, though Jessop steel costs £6 a ton more than the French steel delivered in Paris, the cost of the shears made therefrom is about the same, as the difference in the price of first material is compensated for in the absence of waste, to say nothing of the superiority of the shears. At the same time it is found that with Jessop steel, the shears can be made quicker and more easily than with steel of native manufacture. For goods intended for export it is asserted that it is practically impossible to use anything but Sheffield steel."

For the Preservation of Metals.

At the Montreal meeting of the American Society of Mechanical Engineers, an interesting paper was read on methods for preserving metal used in pipes, roofs, bridges, poles, construction work, etc. In conclusion, the whole question of how best to protect iron and steel from corrosion in all the varying conditions that the wants and usages of to-day demand, seems to resolve itself into several "Dont's," as the best method for answering it, to wit:

"Don't have any scale on the metal.

"Don't paint it with anything but pure linseed oil and oxide of lead or graphite paints.

"Don't forget that frequent inspection and care are very necessary.

"Don't let the cost and interest accounts be the governing factors in the case of protecting any metal structure on whose continuity and strength human life and safety depend.

"In comparing the two paints recommended, it may be well to add that a properly made graphite paint should prove more durable and a better protector than oxide of lead. Graphite has a strong affinity for metal surfaces, and experienced painters claim that even where light colors are desirable, graphite paint should be used as a priming coat. Again, graphite is impervious to the action of heat, cold, sea air, acid or alkali fumes, which are more or less destructive agents to lead paints."

The Joseph Dixon Crucible Co., Jersey City, N. J., have manufactured a pure linseed oil and graphite paint for over twenty-five years, and have some very convincing testimonials of its value.

Bullet Proof Shields.

The invention of bullet proof shields is enlarging, and the patent office will soon, if it go on at the present pace, be compelled to establish a special sub-department for the exposition of devices in this direction. A point is laid down by a New York engineer, which is that the outer surface of such material should be of a soft yielding material. This breaks the blow, and then the resisting material is apt to ward off effectually the force of the projectile. If the outer surface is hard and unyielding, the blow is sometimes so great as to overpower the recipient of the shot, and instances are on record that men on the battlefield have actually been killed by this shock. The whole subject is an intricate one, and the progress made in it is not such as to deter the inventor from thinking out new devices.

The course of prices since 1861 has been, when considered thoughtfully, quite remarkable. During the War, prices advanced so rapidly that discounts became premiums, and it was not uncommon on certain articles to get a quotation of 125 per cent. premium. As the war passed away, and contraction took the place of expansion, the tide turned, and discounts, instead of premiums, were again quoted. The shrinkage in all classes of goods has been large. Cheap steel squares, which in 1878 sold at 50 & 10 per cent., now only bring 85 & 10 per cent., a remarkable reduction all things considered. Naturally the great reduction has come about in that of the cost of material and the improvement in machinery, rather than in lower wages.

James B. Tetley, Hardware, Pittsburg, Pa. HARDWARE: Enclosed I hand you check for one dollar, paying subscription for HARDWARE till September 10, 1895. Am very glad to say I like HARDWARE very well; I sometimes get information out of one copy that is worth more than one year's subscription to me.

Mechanic to Governor.

In the fall of 1857, after the failure of the Ohio Life & Trust Co., business came to a standstill. In New Haven, Conn., where I lived, a few carriage shops kept a part of their great force busy, but with these exceptions all the great industries of that county were practically closed, says a writer in an exchange.

Among the thousands thrown out of employment was Hobart B. Bigelow, a journeyman machinist, who, after serving an old fashioned apprenticeship, had been for two years working at his trade in one of the large shops of the city. Some six months before the panic began he had married, and the couple were housekeeping in a three-room apartment in a modest way. Bigelow had in the savings bank a deposit of somewhat less than $200, which he did not wish to draw upon if he could avoid it. He had been engaged in building engine lathes of a kind for which there was a steady demand when business was normal. When his employers dismissed all their men except two or three, who were kept to do any odd jobs that might come in and keep the machinery of the plant in good condition, he went to them and told them he did not wish to be idle, that he understood the situation, and knew that months must pass before resumption of business activity could be expected. He asked them to let him come and work daily the usual number of hours and continue lathe building, they to charge up against the finished goods the cost of castings, use of the machinery, etc., and his time at his regular wages, the latter to be credited to him, and then, when lathes were again in demand, as fast as any were sold he should be paid for his work upon them and a specified percentage of the profit.

The firm consented. He then went to the tradesmen who supplied his family, told them of his engagement, showed them his bank book and arranged with them that on the first of every month he would pay for one-half of what he had purchased during that time, and they should trust him for the remainder until the lathes were sold. Six mornings every week he went to the shop, carrying his frugal lunch in his dinner pail, and worked his ten hours as briskly and blithely as though times were good. The following spring there was a resumption of activity, the lathes went off rapidly, and before midsummer Bigelow owed no man a penny and had more than $1000 to his credit in the savings back.

Nor was this all. A shrewd business man, one of those capitalists that labor leaders denounce, had seen the young man going daily to his work, and had his curiosity aroused sufficiently to make some inquiries about him. He was so favorably impressed that he sought an interview with Bigelow, and offered to set him up in business. The offer was accepted, and the young journeyman within eighteen months of the time of the shut-down was at the head of a considerable establishment, and before many years had passed he was himself a capitalist and a large employer of labor. Nor was that all.

He was so highly appreciated by his fellow citizens that, although a Republican, he was elected Mayor of the Democratic city of New Haven by a handsome majority, and a few years later, in 1880, he was elected Governor of Connecticut. Ex-Governor Bigelow died a few years since, mourned by his fellow townsmen; and those who knew him during his entire career like to refer to it, as the writer has done, as an example for other American workmen to emulate when times are hard and the outlook not encouraging. There are always better times ahead for those who have the courage and the faith of this young journeyman mechanic.

Regular Merchants vs. Transients.

The Elmira *Gazette* condenses considerable business wisdom into a little space in the following word of advice: "The Hardware merchants of Elmira are an honorable and square dealing body of men. They rent their stores by the year, and pay their help by the week or month. They sell straight goods, and represent them to be just what they are. It stands to reason, then, that the local merchants, who do business the year round, can afford to sell their goods cheaper than fake concerns which blow into town for a few weeks, rent a store for a short time and then ship their goods on to some other place. Cheap John Hardware looks tempting in a window, but when compared with substantial goods it can't stand the test, which fact is frequently not ascertained by the purchaser until after it is too late to get satisfaction. The Elmira Hardwaremen, who hire Elmirans to work for them, and keep their money in the city, need all the trade the city offers, and they should be patronized every time in preference to mushroom concerns who take the money away, and do not and cannot give as good value for the money as the old established tradesmen. Let these facts be borne in mind when reading hand bills about all sorts of wonderful bargains in Hardware."

Bicycles in the Hardware Trade.

INCORPORATIONS, NEW FIRMS, AND WHEELS ADDED BY THOSE ALREADY EXISTING.

Mukwonage, Wis.—The foundation has been laid for the new bicycle factory, which will be rushed to completion as rapidly as possible.

Toledo, Ohio.—The Colton Cycle Co, incorporated by Charles E. Kaufman, Geo. B. Colton, Frank G. Jaquet, John W. Fluke and Lewis B Colton, for the purpose of manufacturing bicycles and bicycle specialties; capital stock, $25 000

Oswego, N. Y.—G. B. Rich Cycle Co.; being organized by C. B. Rich, bicycle dealer, and others. A high grade wheel, the Ontario, will be manufactured, also ladies' and gentlemen's tandems. Capacity of the factory for the first year will be between 500 and 700 bicycles. Operations will commence with twenty skilled mechanics. The wheel to be manufactured is being designed by J. W. Shamp, of Buffalo, N. Y. Bicycle sundries will be added later on. A complete nickel-plate plant will also be added. The factory will occupy the second story of the Vulcan Iron Works building.

Cortland, N. Y.—E. B. Richardson, bicycles, store closed by sheriff, on three executions, amounting to $2883.36 held by Syracuse parties. Impossibility of making collections assigned for the cause of failure.

Madison, Wis.—The Hanson-Huennekens Cycle Co.; filed an amendment to the articles of incorporation, changing the style of the company to the Huennekens Cycle Co.

Boston, Mass.—The Overman Wheel Co. have broken ground for the erection of a new bicycle factory. The building is to be two stories in height and 40x70 feet.

Toledo, Ohio.—H. E. Richards & Co., bicycle repairing, removed to larger quarters at No. 618 Adams Street.

Portland, Me.—Bicycle Steel Tire Co., incorporated by John H. Coombs and E. L. Buffington, Boston, and E. L. Dyer, Portland, Me., to manufacture and deal in bicycles and other vehicles and appliances; capital stock, $250,000.

New Castle, Ind.—The Speeder Cycle Co. expect to get into their new plant, now erecting, by the first of December.

Syracuse, N. Y.—The Syracuse Bicycle Co. are placing on the market a new form of changeable gear, that promises to open up great possibilities with road riders.

Montreal, Can.—Reports throughout the Dominion indicate that all bicycle manufacturing plants are enlarging, and that many new concerns are preparing to build factories, as the result of the duty of thirty per cent. on bicycles imported from the United States.

Elkhart, Ind.—The Elkhart Cycle Co., incorporated by L. P. Halliday, H. E. Bucklen, Peltire Hill, W. L Collins, W. B. Pratt, O. D. Thompson, D. N. Weaver, J. H. Brodick and C. W. Green. The capital stock is $25,000.

Weatherly, Carbon County, Pa.—Weatherly Bicycle Mfg. Co., incorporated by William H. Caldwell, R. Boyd Schuyler, Wm. L. Driesbach, Williamsport, Pa., for the manufacturing and selling of bicycles and tricycles and all the parts appertaining thereto; capital stock, $30,000.

The Arcade File Works, Anderson, Ind., have let the contract for an addition to their works and will commence building the same immediately. The addition will be for the use of the forging and stripping departments. The building will be 95 feet long by 30 feet wide. It will be brick and entirely fireproof.

The Latest Catalogues.

E C. Atkins & Co., Indianapolis, Ind., with branch houses in Memphis, Minneapolis and Chattanooga, have issued under date of October, 1894, a very handsome and comprehensive catalogue of more than a hundred pages and printed in colors, of their well-known line of Saws, Saw Tools and Mill Specialties. Upon every page may be found illustrations and descriptions of these various articles, the illustrations in colors, and in addition thereto there is a great deal of interesting information of value to people who handle saws. The book is a very handsome production, and reflects credit upon the well-known company by which it is issued. In handing the catalogue to the trade Messrs. E. C. Atkins & Co. say: "Our illustrated catalogue for 1894 contains revised lists of the goods of our manufacture, and supersedes all previous lists. Prices are subject to change without notice. We have branch houses at Memphis, Tenn., Chattanooga, Tenn., and Minneapolis, Minn., where we carry a stock of goods; and each house has a repair department fully equipped with improved appliances and tools. All repairs sent to our branch houses will be skillfully and promptly done by expert workmen. We take pleasure in announcing that we have added to our plant a complete outfit of the latest improved machinery and appliances for the manufacture of hand saws, butcher saws, and all other kinds of small work. We are now prepared to fill orders for all kinds of saws known to the trade, and respectfully solicit your orders. Our aim will be to make the highest grade of goods that can be produced, by the use of special fine steels, made from our exclusive formulæ, and special machinery of the most advanced types, coupled with our successful experience of thirty-seven years. We confidently assure you that you will find our new lines as satisfactory to the user as those on which our reputation is so firmly established." They call especial attention to their new line of goods, hand saws and other small saws which they are now producing. Also their Columbian Mossback cross cut saw, which they say "is the coming saw, embodying all of the improvements in cross-cut saws." They further add that their line of silver steel hand saws are very fine goods, and are highly appreciated by the trade.

The Philadelphia Lawn Mower Co., Philadelphia, Pa., have issued a very handsome illustrated catalogue and price list of their well-known product. It contains not only illustrations of their various Lawn Mowers, but a great deal of other matter of interest in connection with that line, including Lawn Sweepers, Lawn Sprinklers and Carriage, etc., and in addition, has a number of interesting articles filled with information to anybody dealing in this line. Among them is one on the sharpening process of mowers, the construction of mowers, directions for ordering repairs, some notes upon export trade, etc. The book is handsomely finished in a typographical sense, and the illustrations are very finely printed. In a note of introduction the company say: "We invite your attention to our large line of Lawn Mowers included in this catalogue, and we trust by careful inspection of it, you may see we are keeping abreast of the age in the many improvements, and watching with unrelaxed attention the interests of our customers. They are constructed upon the best mechanical principles, and on account of their simplicity and superior construction, are more durable, possess more useful and valuable features, less liable to get out of order, and will do better work than any other Lawn Mower made. Our only regret is, that owing to the increased demands for our goods during the past season, far beyond our expectations, our facilities were for a while inadequate for handling the business, but our arrangements are now so complete that there will be no cause for complaint in the future."

Fred F. Bischoff, Libertyville, Ill., has issued a very large and well illustrated descriptive catalogue of the Bischoff Steel Shell Ceiling, which line HARDWARE has had the pleasure of making known to the trade through its columns continuously for some time past. All the forms and styles of decoration in this line manufactured by Mr Bischoff with sectional views, etc., are shown in this work which is certainly one that ought to be in the hands of every person interested in this line of goods. Mr. Bischoff, in description of his output in the catalogue, illustrating it, says: "The style of plastering the ceiling of buildings has been so long in use, and the expense to keep them in repair is so great and annoying to the occupants, that various improvements have been suggested by parties who are directly or indirectly interested in the building line. It is a well known fact, notwithstanding how careful plastering may be done, there are many serious objections: It is easily stained or discolored, and very little vibration causes it to crack and fall off in patches or in case of fire very often destroying it completely. These facts are well known and many practical men are devising different methods of overcoming these inconveniences and bringing into use a material that will not fill your building with dirt, and daub everything with which it comes in contact, and this material has been found in Sheet Metal Ceiling and Wainscoting. The advantages of this modern substitute are many and briefly cited. It is fire and waterproof, is durable and permanent, will not shrink, burn, warp, crack nor fall like plaster or wood ceiling. It cannot be spoiled from bursting waterpipes or defective roofs, consequently it prevents the destruction of carpets and furniture by that agency. It can readily be applied over old plaster, and remain perfectly secure. This is an important feature that will be readily appreciated by builders."

Sargent & Co., New York and New Haven, have issued a handsome catalogue covering their carriage and harness Hardware. It contains near fifty pages, and is filled with adequate illustrations and descriptions of the great line of goods which they carry under this heading. It will, of course, be a matter of impossibility to enumerate these, but those who are interested can very soon learn for themselves, by sending to Sargent & Co. for a copy of this handsome catalogue.

The Yost Mfg Co., Yost Station, Toledo, Ohio, have issued a handsome document called "The 4-Runner of 1895," describing and illustrating in colors their handsome line of Falcon wheels. This is a publication that ought to be in the hands of every Hardwareman who is interested in wheels as it will give him a great deal of practical information, even though he may not be interested in this particular wheel. We shall take pleasure hereafter in giving a more detailed description of the output of this well known company.

The Eagle Bicycle Mfg. Co., Torrington, Conn., have issued a handsome little leaflet describing their output for the coming year. It is headed "Aim," and in explanation of this word they say: "Our Aim for 1895 is to build the lightest and most reliable line of bicycles in the world. To accomplish this we have spared no expense to start right. Every feature of our new line for 1895 is new and a distinct departure. We have utilized no old parts or material. Each design is new even to the smallest detail The models are marvels of rigidity and lightness. Five distinct patterns, each of entirely new design, offer a wide range of choice. Specially constructed mounts for track racing and road racing, also for riders of more than average height, are prominent features. A featherweight Ladies' Machine, of new design, and equipped, not only with Eagle Aluminum Rims, but with aluminum dress guards, mud guards, trimmings, etc., serves to complete the new line."

The Lunkenheimer Co., Cincinnati, New York and London, have sent us a very handsome catalogue of more than 100 pages, bound in heavy red covers, of the line of brass and iron valves, lubricators and steam specialties manufactured by them. These goods are thoroughly illustrated with descriptions and price lists accompanying the same. In a note of introduction they explain that they pay great attention to a high standard of excellence, using "only the best materials" and maintaining "a rigid system of inspection in the production of every article," all of which are subject to tests before shipment. They further say: "All our steam goods are made according to the United States Government standard of steam composition. . . . Our rigid system and care in producing only first-class, high grade goods during the last thirty years, has brought our specialties to such a state of perfection, that we can justly and modestly claim that they are to-day better than ever."

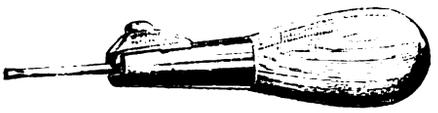
New Goods in the Market.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Johnstone's Brad-Awl Handle.

C. E. Jennings & Co., New York, are placing upon the market a recently patented invention, the Johnstone's Brad-Awl Handle, which is herewith illustrated. The awl is put into the

handle with one of the square sides of the flange of the awl against the projecting end of the socket and then the cover is screwed on tightly on top of it When changing the awl, the screw is slackened, and the cover turned to one side, a screwdriver being placed in the notch behind the flange of the awl, and then it is pushed out. The point in this handle is that it does not allow the awl to slip, the wood being penetrated no matter how sharply, the handle draws the awl quickly and securely. In these days when the carpenter drives the screw into the wood, the advantage of this handle will be apparent,

The California Wheel.

The Wheel here shown is the invention of Wells H. White. Los Angeles, Cal. It is constructed upon an unique principle. "It is made of but two pieces, not including the lap which covers the end of the axle, which are held together by bolts, and by the tong and groove principle when brought together and embracing the spokes between them, forms essentially but one piece of metal, between the spokes are held absolutely secure with the recesses in them for the annular rings in each half fitting perfectly, as shown in the engraving. The two pieces are cast with cores and recesses, so as to be babbitted and thereby fitting any size taper, length or shape of axle manufactured. This feature of the hub is considered of immense value to it, from the fact that the hub can be renewed in its wearing to an indefinite time by the babbitting renewals, at very light expense, and at the same time get absolute fit to the axle; and on account of the babbitt metal, the vehicle running much easier, and with any speed that can be obtained from a horse, heat would be impossible. The wheel being in place on the axle, the cap is screwed over the end, covering the nut and excluding the dust; it covers the end of the axle and

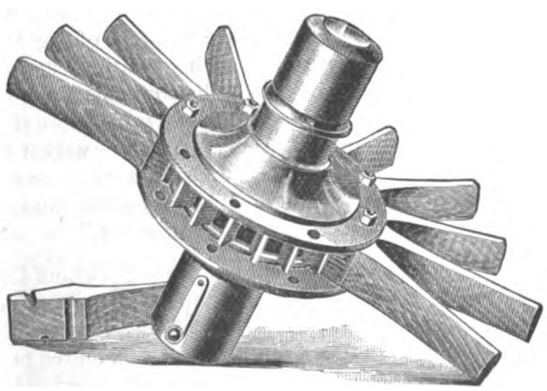


FIG. 1.—THE CALIFORNIA WHEEL.

hides the blackened grease that so completely mars the beauty of a hub. The entire hub, being made of malleable iron or any other alloy that may be preferred, can be electro-plated in either nickel or gold and kept up to any degree of finish. As for example, the outer front part of the hub can be quickly removed for re-plating, leaving the rest of the wheel intact; the inside half of the hub, always being finished in paint and varnish, the same as wooden hubs. Among the many and great advantages of this wheel, may be mentioned the fact that whereas, in all wooden hubs, the wheel is much the weakest part of it where the spokes go into the hub, from the fact that the spokes are here the weakest, having short bearings and thin tenons, whereas in this, the spokes are here the strongest, giving the wheel at this point fully double the strength of any other wheel, while at the same time any one or more of the spokes in case of breakage, can be taken out and new ones put in, by removing the front half of the hub, taking out the broken ones and replacing them with new ones, and this all done without re-

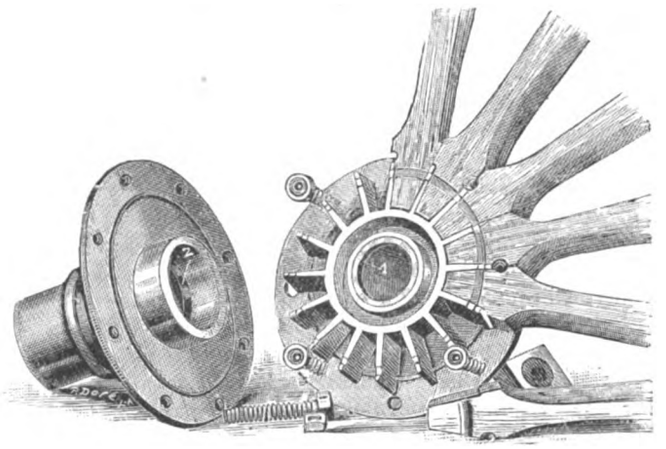

FIG. 2.—PARTS DETACHED.

moving a tire, cutting off a bolt head or boring out an old tenon. It is equally evident that the two parts of the hub can be drawn tighter together by the bolts, should the spokes show any shrinkage any time after use. It will further be seen from the engravings that the nuts on the bolts which hold the two pieces together are so securely locked that there is no possibility of the bolts jarring loose. It is further seen, that the axle can be oiled without removing a wheel or a nut from the axle or soiling the hands. Any or all pieces, including the cap, of which the hub is composed, may be kept in duplicate, making repairs a very simple operation. These wheels are made of any size or strength for all classes of vehicles, from the lightest sulkies to the most ponderous steam fire engine carriages, while at the same time with the proper finish of the front half of the hub, more beauty is obtained than in any other vehicle in existence. When the great difficulty of fitting different manufactured axles to different makes of boxes is considered and the cost attending the same, something of the value of this new wheel may be understood, and still more, when its extreme simplicity, durability, strength and susceptibility of high finish is seen, its value can hardly be measured."

Christensen's Line Fastener.

Herm. C. Larsen, No. 23 East Fourteenth Street, New York, is putting upon the market Christensen's Line Fastener, which was patented June 26, 1894, and is herewith illustrated. "With it one can tie and untie the line as easily and quickly as it is dropped. There is no slip, no jam or cutting of the line, and it is always readily and easily worked, thus saving the line, and paying for itself in a short time. This is accentuated by the fact that all pulley lines must be tightened every time that

clothes are hung upon them. In operating the line, the end that comes from the pulley in the window frame should be nearest to the slit, the other end is then pushed through in the opposite direction, and pulled through in tightening the line. A glance at the illustrations will readily show the advantages of the new over the old way."

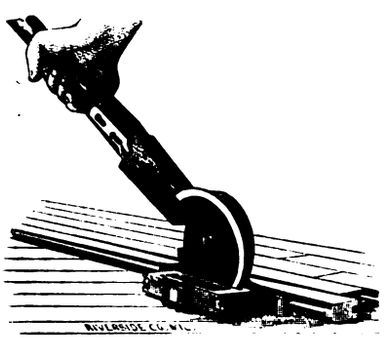
"Ohio" Knock-Down Stovepipe.

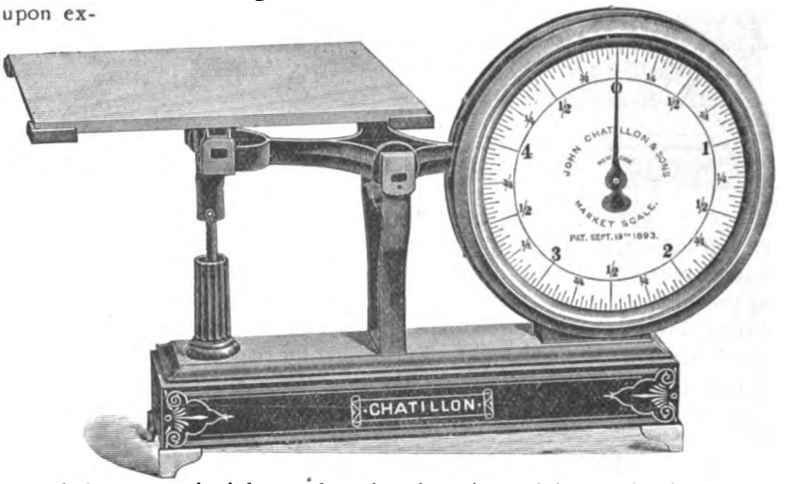
The "Ohio" Knock-Down Stovepipe is being placed upon the market by the Geauga Foundry & Mfg Co., Painesville, Ohio. The points which they make in its favor are "the ease with which it may be put together or taken apart, this being accomplished in a way that will become apparent upon examination; is strongly made and capable of being extended to almost any desired length without danger of collapsing or permitting any of the smoke to escape; is shipped in crates holding twenty-five joints of different sizes."



Hobart's Snow Shovel.

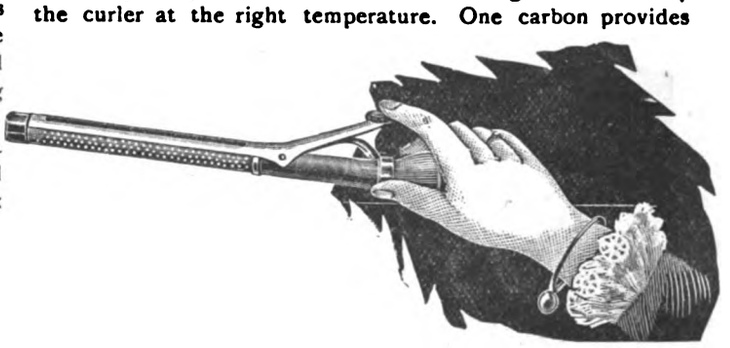
The new Hobart's Snow Shovel here shown is being placed upon the market by the Oliver Ames & Son Corporation, North Easton, Mass. In describing it they say that it has been "highly commended by all who have seen it. The shape of the blade is such that the damp snow will clean from it easily, and the handle being riveted into a socket makes it much stronger than the ordinary snow shovel. It is also adapted for use in stables and for ashes." They will be pleased to send prices, etc., upon application.

Handy Floor Jack.



The Handy Floor Jack is being placed upon the market by the Racine Malleable & Wrought Iron Co., Racine, Wis. When used, it is set against the board with the handle turned down, the operator's foot placed on the foot block, and the handle pulled up until the board is forced home, where it will stay without holding until the nailing is done; the handle is made to swing out of the way if brought down near enough to the edge of the board to interfere with nailing. The makers say:

"A Jack is not needed on the body of the floor where boards run straight and are easily driven up, but have the Jack handy so you can use when needed on crooked or poorly matched boards, and near the wall, where there is not room to drive. Where a particularly fine floor is required it should be used on every board, and will save time and give superior results. On poor matching where boards will not go up, put on a good pressure, and then strike a few light blows on the projecting end of the head block."



Chatillon's Even Balance Market Scale.

John Chatillon & Sons, New York, are placing upon the market their Even Balance Market Scale, which was patented September 19, 1893. The scale is herewith illustrated. It has agate bearings, is a most accurate and sensitive scale, made on new principles, and registering the weight on the dial instantaneously. It is one of the many improvements that this enterprising and progressive firm have made within the past year.

Gypsy and Trixy Curling Irons.

The self-heating Curling Iron here shown is being placed upon the market by the Trixy Hair Curler Co., Cincinnati, Ohio. They make both the Gypsy and Trixy irons, which are the same in construction, but different in finish. In description they say that "the curler consists of a light perforated metal tube, attached to a mandrel, having a small opening through its length; this in turn is connected to a rubber bulb, which serves as a handle; a chemical compound, known as a carbon, of a round oblong form, supplying the heat. The perforated tube contains a spiral wire holder in which the carbon is placed, the holder being inserted after removing the metal cap from the end of the tube. In operating, the carbon is lighted in the holder and placed in the perforated tube; the metal cap is replaced and the bulb compressed rapidly a half dozen times or more while the carbon is igniting; bulb is occasionally compressed while the hair is being curled to keep the curler at the right temperature. One carbon provides

sufficient heat to meet all ordinary requirements for curling at one time; the curlers are quick in operation, simple in construction, convenient in use, cheap, clean and practical; will never become smutty, corroded nor out of order; they will never burn out; no vexatious delays encountered in reheating or from over-heating; temperature may always be kept the same and do not burn nor scorch the hair." The Gypsy is of plain bright steel finish, while the Trixy is nickel-plated and provided with a plush finger piece. The curlers are each packed in a box with twenty-five carbons.

Box Strap Seal.

The Cary Mfg. Co., Nos. 5–9 Elm Street, New York, are putting on the market a patent Box Strap Seal, to which the accompanying cuts relate. The seal consists of a piece of sheet metal about four inches long, formed up as shown in Fig. 1, having a round nail hole in the centre of the bottom and oblong slots near the ends. The sealing strip, Fig. 2, is of soft card board with the name or initial of the shipper printed on it. The seal is for use in connection with the company's uni-

Digitized by Google

versal strapping. When applying the seal the box is first strapped in the ordinary manner, the ends of the straps, however, being left loose, and long enough so that the ends will not overlap each other. The seal is fastened to the case where the strap ends overlap by a nail driven through the small hole in the centre. The loose ends of the strap are then laid in the seal, over which is placed the sealing strip, the small holes in

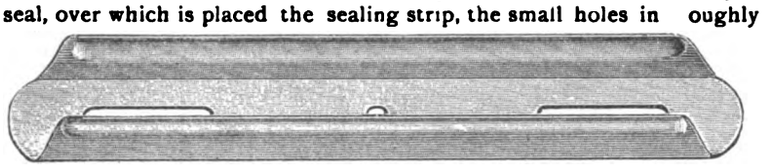


FIG. 1.

each end indicating where the nails are to be driven through the strip, both thicknesses of strapping and through the slots near the ends of the seal into the case. The sides of the seal are then closed over and forced down firmly upon the sealing strip by the aid of a closing tool furnished for that purpose. The raised edges of the seal are for the purpose of protecting

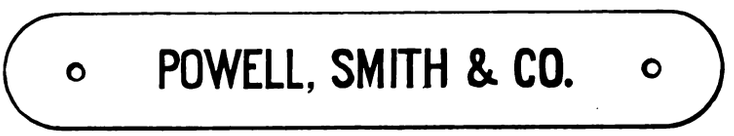

FIG. 2.

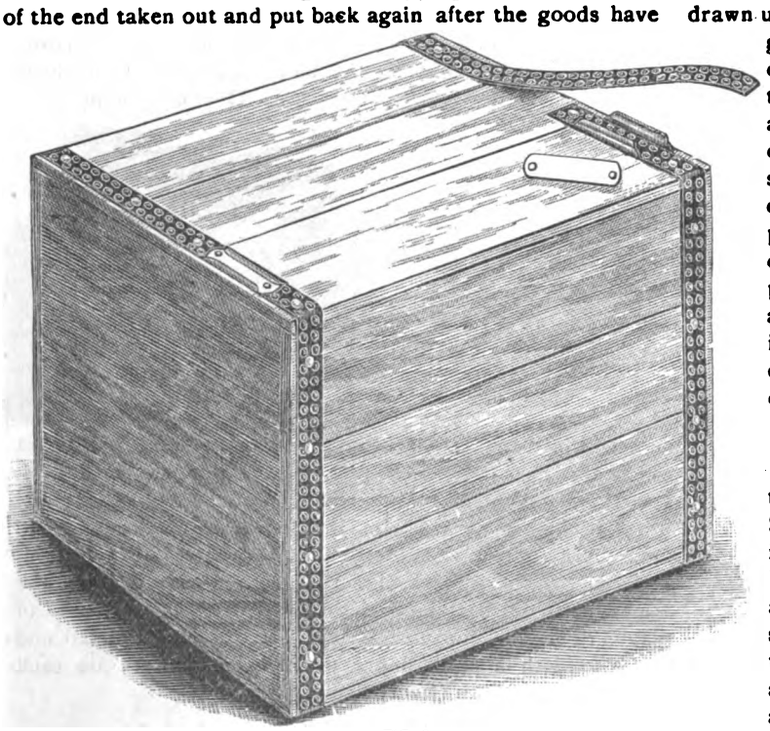
the name on the sealing strip from abrasion in handling. On one end of the case, Fig. 3, the operation of applying the seal is shown, while on the other end the operation is shown completed. The device is especially designed for the use of shippers of all goods apt to be stolen in transit, as it seals both ends of the strapping around the packing case. The case or strapping cannot then be tampered with without being readily detected upon receipt by the transportation lines or consignees. Cigars or other goods, where a cord is used around the centre of the case, the two ends being sealed together, are often tampered with by removing some portion of the strap on the end, and springing up a board and removing the goods in this way, without disturbing the cord or seal. In other cases where a narrow wire box strap is used, the nails are often withdrawn without removing the strapping, and some portion of the end taken out and put back again after the goods have



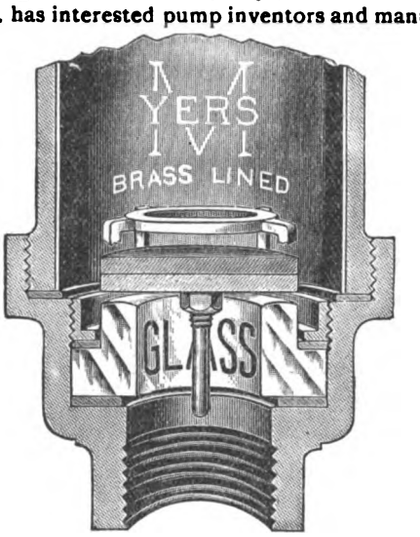


FIG. 3.

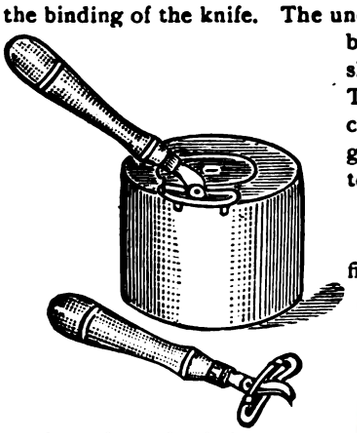
been stolen. This is absolutely impossible where the strap and seal are used, as the strap covers the heads of the nails in the sides, top and bottom of the case, so they cannot be withdrawn without tearing away the strap or breaking the seal.

Myers' Glass Valve Seat.

F. E. Myers & Bro., Ashland, Ohio, are successfully placing upon the market the Myers Improved Patent Glass Valve Seat, an illustration of which is herewith shown. They say that it has one feature of excellence common to all their pumps—patent drop valve. In further explanation they say: "The cut is a very plain illustration of an improved method of placing the Myers Patent Glass Valve Seat in pump cylinders. The subject of making a valve seat for pumps, that would be thoroughly reliable, has interested pump inventors and manufacturers for years. Metallic seats are not satisfactory, for the reason that they corrode and throw off particles which the leather check valve partakes of, causing it to become hard and lose its pliableness and packing qualities, and causing the pump to lose priming. Rubber seats do not have sufficient endurance for deep-well use. The utility of glass for a valve seat cannot be questioned. It is non-corrosive, and is smoother and more perfect than any metallic seat that can be machined. It is extremely hard and does not throw off corrosives, and the leather operating on the glass retains its softness. It will be apparent that the mode of holding the glass seat is the best that could be invented. The valve cap is turned out perfectly true. The glass is underlaid with a rubber gasket. The leather check valve is placed on top of the glass, and the glass seat and check valve are held firmly in place by a brass follower, which can be drawn up absolutely tight, thus holding the check valve and glass seat in a reliable manner. Another very important advantage is that the valve seat and check valve are entirely independent of anything else, and cannot be affected by the swinging of the suction pipe, or become disarranged in taking the pump or cylinder apart. The patented improvement is our exclusive property, and has been developed and perfected by us, and is now used in all Myers Pumps with seamless drawn brass or brass-lined cylinders of all sizes."

Phillips' Bent Blade Snow Shovel.

In the issue last preceding mention was made of a new Bent Blade Snow Shovel with a steel point, being manufactured by the A. J. Phillips Co., Fenton, Mich., and we are here permitted to illustrate the same. The makers speak in high terms of its lightness, and the adaptability of its form to easy loading and unloading. They also refer to the great quantity of snow which can be disposed of by its use, with little labor. They will be pleased to send further description, prices, etc., upon application.

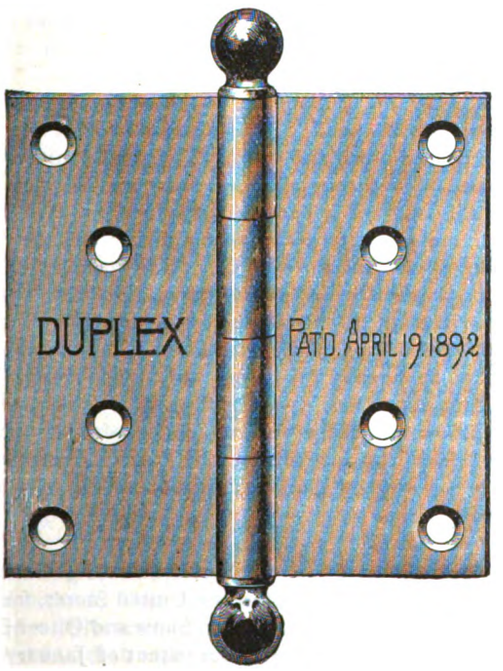


Yerdon's Can Opener.

Yerdon's Perfected Can Opener here shown is being placed upon the market by William Yerdon, Fort Plain, N. Y. Its form and method of operation may be understood from an ex-

Digitized by Google

amination of the accompanying illustration. The maker explains that the knives are of steel and oil tempered; the cutting is at the outer edge of the can; and adds: "The curved plate with guides compels the knife to cut on the extreme outer edge of the can, thus enabling the contents to be removed when so desired. The guide plate being of brass, will not rust and is not liable to break. The slot in the guide brake being beveled, allows the tin when cut to turn up, thus preventing the binding of the knife. The under surface of the guide plate being corrugated, prevents its slipping on the top of the can. The point of the knife cannot come through the slot in the guide plate, so it is not liable to cut the hand."



A Glass Oil Can.

The Ohio Lantern Co., Tiffin, Ohio, are putting on the market, through their agents, W. W. Pryor & Co., No. 81 Chambers Street, New York, a novel Glass Oil Can, with the sides protected with coiled spring wire, which affords a cushion to the glass, making it very difficult to break the glass either on the top or sides. The wire covering being woven around the glass jar or can allows the user to see the oil without having to look through the openings. The wire is tinned to prevent rusting, which often occurs when plain wire is used, making it neat in appearance and very durable. The trade can inspect samples, and get stocks such as they may need at factory prices, at the New York office.

"Duplex" Wrought Butts.

The accompanying illustration shows the "Duplex" Wrought Butt manufactured by the Reading Hardware Co., Reading, Pa., whose New York offices are at Nos. 96 and 98 Reade Street. This butt "differs materially from other wrought butts now in the market, in being made of double thicknesses of metal, and having hardened steel bearings which run through the entire length of the barrel in all sizes." It is claimed that this method of construction "adds greatly to the strength and durability of these butts." The "Duplex" are made in cold rolled steel and also in wrought bronze. They have wrought steel pins with ball tips and are finished in the best possible manner.

The Everett Raisin Seeder.

This Raisin Seeder is being placed upon the market by the Everett Specialty Co., Boston, Mass. It is described as a "simple device, that with a little practice will enable one to seed a pound of raisins in less than ten minutes. The simplicity of construction, and its low price, together with the perfection and ease with which it performs a work ordinarily irksome and tedious, commends it to every housekeeper in the land, as well as all restaurants, pastry cooks and hotels. A child can use it." The directions for its use show its ease of operation: "Pour boiling water over the raisins and let them stand a minute to prevent them sticking to the wires or hands. Spread the raisins while wet and warm on a table, bread-board, or any hard, flat surface, and press the wires down upon them, with the wires lengthwise of the raisin; use a slight rocking motion and just sufficient pressure to force the seeds through the wires. To remove the raisin, draw it toward the end of the wires, lifting it at the same time. Experience shows that the knack is readily acquired upon seeding half a dozen raisins. It is absolutely necessary to use boiling water to obtain the best results. Do not try to seed a dry raisin."

Keenedge Skate Grinder.

The Keenedge Skate Grinder here shown is being placed upon the market by Charles Perkins, Bridgewater, Mass. It is described as a useful and practical device for grinding skates.

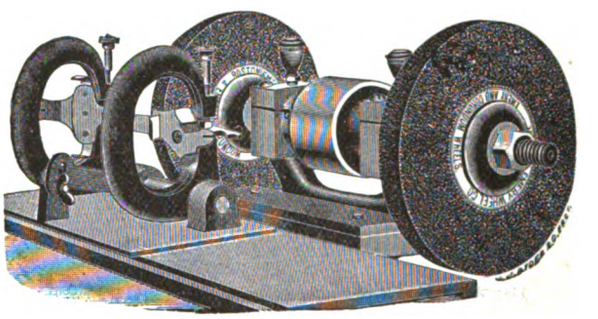


FIG. 1.—COMPLETE MACHINE.

In Fig. 1 we show the complete machine; in Fig. 2 the Skate Holder. "The Holder can be used on any emery grinder, by simply attaching a plate of wood or iron, and the skate is ground perfectly without the exercise of any skill on the part of the operator. Both the Holder and Grinder are thoroughly made, strong and durable, and sold at prices to suit the times With this machine a boy or inexperienced person can grind skates faster and better than an expert in the usual way. It will grind square or high on either edge as may be desired. Six to ten inch wheels of No. 40 to No. 60 emery should be used. Directions for use: Clamp the skate firmly in the

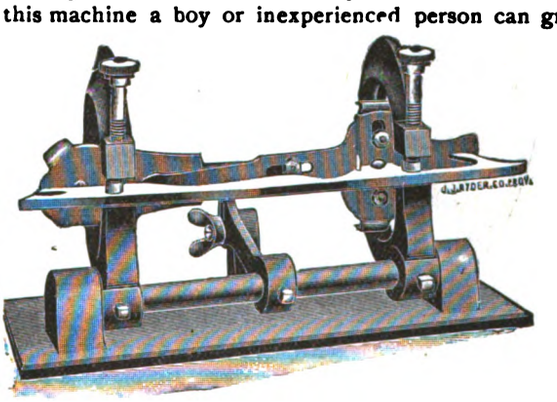

FIG. 2.—SKATE HOLDER.

Holder and move Holder and skate to and fro, holding the skate lightly against the wheel to avoid heating the runner. Care should be taken to grind the blade evenly for its entire length, taking as much off the ends of the blade as off the centre so as to preserve the proper curve of the runner." Price of machine complete, $30; Countershaft extra, $12; Skate Holder, $6; Foot Power machine complete with one wheel, $35.

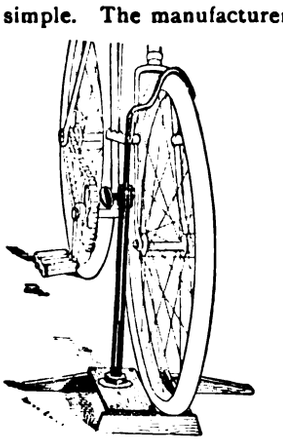
Illustrated Bicycle Novelties.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

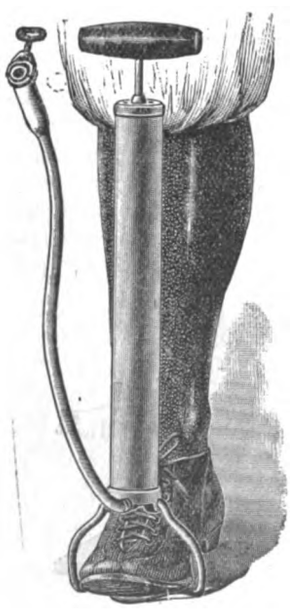
Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

New Bicycle Wrench.



The Barnes Tool Co., of New Haven, Conn., offer a new pattern of Bicycle Wrench for the season of 1895, which we illustrate herewith. It resembles their 1894 pattern in general



appearance, but is heavier, and consequently stronger. They report more sales of their 1894 pattern than of any of their previous patterns, and have indications of still greater popularity of their wrenches during the coming season. The 1895 wrench is all steel, case hardened jaws, finely finished and nickel-plated; the length is 5¼ inches; opens 1 5-16 inches; weight, 6¾ ounces. The makers speak of it in the highest terms of its strength.

The Pittsburg Bicycle Stand.

We show herewith the Pittsburg Bicycle Stand, being successfully placed upon the market by Wm. M. Justice & Co., No. 705 Penn Avenue, Pittsburg Pa. It speaks for itself, and is described as simple, strong, portable and cheap, whether for use in the salesroom, club house, home, or elsewhere. It will hold the bicycle upright, without being easily upset; has no frail parts; can be quickly and securely attached or detached; fits all sizes and styles; can be attached to either front or rear wheel; is light, ornamental and simple. The manufacturers are offering special inducements to jobbers and sundry supply houses and will furnish electrotypes for catalogues, etc. Further particulars can be obtained by writing to the above address.

Heath Ball Valve Pump, Etc.

In this connection we are permitted to show the Heath Ball Valve Pump and Universal Coupling, being placed upon the market by the S. F. Heath Cycle Co., Minneapolis, Minn. In describing it, they say: "This pump is used by cyclists to inflate their tires, and the coupling makes it possible to connect with all or any of the tire valves easily, quickly and perfectly, without using the thousand and one nipples necessary to the various valves. We have had an excellent trade the past year and have closed some very big contracts for the 1895 goods already. We have improved the pump in various ways; the finish will be much finer, the hose, instead of being half inch throughout, will be that size only at the outer end, the balance will be much smaller, thus giving flexibility and a saving in inflating the tire of one full stroke. The hose will be wired to a nipple so that all the customer will have to do on receipt of pump will be to screw the hose into the pump, attach it to his tire, and pump in the wind. We have improved the coupling, making it stronger and of such a design as to overcome some of the slight difficulties met with in the smaller valves. While we have added all these things at an additional cost to manufacture, the price will remain the same, not only to the user but to the dealer. We have prepared ourselves to manufacture in large quantities in anticipation of the demand sure to come, which we promise to attend to promptly in 1895, as in the year past."

The Works of F. E. Myers & Bro.

Under the heading, "A Glimpse of Some of Ashland's Successful Enterprises.—The Lessons They Teach," a writer in the Ashland (Ohio) *Press* speaks as follows of the extensive and busy works of F. E. Myers & Bro.: "Ashland can boast of one of the most successful industries of the whole country, in point of phenomenal growth and volume of business—the establishment of F. E. Myers & Bro. When we compare the present capacity of this firm with that of scarcely a dozen years ago, we are astonished at the rapid strides that must have been made. Think of the fact that just a few years ago they were struggling with their 'infant' industry on Main Street in the old Mansfield building, where their entire floor area did not succeed 3500 square feet. Now, after the completion of the new extension, the aggregate of floor space reaches to nearly 80 000 square feet. Their volume of business annually reaches nearly $400,000. Two hundred men are employed in the shops, and seventeen men at work as salesmen representing hay tools and pumps in every State in the Union. Nor is this the limit of their trade. Their goods reach many foreign countries, to which they are constantly increasing their exports.

"What kind of a lesson does this teach? Do we presume for a moment that men are, fortunately or unfortunately, the victims of circumstance? Circumstances have something to do with the history of every individual. But the individual has something to do with circumstances. He can shape them as far as his ability and energy go. This teaches a lesson of what ability, coupled with persistency, can do. We are very often eager to bring into question the legal and moral rights of men in accumulating riches; ready to point at more successful men with more contempt than pride, and eager to shove every one below us a little further down the hill. A miser is no better than a tramp, but a successful business is a benefactor to the locality in which it operates.

"Think of the many mouths that are being fed by the above firm through its channels of business and trade; the increase of wealth to the town and country; the many homes that are being maintained through labor rewarded. In fact, socially these enterprises are a benefit to the people. We see what sober manlike characters can accomplish. We see employer and employee working for each other's advancement. We see confidence in each other expressed in the office and on the street. In the office and in the shop you will find familiar faces. Men who have grown with the business until they now seem to be—they really are—a part of it. Their work has been acknowledged and their salaries increased. It is a pleasure to them to please, and enjoy the confidence of their employers. The growth of the institution itself means increased prosperity to the worthy laborers. Is not this a lesson to the sluggard?"

Suit is being brought by the Enterprise Mfg. Co. of Pennsylvania, in the Circuit Court of the United States, for the District of Connecticut, against Levi T. Snow and Oliver D. Woodruff, for infringement of the Baker patent of January 30, 1883, in the manufacture of a Meat Cutter designated "The Connecticut Meat Chopper." The patent sued upon is the same patent upon which, at the suit of the Enterprise Co., several parties were some years ago enjoined.

The Boston Belting Co., Boston, Mass., and New York, have issued a series of large cards bound together, illustrating the best modes of fastening belts of all sizes. The company are issuing these to their customers in the Hardware trade, who are not always posted as to the best methods of fastenings and attachments. The company have lately delivered to one of their customers a ten-ply rubber belt sixty-two inches wide, which cost fifteen hundred dollars.

Meeting of Stove Men.

A meeting of the National Association of Cast Iron Stove Manufacturers has recently been held in St. Louis. It embraced manufacturers from Quincy, Hannibal, St. Louis, Memphis, Nashville, Springfield, Mo., Indianapolis and Vincennes, Ind., and was called to discuss subjects of general interest to the members of the association. National Secretary D. M. Thomas, of New York, and National President George D. Dana, of St. Louis, and about twenty others were present.

The subjects discussed were:

1. The probable condition of general business during 1895.
2. The probable volume of the stove output in 1895.
3. The probable stocks of stoves December 31, 1894, in the hands of dealer and manufacturer.
4. The rate of molders' wages for 1895.
5. The probable cost of manufacture in 1895, as compared with 1894.
6. Losses through bad debts in 1894.
7. Freight rates on car loads and less than car-load shipments.
8. The present railroad classification, its injustices and the proper remedies.
9. Breakage by railroads and compensation therefor.
10. The unification of State laws for collecting debts.

The conference was purely of a private character, the members refusing to make the results public.

Some Notes from Pittsburg.

John Morison, No. 230 Fifth Avenue, will soon remove to larger quarters, his large and increasing trade rendering this necessary. He handles general and fancy Hardware and makes a specialty of bricklayers' tools, his stock in that line being one not equaled in Pittsburg. He carries tools not found in another store in Pittsburg.

The "hustlers" of the city are McKay & Riley, No. 2628 Carson Street. They carry a full line of fancy and builders' Hardware, stoves, tinware, paints and oils, and are having a good trade. They are clever gentlemen, as well as good business men, and well deserve the success with which they are meeting.

George A. Park, with A. P. Miller, No. 6 Carson Street, reports trade rapidly improving. They carry a general line of Hardware and builders' supplies, and are expecting a good winter trade. Mr. Park is an up-to-date Hardwareman and closely watches all indications of coming prosperity.

Tack and Shoe Nail Machines.

Wm. A. Sweetser, Brockton, Mass., is spoken of as "headquarters for this line of machinery and leads the procession." Established in 1869, he has continued to improve the machines, and now has a large assortment of the latest and best improvements in this class of machinery. He has lately added several important improvements to his Tack Machines, and has put on the market a new Nipper for feeding Shoe Nail Machines, which increases the product twenty-five per cent. It can be applied at small expense to any shoe nail machine. "No maker of these nails can afford to do without them." For further particulars apply as above.

George H. Chatillon, of John Chatillon & Sons, New York, announces that in consequence of the death of his brother, John P. Chatillon, which occurred in Paris, France, several months ago, the firm have dissolved, but that he will continue the business under the old name of John Chatillon & Sons, thus preserving an old and honored business title.

Question and Answer.

EDITOR HARDWARE: I am pleased to furnish you the information asked for by Mr. Lippman in your recent issue. The electric desk light about which he asks is made by McLeod, Ward & Co., No. 91 Liberty Street, New York.

Bicycles For 1895.—II.

WHAT THE MAKERS SAY AS TO OUTPUT, IMPROVEMENTS AND PRICES.

A VARIETY OF ANNOUNCEMENTS, OPINIONS AND CHANGES.—INFORMATION OF VALUE TO THE HARDWARE TRADE.

In order that the Hardwaremen of the country may learn as early as possible in regard to the output, prices, etc., of the bicycle manufacturers for 1895, HARDWARE has opened correspondence with the leading concerns of the country, some of whom announce that they are not yet ready to furnish the information desired. We take pleasure, however, in herewith submitting considerable information of value upon a subject which certainly must be of interest to the Hardware trade.

THE CRAWFORD LINE, 1895.

Crawford Mfg. Co., Hagerstown, Md., and New York City: "The Crawford line for 1895 will consist of the following wheels:

"No. 19 and 20—28 inch, Diamond and Drop frame, strictly high grade, list $75.

"No. 17 and 18—28 inch, Diamond and Drop frame, list $60.

"No. 11 and 22—26 Inch, Diamond and Drop frame, list $50.

"No. 13 and 14—24 inch, Diamond and Drop frame, list $40.

"Our 1895 line will be second to none in improvements. Each and every one will be strictly up to date, highest grade, excellent sellers and thoroughly guaranteed. The tires used will be the Columbia Single Tube (Hartford Rubber Works Co.); the Akron, Summit and Competition (the Columbia Rubber Works Co.); the Dunlop (American Dunlop Tire Co), and the Morgan & Wright. We will exhibit at the National Cycle Show, Madison Square Garden, January 19 to 26, '95, spaces Nos. 78 and 79, where we will be pleased to have the trade look us up and inspect our line."

THE POPE CO.'S LATEST ANNOUNCEMENT.

The Pope Mfg. Co., in further announcement to the trade, under date of November 1st, say:

"All single Columbias, both road and track, will be listed at $100, and we are earnestly devoting every resource of our establishment to the preparation of our line, which is to be the finest and the most advanced, and which will be calculated to meet the requirements of every buyer who is able to put $100 into a Bicycle. They will be better than ever before.

"As the next feature in our line we shall take the entire product of the Hartford Cycle Co., which concern, as you are aware, we started and have owned entirely from the outset. For 1895 they are to produce for us a man's and a lady's Hartford, of the same high class of workmanship for which they have already gained so good a reputation, but brought strictly up to date in all respects, and made most suitable companions to 1895 Columbias. While we cannot claim for them the same high value as for Columbias, we confidently assert that they will be equal in durability, lightness and in all the qualities which go to make up a high grade Bicycle to anything else on the market, except one or two of other makes. The price of the Hartfords we fix at $80. Next, the Hartford Cycle Co. will make for us a line to be known as the Wizard Bicycles, also up to date, fully equal to any that they have ever made before, and as good Bicycles as many manufacturers are putting on the market as high grade and at high grade list prices. The Wizard will list at $60 for the man's and lady's, and $50 for the boy's and girl's 26-inch machines."

H. A. LOZIER & CO.'S ANNOUNCEMENT.

H. A. Lozier & Co., Cleveland, Ohio: "We acknowledge yours of the 5th, and beg to submit the following: It is our plan and purpose to continue our policy of superlative grade of manufacture. We shall cater to more extensive business relations with the Hardware trade, believing that the Hardware dealer in the bicycle business has every advantage at his command: first—in the opportunity for attractive display of goods; second—available help without extra cost; and, finally, no reason whatever why the bicycle department of his business should not prove a profitable one. Our wheels for 1895 will be of most modern construction, embodying intrinsic points of superior excellence as well as attractive selling ideas. We shall adhere strictly to the sincere high grade quality that guarantees satisfaction to purchasers and a constantly increasing trade to those that handle The Cleveland. Our prices will be high grade and our discounts as liberal as we can afford. Our 1895 product will be ready for market in January; some styles prior to that date. Our catalogues we shall mail about January 1st, and shall be pleased to receive application for same from every Hardware dealer. Our agencies will be exclusive with the fullest protection possible."

THE EAGLE WHEELS.

Eagle Bicycle Mfg. Co., Torrington, Conn.: "Your esteemed favor received. Replying, would say that our interests will be looked after in the West by the Simmons Hardware Co., of St. Louis, and the Woodrough & Hanchett Co., of Chicago. The companies mentioned, with their facilities for marketing wheels, will be in a position to quote the retail trade the same prices which we will quote the retail trade in the vicinity of our factory. They will place wheels in stock at an early date, which will insure their customers receiving ample wheels promptly. We enclose a pamphlet in which we outline to a certain extent our views for 1895. Referring to the matter of price, would say that it is our object to turn out a machine of the very finest quality, and the riders purchasing them will get value received. It has always been our policy to look carefully to the interests of our retail agents. We realize that through their pleasant and profitable business relations with us, lies our future increase in business. Agents handling our line of wheels will find themselves well able to compete with anything on the market. Considering the fact that most well-known makers of high class machines had no difficulty in disposing of their product last year at standard prices, we see no cause for the reduction this year, other than the fact that some large makers felt the necessity of keeping their plant in full operation, and have made a bid both in quality and price for the portion of trade formerly handled by the makers of medium grade goods. There will always be riders who demand the best, and this is the trade which we aim to secure."

SYRACUSE LINE FOR 1895.

Syracuse Cycle Co., Syracuse, N. Y.: "In reply to your esteemed favor of the 1st inst., we beg to submit to your notice the following, which will comprise our 1895 line: Our Syracuse line will be composed of several models all strictly high grade throughout. Special Syracuse will be an extremely light road wheel, weighing in the neighborhood of 20 pounds. It will be elegantly finished and most artistically striped. Fitted with Syracuse crimson rims. List price, $125. Highest possible grade. Twenty-eight inch wheels. Syracuse Pacer will be on exactly the same lines as the Special, but of a heavier tubing. Strictly high grade, fitted with crimson rims. Enameled in plain rich black. Weight, 23 pounds. List price, $100. Twenty-eight inch wheels. Syracuse Model C, will be our Fat Man's Wheel. It will be like the Pacer, but will weigh about 27 pounds. This wheel is designed to meet the demand of large, heavy people, who are timid about risking their necks on a featherweight. To an experienced rider, weighing 325 pounds or less, we would guarantee absolutely this machine. Enameled in plain black. Syracuse Crimson Rims. List price, $100. Twenty-eight inch wheels. Our Track Racer will be a gem of its kind. Elegantly finished in beautiful vivid crimson, it will brighten any racing track upon which it is seen. Weight, 15 to 19 pounds. List, $125. Twenty-six inch wheels. Syracuse Thelma is the name of our lady's machine. It will have the same pretty direct lines which distinguished last year to the trade, but of a more improved and up-to-date design all the way through. Enameled in plain black. Syracuse crimson rims. Twenty-six inch wheels. Weight, 24 pounds. List, $100. Syracuse Tandem will weigh about 40 pounds, and list at either $175 or $200."

GEORGE N. PIERCE & CO.

George N. Pierce & Co., Buffalo, N. Y.: "We recognize the fact that outside of large cities, where firms give exclusive attention to the Bicycle business, the Hardware trade is the proper party to introduce the wheels. Each season finds such great improvements made in the construction of the wheel that for the repair shop it is not necessary to have as complete a line of tools and as skilled mechanics to do the work as it

Digitized by Google

has been absolutely necessary in the past. The construction of our wheels will be very simple, and almost any employee with a few simple tools can do any repair work that will be necessary on the wheels that we propose to send to the trade for '95. We have been since early summer constructing our '95 patterns, and are making an entire change in both our men's and boys', ladies' and misses' wheels, and shall furnish to the trade seven entirely new wheels. We started with the price in our mind before we began the wheels, and were governed accordingly."

THE WESTERN WHEEL WORKS.

Western Wheel Works, New York City: "Your letter of the 1st has been referred to us, and we would state in reply that we cannot give you any positive information regarding what changes we will make in our 1895 line, as we do not put them on the market until January 1st. As we have already announced, our prices for 1895 will be the same as they are this year, as we have demonstrated that a first-class bicycle can be made and sold at a low price. Our 1895 will be made of the very best material we can buy, and we will endeavor to give Crescent buyers as much for their money as we possiblv can. We can assure you, however, that 1895 Crescents will be equal in material, workmanship and finish to any roadster bicycles made listing at any price."

THE GENDRON WHEELS.

Gendron Iron Wheel Co., Toledo, Ohio: "The prospects for the coming season in this line are very encouraging, as we have already several large orders for 1895. Our output will be about thirty-three per cent. more than last year." In their new catalogue the company say: "Previous lists and discount now void; 1895 prices and terms noted on application. Under no circumstances do we put out Bicycles on sale. There must exist both an ability and a willingness to invest in them in order to secure their agency. We guarantee the Bicycles herein catalogued to be free from all imperfections in material and workmanship, and will replace at our factory, without cost to sender, any time during the year 1895, all parts which show imperfection. This guarantee applies to the 'Buckeye' pneumatic tire."

NEW TWENTY INCH PNEUMATIC TIRE BICYCLE.

George N. Pierce & Co., Buffalo and New York City, inform us that they are placing upon the market a twenty-inch Pneumatic Tire Bicycle, Diamond Frame, and are now showing the same at their New York offices, No. 107 Chambers Street and No. 91 Reade Street. They say: "It is the only twenty-inch pneumatic on the market; is very light, only twenty-three pounds with the brake on. The frame is of Mannesman tubing. New York tires are used; spokes are nickeled tangent, rims steel, saddle Solid Comfort Bicycle entirely ball-bearing. The general appearance is stylish, and of a high grade in workmanship and material. Guaranteed for one year."

THE MCEWEN WHEEL.

McEwen Cycle Mfg. Co, Elgin, Ill.: "In addition to the Red Seal Repair Outfits, Chain Lubricant, Cement, Oil, etc., which we have been marketing this season, and with which we have done a very satisfactory business, we have manufactured in a small way a bicycle known as 'The McEwen,' of an up-to-date high frame pattern. We expect, this coming season, to greatly increase our business. Our road wheels will weigh 21 pounds; racers, 18 pounds, and our special light diamond wheel for ladies, 13 pounds."

MISCELLANEOUS.

Royal Cycle Works, Marshall, Mich.: "We are pleased to reply to your inquiry of November 1st, relative to our plans and purposes for '95. It is our purpose to double our output this season, making it between three and four thousand—constituting a road wheel weighing 23 pounds or under, a racing wheel from 18 to 20 pounds, and a ladies' wheel weighing 24 pounds. These wheels will be made in the most approved manner, best material, most artistic design, and really six months in advance of the times. The Royal will be one of the few very high grades."

The Central Cycle Co., Indianapolis, Ind., will list the Ben Hur Bicycle at $65. W. H. Wilhelm & Co., Reading, Pa., will list the Reading Racer, the Road Racer, Roadster and Ladies' Wilhelm at $100, and their tandem at $125. McKee & Harrington, Lyndhurst, N. J., have made the prices on the Lyndhurst at $100, $125 and $135. The Marion Cycle Co, Marion, Ind, announce that their list on the Halladay-Temple Scorchers will be $100 on all wheels weighing over twenty-one pounds, and $125 on those weighing twenty-one pounds or less. The Relay Mfg. Co., Reading, Pa., are not yet ready to announce their prices. O. J. Faxon & Co., Boston, will list a standard Puritan machine for road use at $100. Another wheel, much lighter and with all recent improvements, will be placed at $110, and this latter wheel with a patent improvement of their own will be listed at $125.

The Ames Mfg. Co, Chicopee, Mass., say that the Ames Wheel for this year will listed at $100, giving the regular trade discount.

The Acme Mfg. Co., Reading, Pa., have made the following prices: Stormer, Model A, $65; Stormer, Model B, $75; Stormer, Model C, $85; Stormer, Model D, $75; Stormer, ladies' wheel, $70.

The Stover Bicycle Mfg. Co., Freeport, Ill., state that their standard list price for the year will be $100. They say further that they shall continue to manufacture only the highest grade of wheels, and that this reduction in price is because of the advancement made in bicycle manufacture, "and also from the fact that a number of different parts of the wheel can be bought much cheaper by the manufacturer."

Lufkin Steel Rule Card.

The Lufkin Steel Rule Card, an admirable and salable article which was illustrated and described in the last preceeding issue of HARDWARE, contains one dozen rules, and the price is $2 net per card. A sample card will be sent for that price, with twelve cents extra for postage, by the manufacturers, the Lufkin Rule Co., Saginaw, Mich. It is a neat display card, made to set on the counter and show-case, each containing one dozen one-foot flexible steel folding pocket rules. These Rules are made of spring steel No. 28 gauge, four-inch joints three-fold, put up in handsome metal bound embossed leather cases of assorted colors. They are light, compact, convenient, durable, and just the thing to carry in the vest pocket, and are ready sellers at twenty-five cents each.

The Samuel Winslow Skate Mfg. Co., Worcester, Mass., have issued a handsome colored lithograph, about two by three feet in size, showing two of the beautiful daughters of America making the best possible use of the product of this great house. A framed copy of the same, with the compliments of the company, has been received at this office, and now occupies a prominent place upon our wall. It is an artistic presentation of a good article.

Rubber truckmen report a good business in their line, being kept very busy. The demand is from the mechanical goods men, as well as from the boot and shoe men, and is widely scattered all over the country. For the boot and shoe trade the season has opened with much storm and wet, more so than usual, and this has given an unexpected firm tone to the crude rubber market.

The Yale & Towne Mfg. Co., Stamford and New York, have had their contract continued to furnish the post-office department with boxes for post-offices throughout the country. The decision was reached by a committee which represented the internal revenue post-office and treasury departments.

W. S. Maltby, the world-renowned trick and fancy rider, is making a trip to the Pacific coast in the interest of the Keating Wheel Co., of Holyoke, Mass., returning via the Southern States. Mr. Maltby will give exhibitions on his Keating bicycle, and establish agencies in all the principal cities.

Fred. Topping, of Topping Brothers, New York, who was somewhat seriously indisposed, has fully recovered and is able to resume his duties.

English Hardwaremen's Association.

This new trade protection society, as its title denotes, The Ironmongery, Hardware, and Metal Trades' Protection Society, confines its operations to the guarding of the interests of the ironmongery, Hardware, and metal trades throughout the United Kingdom. It seeks its members and clients in both wholesale and retail branches of the trade. Although but a few weeks old, it has enlisted a fair membership, and has gained the support and sympathy of some influential and well-known firms. It must be understood that the society is purely a business institution, and by no means desires to pick up the dropped mantle of the Ironmongers' Association now some long time defunct. An important feature of the new enterprise will be the collection of debts due to members of the society at a nominal commission on the amounts recovered. By its general manager or agents the society also attends meetings of creditors on behalf of its members free of charge. It would also, when desired, call, hold, and conduct meetings of creditors, and carry out private arrangements. In the legal branch of the society's work the solicitors, Messrs. Hadman, Ward & Collier, of No. 7 King Street, Cheapside, London. undertake to answer all questions of mercantile law affecting the trades represented without charge to members. Partnerships and sales, and transfers of business are also negotiated and arranged by the society on most favorable terms to subscribers. Special attention is also given to the registration of trade marks and designs. Mr. John Baker, of the firm of Messrs. Baker & Haywood, chartered accountants, is the general manager of the Ironmongery, Hardware and Metal Trades' Protection Society. The offices are situated at Throgmorton House, Copthall Avenue, London, where all inquiries should be addressed. In order to secure a large membership, the subscription has been placed at the low sum of half a guinea per annum. Full particulars of the purposes and functions of the society will be sent on application.—*Hardwareman* (England).

Recent Incorporations.

Chicago, Ill.—Chicago Gas Stove Mfg. Co.; capital stock, $20 000. Incorporators, John S. Bindell, William Laemmer and Cyrus Falconer. Jr.

New York, N. Y.—McCabe Mfg. Co., to manufacture and sell builders' Hardware; capital, $25,000. Directors, James T. McCabe, Edgar Zabriskie, Charles S. Lester and Frank A. Wilmot.

Goshen, Ind.—Goshen Hardware Co.; capital, $10,000.

Portland, Me.—G. F. Quinn Refrigerator Co., incorporated to manufacture and deal in refrigerators; capital stock, $10.000.

Oconomowoc, Wis.—Sterling Hardware Co., incorporated by Harriet S. Gee, Charles L. Gee and Harry F. Gee, with a capital stock of $6000.

Rochester, N. Y.—Punnett Cycle Mfg. Co., incorporated; capital, $5000.

Plymouth, Ind.—Plymouth Cycle Co., incorporated; capital, $100,000.

In the display of goods in a Hardware store there is no general principle which can be laid down. A great deal depends upon the locality, and the condition of the wants and demands of the community. As a rule it is not necessary to expose heavy lines, such as nails, nuts and bolts, while on the other hand novelties and seasonable goods may be placed to the front in a lavish manner. The more showy goods can be placed near the door, as a street attraction, while the window is a subject that allows of more skill and art than can be described in a paragraph.

A Lewiston (Me.) man has two or three dozen different styles of electric bells connected with a battery for the purpose of showing to the people who wish to buy, how each one rings. The press-buttons to ring these are situated on the top of a counter in the rear of his store, while the bells are on the wall above. He was at work on his books at half past twelve the other night when all the bells commenced to ring at once. His hair stood on end a minute, and taking up a big wooden mallet he crept out to the buttons. A grindstone had fallen over upon them.

Review of the Markets.

Money: The feature of the past fortnight has been the announcement of a new loan by the United States Government, for fifty millions of dollars. This is for the purpose of replenishing the gold in the treasury, and at the same time supplying the government with funds. Whether the desired result will be reached is a subject of debate, but the indications are favorable. The rates for money are stiffening, and this is an indication that general business is improving. The volume of trade is certainly increasing, but there is a general, almost universal, complaint about prices, which seem to be on the downward track without any intermission in sight. This is caused chiefly by the reduction of the price in raw material, and to some extent in wages.

In the movement of Hardware, travelers are sending in very fair orders from all parts of the country. The weather being colder than usual at this season of the year, has stimulated the demand for seasonable goods, and the movement in this direction has been in the northern section of the country very considerable. Of course this has in its turn made an uncommonly good demand for snow shovels, sleds and skates, and it is a peculiar side of the depression through which the manufacturer has passed, within the past two years, that the demand for these luxuries has actually increased. In this line the factories are behind, and have had to work overtime to keep pace with the orders that have accumulated and naturally are urgent.

Paints have at last commenced to show activity, and the business outlook is brightening. The distribution of white lead in oil has been unusually good within the past few days, and when it is known that purchases are confined to the immediate wants of consumers, the situation is encouraging. Prices are more steady in lead products, although there has been no decided action upon the part of corroders. In red lead there has been a better demand for domestic for delivery in the West. In litharge there is a better demand from both the rubber and the glass trades. German grades for glass makers' use are quiet. Barytes are in good request, and prices are firm. Putty is in good request. Linseed Oil is in good demand, with some concessions in prices, given by crushers who are in immediate need of cash.

Metals: Tin has been weak, and buyers have had little difficulty in making purchases at receding prices. The London market has been heavy, with large sales, while stocks here are large. Copper is unsettled, stocks being heavy, and orders from both export and home trade buyers being slow. Lead is in moderate demand, the market showing some firmness owing to reserved offerings. Spelter is dull, with stationary values. The trade is in carload lots. Antimony is steady but quiet. Tin-plate is steady. Iron and steel are in moderate demand, with very little fluctuation in prices.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Nails: Wire Nails are in good demand, with many inquiries from large buyers for stock in the next year's trade. Prices are not firm, a figure of 90 cents having been made for carload lots at the mill, and out of store in New York at $1.15@$1.20. Cut Nails are also lower, the price being 95 cents for

Digitized by Google

carload lots on dock in New York, with small lots from store in New York, held at $1.05@$1.10.

Barb Wire is weak, with a quotation of $1.85@$1.90 at Pittsburg. In all heavy goods, prices drop because of the downward tendency of iron.

As an instance of the activity of the skate trade, one manufacturer has placed upon the market this season 227,000 pairs.

Clapp & Co., Bankers & Brokers, New York, state in their weekly circular, as follows: "Enumerating the blessings of a healthy present, helps patriots to forget ills of an unhealthy past. The fruits of virtue, wisdom and economy are as visible in the day of harvest, as are those of vice, folly and extravagance in the hour of their undoing. The altars of civic conscience and national progress will reflect the glow of many patriotic hearts on this Thanksgiving Day. To customers and friends in every State we extend congratulations that the affairs of the business public and the nation's wage earners and producers appear improved or about to improve. We thank all for kind words and deeds, social and businesswise lavishly bestowed, which are inspiring our effort to do more and do it better. We trust you will join us in the cheerful retrospect, and looking back can say that the evidences of trials are fewer than expected, and less than the remembered satisfaction and joys. In looking forward it is a cheerful prospect to feel a certainty that the financial panics of the nineteenth century are behind us, and the unwritten page, which is always full of hope and promise to the men of action, is before us. U. S. Treasurer's report will show Government paper money redeemed and reissued during fiscal year has exceeded redemptions by $60,000,000, and reached, about June 1, 1894, $1,175.054 480, the highest point ever touched. That redemptions of U. S. Treasury notes in gold since June 30, 1892, to October 1, 1894. were $206,584 819, and gold exports same time were $205.245,234. U. S. mines in same time produced about $80,000,000 gold and $175.000,000 silver."

THE DAVENPORT TRADE.

Hand sleds are going swiftly; orders are coming in for sleigh bells with no uncertain sound; the banks require snow shovels; skates are running off smoothly; cold weather is making coal shovels go, and thermometers are down.

Trade in corn poppers is hot; in axes it is sharp and well handled; many orders for wood choppers' wedges are entered; snow and ice scrapers are being pushed; lantern orders are light.

The outlook for tin-plate is light; but in ternes it is dull on account of the lateness of the season; solder is steady, and it is safe to report it about half and half.

Stovepipe is up, and many elbows are placed; business in soap stones and cake griddles is warming up.

Potts irons have declined and holders of large stock are *sad* in consequence. The market is demoralized and cutting continues in butcher supplies, hay knives and wood saws; a few trap orders are being caught; cordage orders are being roped in freely and a number of binder twine contracts are on the string. A clean business is done in washing machines, but the wringer trade is dry.

Extension ladders are high; there is a snap on halters, halter leads and cow ties; orders for sausage fillers do not appear to be stuffed; the break in window glass continues; linseed oil remains high, hence the recent advance in putty seems to stick.

The root of all evil is gathered in satisfactory quantities.

S.CKELS, PRESTON & NUTTING CO.

[Davenport physicians believe that Mr. Nutting, author of the above, will survive.—ED. HARDWARE.]

THE PHILADELPHIA TRADE.

The good feeling continues, and perhaps some evidence of it is found in rather free orders and better quantities, but there is no likelihood of a speedy recovery of business. The patient has been very sick, and convalescence may be long. Still, there is now some ground for hope, and orders are being placed with greater feelings of security. As usual, manufacturers are the first to feel any improvement, and in many lines they are once more working six days a week, and in some cases even making up stock, and this is a sign of promise.

Prices, if anything, are firmer; there is a general feeling that stocks are actually worth more money than two weeks ago, and manufacturers' meetings to discuss, maintain and advance prices are becoming more frequent, and this is another good sign.

What we now want is some good cold weather to move skates, sleds, snow shovels, etc. These are already selling quite freely, but freezing weather would put some needed snap into business. BIDDLE HARDWARE CO.

THE MINNEAPOLIS TRADE.

Since the election, business has improved wonderfully. We hear this on all sides in every line, and not confined particularly to the Hardware line.

Naturally, the stove dealers are busy, but the general improvement has come so late that it will not enable us to do our usual amount of business; however, aside from builders' Hardware and the lines dependent upon building operations, merchandise appears to be moving much the same as in former years. We shall, of course, expect a dull winter, as all classes are and have been curtailing their expenditures as much as possible, but everyone feels encouraged now, and the outlook for spring business is very good indeed.

Lake navigation is practically over, and inventory will be upon us soon, and very few more goods will be taken into stock this fall. Orders are coming in quite freely from the country in all lines and for a large variety of goods, but purchases are still in small quantities.

The farmers are all through with their fall plowing, and we are having a taste of winter weather. Wheat is being marketed; this will make money more plenty, and ought to make an improvement in trade all around.

W. K. MORISON & CO.

THE VARNISH AND COACH COLOR TRADE.

It is gratifying to note a considerable improvement in the Varnish and Coach Color business since our last letter. This extends not only to sales and orders, but to collections as well, which we think shows a particularly promising outlook. The bulk of the business transacted is largely in excess of last year, and perhaps an improvement on any former time.

At a season of the year when not very much is expected in our lines, the improvements noted above are exceedingly interesting. EDWARD SMITH & CO.

Times Building, New York.

THE AUSTRALIAN TRADE.

A general review of trade during the past month does not disclose any new features of importance. There is no improvement worth recording in actual operations, taken on the whole. But the increased yield of gold, more especially in Western Australia, is encouraging, as promising greater business activity in the near future. The pretty wide extent of the recently discovered Yilgarn gold field and the generous output so far, contribute to the belief that when more fully developed, this section will be one of wonderful prosperity, the good effects of which will be felt throughout the Colonies. Already, with but a mere scratching of the surface, the results have been phenomenally rich, and have materially aided the other Colonies in relieving them of surplus population, and in supplying the requirements of the miners.

In Victoria, the probabilities of lower duties have assisted in retarding import movements, which will continue to obtain until the question is finally settled by the new parliament. In the other Colonies, business as a whole is slow, but free from any disquieting conditions prejudicial to future prospects of a steady improvement. McLEAN BROS. & RIGG, LTD.

Walter J. Travis, Mgr.

Nos. 52 and 54 New Street, New York.

"That stove," began the customer with deadly calmness, "you sold to me last week as an 'art stove,' I believe?"

"Yes," admitted the dealer. "Isn't it?"

"It doesn't know anything about art."

"Eh? What?"

"I say it doesn't know the first thing about art. I haven't tried it on painting yet, but it can't draw."—*Indianapolis Journal.*

Women and Wheels.

A writer in a journal of authority has this to say on the subject of bicycles for women: "There is absolutely nothing inconsistent with true modesty in women pursuing so healthful and pleasant an occupation as bicycling and in wearing the costume best suited to the exercise. The novelty may be startling to the representatives of Mrs. Grundy, who decry immodesty in whatever may be new to them. Bicycling can be made a craze and pushed to a harmful degree, as roller skating was, but that there is anything essentially opposed to modesty or purity in a woman enjoying the rapid motion and healthful exercise of a bicycle is ridiculous. The assertion simply illustrates the density of the conviction that whatever the individual making it is not accustomed to is all wrong. All ladies who have the time, means and disposition to ride the bicycle should do so, with moderation and with a mind conscious of the innocence of the pastime. There are a few amusements in which there is less danger of contamination to purity than in enjoying fresh air, hearty exercise and the sight of green fields by means of the bicycle."

A Call to Manufacturers.

The Manufacturers' Association of Cincinnati and Hamilton County, Ohio, have issued under date of November 14th the following call, which certainly should attract the attention of the Hardware manufacturers of the entire country:

The Manufacturers' Association of Cincinnati and Hamilton County, Ohio, desiring to promote the prosperity of the manufacturing interests of the entire country, and appreciating the importance of concerted action, hereby respectfully invites your organization to be represented at a Conference of Manufacturers which will be held in the city of Cincinnati, on the 22nd day of January, 1895, for the purpose of general interchange of views looking to the formation of a National Association of Manufacturers, which shall embrace among its purposes:

1st. The advocacy of carefully considered legislation to encourage manufacturing industries of all classes throughout the country.

2nd. The discussion of ways and means whereby trade relations between the United States and foreign countries may be developed and extended.

3rd. The establishment in South American capitals and other desired points, of permanent expositions for the display of American products.

4th. Such other topics as may be agreed upon by the convention.

It is desired that this convention shall be non-political, non-partisan and non-sectional.

The invitation hereby extended is without limit as to number of attendants, and is cordially extended not only to accredited delegates from organized exchanges, representing manufacturing interests, but to any individual manufacturer who may have the promotion of the general good by organized effort sufficiently at heart to be willing to meet with us.

The favor of reply, not later than December 1st, proximo, accompanied by suggestions, is respectfully requested.

W. T. Perkins,
F. Pentlarge,
Chas. F. Thompson,
H. C. Yeiser,
B. W Campbell.

Committee from the Manufacturers' Association of Cincinnati and Hamilton County, Ohio.

Cincinnati, Ohio, November 14, 1894.

In a Belgian gun shop, the tempering of tubes is effected in a room in which are two large gas fired tempering ovens. Those portions which do not require tempering are protected by a coating of prepared clay, while those requiring a special hardness are coated with prussiate of potash. The pieces are packed in boxes, in which they are embedded in carbonized leather waste, then the boxes are hermetically sealed, and placed in the oven. After the proper heat has been had, the pieces are taken out and steeped in oil.

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

A BELT BY ANY OTHER NAME WON'T WEAR AS WELL.

Cleveland Rubber Works

CLEVELAND, OHIO.

Legal Rights of Bicycle Riders.

The Supreme Court of Minnesota has decided that a bicycle has the same rights in the public streets that has a vehicle drawn by horses, and we suppose the decision includes men on horseback also. The question still remains, however, if it is not necessary that there shall be a similar warning of a bicycle's approach that there is of the contiguity of the older street occupants. The vicinity of the latter vehicles is announced by the noise they make. Some such notification is deemed necessary under our laws. This is illustrated by the traveling in winter by means of sleighs, when the snow is on the ground. There is a law operating then that compels the use of bells. But a sleigh without bells does not approach as noiselessly as a bicycle over our ordinary roads. It is worthy of consideration whether, in the greatly increased use of bicycles, it is not necessary for the public safety that bells should be attached to them to signal their presence to the public.—*Boston Herald.*

The Supreme Court of Minnesota has also recognized the bicycle as entitled to equal rights in the public highway with the horse and wagon. The case before it arose on a suit of damages brought against a bicyclist by a man whose horse had been frightened by the wheel, and who had been injured in the runaway. The court dismissed his suit and proceeds to say that the bicycle cannot be banished from the public highway simply because it is not an ancient vehicle and was not used in the Garden of Eden. This is in line with the decisions of other courts on the general subject.—*Springfield Republican.*

The Fall in Prices.

The AMERICAN GROCER, in its twenty-fifth year Anniversary Number, publishes the prices of leading articles of food compiled from its market reports for twenty-five years. The prices given are wholesale prices, and the changes are quite remarkable as illustrated by the following table:

	1869.	1894.
Flour, per bbl.	$6.62	$3.30
Sugar, " lb.	.13⅞	.04⅛
Coffee, " "	.15⅞	.18⅞
Tea, " "	.59	.20¾
Rice, " "	.06¼	.04⅛
Mess Beef, bbl.	11.41	8.19
Mess Pork, "	31.04	13.80
Lard, per lb.	.18½	.07⅝
Butter, " "	.25½	.25½
Cheese, " "	.14	.10⅛
Canned Tomatoes No. 3, doz.	2.10	.95
Canned Corn No. 2, "	2.75	.80
Canned Peaches No. 3, "	3.50	1.30
Canned Salmon No. 1, "	3.75	1.55

The only item which is higher now than in 1869 is coffee, and this article has, during the twenty-five years, fluctuated between 9.01 and 19 72 cents per pound. The coffee market is just emerging from a period of high prices and is now tending downward. Dairy products have also fluctuated largely and are now above a parity with other articles of food, but the tables of the AMERICAN GROCER which are given for each of the last twenty-five years illustrate quite as marked a tendency toward lower prices for nearly all varieties of food as is seen in other lines of production.

B. & W. SKATE SHARPENER.

——BEST SELLING IN THE MARKET.——

Handy to carry, does the best work, is made of malleable iron, full nickeled; the handsomest article of the kind on the market.

By its use the dullest pair of skates can be sharpened in five minutes, by any child old enough to skate.

In use, the side of the Sharpener forms a right angle with the file, making it practically impossible to file anything but a true plane on the skate, or to round the edges. As the file wears, it can be moved its full length on four sides, thus giving a great amount of filing surface. Put up one dozen in a box. Write for price.

HARDWARE

is growing in circulation and influence with every day that passes. Now is the time to subscribe!

Profitable to the Dealer, Indispensable to the Machinist and Engineer.

It is an absolutely pure, foliated, water-dressed and air-floated American graphite, from our own mines at Ticonderoga, N. Y. It has unrivaled smoothness and endurance. It is entirely inert, and not affected by heat, cold, steam, acid, or any known chemical. It largely increases the lubricating value of oils and greases. It may be mixed in water, oil or grease, or used dry.

Jos. Dixon Crucible Co., Jersey City, N. J.

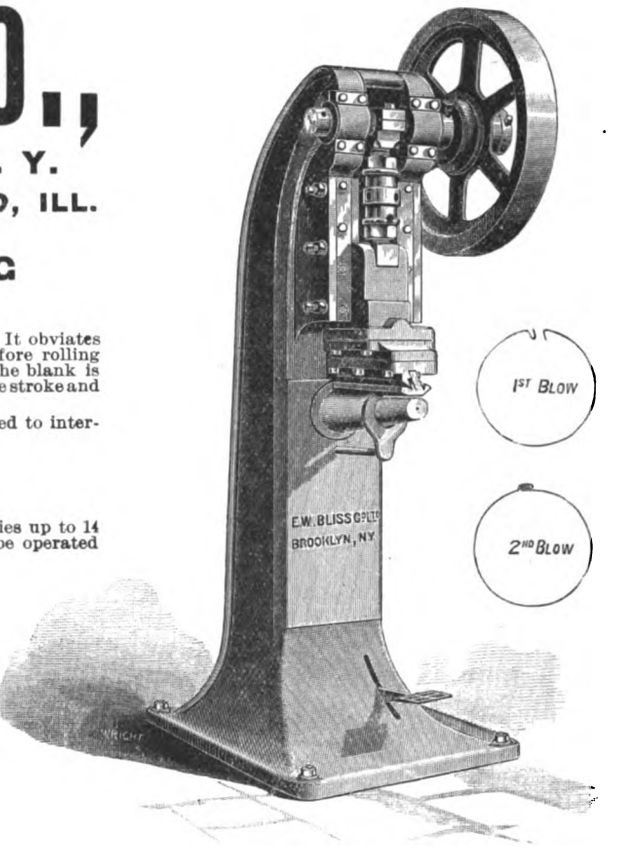
18 ADAMS STREET, BROOKLYN, N. Y.

100-104 W. Washington Street, CHICAGO, ILL.

DUPLEX FOLDING AND SEAMING MACHINE.

THIS machine is designed to facilitate the manufacture of lock-seamed tinware. It obviates the necessity of using a bar-folder for forming the hooks on the body blank before rolling same on the forming machine. Its operation is exceedingly simple and reliable. The blank is first formed in the rolls, then placed in the machine, which forms the two hooks at one stroke and closes them at a second operation. The advantages obtained are:



First—That the blank is rolled in the flat, not having any hooks previously formed to interfere with the operation.

Second—That both edges are hooked at one blow.

Third—That the hook forming and closing are done in one handling.

Fourth That the seam is more uniform than if started in the bar-folder.

The horn can be arranged to throw the seam inside or outside. All sizes of bodies up to 14 inches long can be done on the one horn. These horns and forces are not adapted to be operated in presses having more than ½ inch throw.

PRESSES, PUNCHES, SHEARS, DROP HAMMERS, DIES, SPECIAL MACHINERY, &c.

THE STILES & PARKER PRESS CO.

Geuder & Paeschke Mfg. Co.,

MANUFACTURERS OF

Tinware and Sheet Metal Goods.

St. Paul Ave. and 15th St.,

MILWAUKEE, WIS., Oct. 25, 1894.

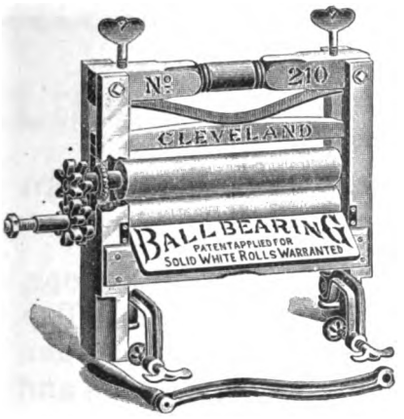
Gentlemen:

We frequently receive letters from good merchants asking for quotations on "Cream City Flour Bins and Sifters," and adding that they feel disposed to place an order with us, p ovided our price is as low or lower than they have been accustomed to paying for other makes.

While we appreciate the courtesy, which prompted the inquiry very much, and have no fault to find with the desire to purchase goods at the closest possible figure, we regret very much that we cannot meet the views of our friends, for the simple reason that we have never learned the art of giving a twenty dollar gold piece for $19.00 in currency.

Our Cream City Flour Bin is made of IX Tin, nicely japanned and ornamented, and has many points of excellence over others, which cannot fail to commend themselves to careful observers. They cost a trifle more, but will outlast three of the ordinary kind.

We furnish 500 elegant booklets free with an order for one dozen or over, and the advertisement you receive as a result, is alone worth more than the price of the bins.



Respectfully yours,

The Geuder & Paeschke Mfg. Co.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

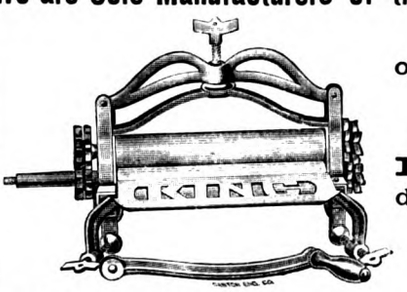
A Mistaken Notion.

It is a mistaken notion that a fine store in an eligible location, surrounded by attractive signs, is a superior advertisement; for the experience of the most enterprising merchants is that it pays better to spend less in rent and more on advertising.



There is a Better Profit

To the dealer in this Wringer than in any other, and he can sell MORE OF THEM. Each one sold helps to sell more. Try it and see.

Digitized by Google

No Disagreeable Odor. No Ashes Light and Heat in Abundance.

No. 327. No. 3 Lift Burner.
Height, 32½ inches. Spread of Base, 12½ inches. Nickel Finish.

THE MILLER OIL HEATERS.

Just the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

They are an Assured Success, from the fact that the Lamps used are "The Miller Lamps" THE LATEST AND BEST.

IN THESE HEATERS YOU HAVE A HAPPY COMBINATION:

The Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGER MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

A MOST IMPORTANT FEATURE.

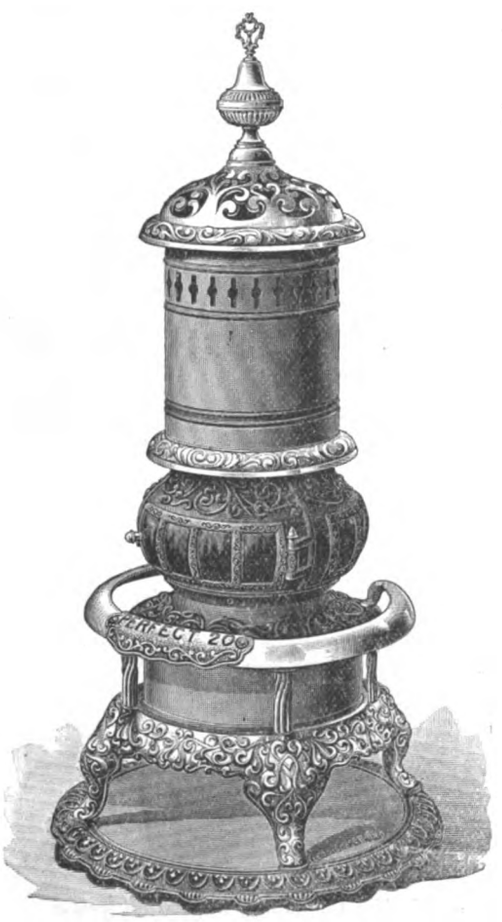
☞All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

MANUFACTURED BY



EDWARD MILLER & CO., MERIDEN, CONN., United States of America.

STAMFORD CONN.

NEW YORK. CHICAGO. PHILADELPHIA. BOSTON. PITTSBURG. SAN FRANCISCO.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Help Wanted.

A MANUFACTURER of high grade pen knives, scissors, razors, etc., desires to correspond with six first-class Hardware or cutlery salesmen of unquestioned ability to represent him after January 1st. The line comprises the handsomest as well as the most complete of any line on the market. Unexceptional opportunity for really first class men. Address in confidence, stating fully for whom you traveled how long, and territory covered. Hustler, care HARDWARE, No 143 Chambers Street, New York.

HARDWARE and Cutlery salesman for New York City and vicinity; also salesman for New York and New Jersey. Address H. J. C. & Co., care HARDWARE, 143 Chambers Street, New York.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Situations Wanted.

WANTED, by a young married man, twenty six years of age, position in wholesale or retail Hardware store. Experienced. Best of references. Address O. L. Barber, Tupper Lake, Franklin County, N. Y.

WANTED position as Hardware salesman, Builders' Hardware especially. Have had several years' experience in a first-class house. First-class references. Address Frederick J. Schwarz, No. 2 Willow Street, Brooklyn, N. Y.

A1 CUTLERY salesman with New England, Middle Atlantic States and local trade, wants situation at once. Is also Hardwareman. Address Traveler, care HARDWARE, No. 143 Chambers Street, New York.

A PRACTICAL designer and model maker, who has some original ideas that he wishes to make practical use of, would like a position with some company or firm who are open to business of that character. Address Model, care HARDWARE, No. 143 Chambers Street, New York City.

A PLUMBER. Fully experienced and competent; capable to take charge; quick workman; moderate wages; city or country. H. Webber, care of S Fullerton, No. 228 Chrystie Street, New York City.

AN experienced traveling man desires position with manufacturing concern to represent them in one or more large cities. Best of reference. Address A. J., care HARDWARE, No. 143 Chambers Street, New York.

AN experienced salesman in shelf, heavy and carriage Hardware, desires a situation. Can furnish best of references. Has an established trade. Address L., care HARDWARE, No. 143 Chambers Street, New York.

Agencies for Hardware Specialties Wanted.

TO Hardware Manufacturers and Importers: I want to handle on commission, in Chicago and vicinity, Hardware and house-furnishing specialties. Am a hard worker, and am well acquainted with the jobbing and retail trade. Good references. Address Energy, care HARDWARE, No. 143 Chambers Street, New York.

A BUSINESS man and salesman of twenty-five years' experience, capable and reliable, desires a manufacturers' agency—either Hardware specialties, supplies for gas, steam, water and oil, or a line of house-furnishing goods for domestic and export trade. Highest reference, given. Address Wallace, care HARDWARE, No. 143 Chambers Streets New York.

ARE you represented in Rochester, N. Y., a prosperous, wealthy growing city of 150,000, and the trading and manufacturing centre of a large section of the State? A gentleman of many years' business experience, of good judgment and well posted in commercial law, desires to represent a manufacturing, wholesale or jobbing house. Address P.O. Box 165, Clarkson, N. Y.

AN experienced salesman with extensive acquaintance among the larger buyers of builders' Hardware, calling frequently on the trade in Philadelphia, Pittsburg, Baltimore and Boston, and having office in New York City as agent for a first-class manufacturer, is anxious to represent an additional company. Address W. H. E., care HARDWARE, No. 143 Chambers Street, New York.

A **HARDWARE commission house** of New York City, centrally located, with ample room for samples and stock, and abundance of capital to carry out any agreement or contract which they may enter into, wish to **negotiate with manufacturers of staple lines of Hardware or specialties.** For further particulars, address Commission, care HARDWARE, No. 143 Chambers Street, New York.

Side Lines Wanted.

WANTED by traveling man, long experience in New York State and Pennsylvania, Hardware specialty as side line, which will pay well for good work. Address Traveler, New Osborne House, Rochester, N.Y.

TRAVELING salesman wants A1 specialties or to represent a manufacturer or a line of goods in New England. H. Hayden, No. 667 Salem Street, Maplewood, Mass.

Side Lines Offered.

WANTED—Traveling salesmen, to solicit the retail trade on a staple line of washing machines, of high grade. Liberal commissions to parties with good references. Horton Mfg. Co., Fort Wayne, Ind.

EXPERIENCED salesmen wanted to sell the best garden tool on the market Sells to Hardware and implement houses; States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio; also for New England States. Address Lock Box 545, Rock Falls, Ill.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No. 115 North Vine Street, Hazleton, Pa.

For Sale.

A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.

Law and Collections.

PLACE your Chicago Collections and *legal business* with SAYLER & FRAZER, Attorneys-at-Law, 171 La Salle Street (N. Y. Life Building), Chicago, Ill.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 29 Murray Street, New York City.

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be **the very best.**

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made **Smokeless Schultze Powder famous** all over the world, while its **hard flinty grain** and specially regulated moisture makes loading so easy that any amateur can now do so successfully.

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U.S. Agents

Von Lengerke & Detmold, 8 Murray St, New York.

1895

Columbia Bicycles, $100.
Hartford Bicycles, $80.
Wizards, $60, $50.

The above will unquestionably be the easiest line of bicycles to sell in 1895, and the dealer who has the exclusive Columbia agency for his vicinity will be fortunate. We invite correspondence with enterprising firms of good standing.

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

MERK CHRISTMAS TREE HOLDER!

PATENTED SEPTEMBER 1st, 1891.

BUY THE BEST!

Christmas Comes But Once a Year.

If you want to make your home pleasant and cheerful during the holidays BUY A MERK CHRISTMAS TREE HOLDER, made of iron, neatly finished in gold bronze, a great improvement over any heretofore made. By an ingenious contrivance the tree is held secure by strong arms which extend upward from the main body of the receptacle in which it is placed. If desired the tree can be revolved. Sample tree holders sent by express prepaid upon receipt of **$1.** Packed in quarter and half dozen crates for shipment. Manufactured and sold only by the **ALLENTOWN HARDWARE WORKS,** ALLENTOWN, PA.

☞ SOMETHING NEW. Hardware dealers and others are requested to write for descriptive circulars and wholesale prices.

Hard rubber, vulcanite, gutta percha, or any form of vulcanized rubber can be expeditiously and quickly turned up in a lathe, using a coarse mounted stone on the slide rest of the lathe, in the usual manner. A light chip must be taken, but the lathe can be run at a good speed, and thus a considerable amount of work can be accomplished in a day's time.

The Canals: Business Methods or Political Methods?

The people of the State of New York at the recent election showed their interest in and partiality for the State canals, by giving the canal amendment providing for their extensive improvement, an overwhelming majority. This was attained notwithstanding the fact that one of the leading political parties repudiated all the amendments. This intelligent discrimination by the people should be borne in mind by Governor-elect Morton and the party soon to be in control.

The canals lifted this city and State from a position of inferior importance in population, commerce, manufactures and wealth to that of first in the country. The canals are to-day of as much importance as ever before in retaining our preeminence; indeed they are essential to the preservation of our supremacy.

It requires but little investigation to ascertain that, without the canals, the railroads would be unable to hold the trade and commerce to New York, or sustain our manufacturing interests, which have made it what it is, and upon which it now thrives. Without the canals in summer, the preponderating volume of trade that is attracted to this city and through this State by the cheap transportation they afford, would be divided among the competing cities of Philadelphia, Baltimore, Newport News and Boston, as it is now divided during the winter months when our canals are closed.

Should this trade be so divided,—and without the canals, nothing could prevent such division,—our city would in that respect sink in importance in relation to her competitors more favored by cheaper railroad transportation.

This emphasizes the importance of placing our canals under a thorough business management, that would compare favorably with the methods of managing our great railroads—a purely business management as distinguished from that which has been too much in evidence of late, viz.: the political.

The office of Superintendent of Public Works is one of the most important in its relation to the greatest commercial factor within the State—the canals. It is a position that should be filled upon considerations of fitness only, and no man regarding whose personal qualifications there is the slightest doubt should be named. The commercial organizations of the State, and business interests, and especially those which for many years past have been known as the active friends of the canals, should be consulted before any man is named. Governor Morton will fail to give satisfaction to the great mass of the people of this State, if in consultation with one or more of the political leaders he shall decide upon a man to fill this important office. We do not wish to take the position of advising the Governor-elect, but, it seems to us that if he desires to find the best man he will place himself in communication with the commercial organizations, and especially with friends of the canal, the Canal Union, which represents all the commercial bodies, and after full hearing, decide this matter, and not until then.

This freight question is certainly one in which the Hardwareman has an interest.

The Bicycle Season Just at Hand.

It is hardly necessary to make an apology for the considerable bicycle information contained in this issue. It is at this season of the year that the bicycle manufacturers are making their announcements for the coming season, and as this line of goods has become a prominent and per-

Digitized by Google

manent one in the Hardware trade, we feel it our duty, as an exponent of that trade, to lay before our readers such information bearing upon the prospects and prices of 1895 as may be possible. The manufacturers have been very prompt and courteous in extending us all the information which they were prepared to give the trade, and in this issue, and in those just preceding, we feel that the main portion of the field has been thoroughly covered. Other and later announcements, however, will appear from time to time. It is hardly necessary for us at this late date to make further argument to show the Hardwareman that it is to his advantage to secure a line of bicycles at as early a date as possible, and to identify himself with that trade before independent houses have taken possession of his legitimate territory. All that is necessary to prove the truth of this assertion, is to cite the example of hundreds of Hardwaremen in all parts of the country, who have proven the advantages to be derived from this line of trade. It is not necessary that the dealer should be located in a city, or even in the large country towns, to make sure of a steady sale in this line of goods.

A curious illustrative fact recently came into the possession of the writer of this. In a small country town, in an out-of-the-way corner of Ohio, he found sixty or more wheels in constant use, the greater portion of them having been purchased from a local Hardwareman in that vicinity. In addition to the first sale of the wheel itself, this dealer was constantly selling bicycle parts, lanterns, package carriers, wrenches, etc., and confessed that he had made more during the year from the sale of that line of goods, than from his entire old-time Hardware trade.

This fact speaks volumes, and is an argument to which there is no answer. It also illustrates in some faint degree, the hold the bicycles have taken upon the American public, and is a guarantee of its permanency. Multiply that little country town by the hundreds of thousands of such towns in the United States, and we have an answer to that recurring question, "Where do all the Bicycles go to?"

Elsewhere in this issue mention is made of the fact that preparations are already in hand for the Annual Dinner of the Hardware trade, which will be held some time in the early days of 1895. It will be remembered that the dinner of 1894 was very properly omitted because of the hard times which were then existing, and it should be now the ambition of the trade to make the present dinner so successful, that it will partake not only of the character of a general reunion of the trade, but also a feast of thanksgiving for the better times which are at hand, and which already are brightening the holiday season of the year.

S. L. Allen & Co., No. 1107 Market Street, Philadelphia, inform us that in order to accommodate their trade in Flexible Flyers, Flyer Sleighs, Flyer Coasters, between now and January 1st, they have arranged to carry stock for their own account in New York city and in Milwaukee, Wis. They would be glad to give the names of their correspondents in those cities to any parties who can use this stock to advantage.

Sargent & Co., New York, and New Haven, Conn., have issued a large and comprehensive catalogue of their line of Hardware supplies. It is copiously illustrated, and contains about everything that can be imagined possible under the name which the catalogue bears.

The Manchester, Va., spike works, which have been shut down for a year, resumed operation with a full force of hands on December 4th.

National Convention of Manufacturers.

Mention was made in a recent issue of HARDWARE of a movement set on foot for a national convention of manufacturers, the initial step of which was taken by the Manufacturers' Association of Cincinnati and Hamilton County, Ohio. In many cases it was found that the associations could not respond until after the annual meetings had been held, and accordingly it was decided to issue a second call, in which would be embodied the results so far obtained by the committee. In this second circular letter the following questions will be asked:

1. Do you favor the formation of a National Association of Manufacturers?

2. Will you be represented at the conference in Cincinnati, Ohio, January 22, 1895?

3. How many delegates will you send? If possible, will you name them?

The letter outlines the plans for the convention, assures the manufacturers that reduced fares are being actively negotiated for, and is accompanied with a list of firms, corporations and organizations that have expressed interest in the matter.

At a recent meeting of the board of directors of the National Board of Trade of Cycle Manufacturers, it was decided that at the annual national cycle show, to be held at Madison Square Garden, New York, in January, the spaces should be devoted exclusively to tne manufacturers of bicycles, and bicycle accessories and sundries; that no space should be sold for exhibition purposes, or any signs or decorations allowed upon them. The management will furnish an official programme, which will contain a list of exhibitors and the numbers of spaces occupied by them, and this will be distributed gratis, and no advertisement will appear thereon. The resignation of H. A. Lozier, of the executive committee, was accepted, and Joseph McKee, of McKee & Harrington, was elected to the vacancy. The programme for the first annual convention of the national board, which is to be held in the concert hall of the Madison Square Garden in January, 1895, has been arranged as follows: Convention to be called to order Tuesday, January 22nd. Wednesday, January 23rd, reports of committees. Thursday, January 24th, general business; election of officers for ensuing year. Friday, January 25th, installation of officers, and unfinished business.

The Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York City, have perfected what is described as "one of the most remarkable Rotary Brushing Machines ever invented," and will be ready to place the same on the market on January 1, 1895. They will also have a new Rotary Horse Clipping Knife, which they believe "will clip more closely and rapidly than any other heretofore made." Parties desiring anything in this line will receive full particulars on making application to the above named company.

Elsewhere in this issue the Ulrich Mfg. Co., Rock Falls, Ill., call attention to their well known Osborne Hand Cultivator, an article which they are sure will attract instant and constant sale if shown in the various stores of the Hardware trade. The success which has attended this farming tool, is a guarantee that there is a field for it, and the company above named would be pleased to give particulars and prices, etc., to those who may be interested.

The Ansonia Brass & Copper Co., Ansonia, Conn., are making extensive improvements in their brass mill. The several small buildings which have been erected from time to time as room was needed, are to be enclosed in a substantial iron and brick structure, and when the latter is completed, the small buildings will be torn down, thus making one great plant. Larger engines will replace the two now used to furnish them with power.

Jacob W. Voorhis, doing business as J. W. Voorhis & Co., Hardware dealer, No. 26 Warren Street, New York, has assigned to Bernhard Ginsberg.

Hardware Club Notes.

At a meeting of the Board of Governors, of the New York Hardware Club, on December 3d, the following gentlemen were unanimously elected to membership in the Club:

Thomas H. Cochran, No. 156 Sand Street, Brooklyn.

William T. Norton, First Vice-President American Axe & Tool Co., No. 253 Broadway.

Charlas William Mackey, President American Axe & Tool Co., No. 253 Broadway.

Frank J. Oliver, Oliver Bros.; No. 118 Chambers Street.

Oliver A. Marsh, No. 3 Park Place.

John A. Hill, editor *Locomotive Engineering*, No. 256 Broadway.

G. W. Blanchard, Chicago, Ill.

Clarence H. Mackey, No. 253 Broadway.

L. C. Dessar, No. 261 Broadway.

Robert N. Brundage, No. 27 Park Row.

Edward Stagg, Patterson Bros.; No. 27 Park Row.

Theodore Smith, New Britain, Conn.

Frederick Haviland, No. 29 Barclay Street.

Frederick T. Browning, American Wringer Co.; No. 99 Chambers Street.

Carl T. W. Bawo, No. 30 Barclay Street.

F. H. Bawo, No. 30 Barclay Street.

F. J. Root, president New York Wire Cloth Co., No. 102 Chambers Street.

W. C. Beecher, No. 237 Broadway.

Daniel F. Cahalan, No. 271 Broadway.

Gustave Vantschager, No. 87 North Moore Street.

This makes a total of 519 members of the Club, all of, whom with the exception of some 75, are resident members.

At a meeting of the Board of Governors of the New York Hardware Club, on December 3d, Thos. F. Keating gave the following notice, which was placed upon the record, and ordered posted upon the bulletin board:

To the Secretary: I hereby give notice that at the next annual meeting I will move that the admission for resident members be raised to $100, instead of $50, as now existing.

THOS. F. KEATING.

December 3, 1894.

William H. Williams, President of the Hardware Club, was recently honored with an invitation to the famous dinner given by the Home Market Club, of Boston, Mass., to the Hon. Thos. B. Reed and others. Mr. Williams, who is a staunch Republican, was compelled, greatly to his regret, to decline the invitation, because of his business engagements.

The Annual Hardware Dinner of 1895 is well under way, and at a recent meeting of the Board of Governors of the Hardware Club, a committee consisting of the following gentlemen were appointed to take charge of all the arrangements connected therewith:

A. D. Clinch, Chairman.

Eugene Bissell, E. C. Van Glahn, J. L. Varick, Sub-Committee on Menu, Rooms, etc.

Brace Hayden, R. R. Williams, J. H. Kennedy, W. R. Walkley, Sub-Committee on Speakers and Toasts.

Peter McCartee, Sub-Committee on Reception.

Mr. McCartee is empowered by the president to add to his numbers, but being a host himself, it will doubtless not be necsary.

The Uses of Aluminum.

EDITOR HARDWARE: There has been so much said and written about aluminum recently, that one would think the subject well-nigh exhausted; yet, perhaps, from a manufacturing standpoint no metal just now deserves more notice than it, especially when we take into account the fact that it ranks first among metals in quantity and extent of distribution, one-twelfth of the earth's crust being composed thereof. It is tenacious, malleable, ductile, and does not readily oxidize. It is certainly worthy of attention, when we take into consideration the diverse, as well as the diametrically opposite, ways into which it can be manufactured. Like iron, it can be made into many useful cooking utensils, such as coffee pots, saucepans, dishpans and a number of others of a similar nature. Things of this character made from aluminum have many advantages, some of which are that the metal is entirely free from poison; the food cooks quickly without burning, and the utensils are very light, aluminum being nearly three times lighter than iron and three and a half times lighter than copper. There are a few things that attack it, but which are not met with in cooking; caustic alkalies consume aluminum rapidly, muriatic acid slowly, and nitric acid only at a high temperature. The Hardware merchant not only keeps the above ware, but can sell you hinges, bells, keys, locks, bolts and many things in the electrical line.

Then again, like gold and silver, it is worked into many things that are ornamental, for at any jeweler's can be seen napkin-rings, watch-chains, match-safes, stick-pins, hair-pins, toothpicks, lockets with stones set in them, and a hundred and one other trinkets, too numerous to mention. The optician uses it in many ways, especially in the making of opera-glasses, and even the painter has a powder which, when mixed, gives a silver-like lustre.

Owing to its lightness, the dentist uses it to take the place of gold in making the plates for artificial teeth and in the capping of teeth. One of the finest alloys is aluminum bronze, which has the color of gold and is capable of taking a high polish; it has the tenacity of steel, and from which very fine castings can be made, and is composed of ninety per cent. copper and ten per cent. aluminum. Many military accoutrements are made from it, owing to lightness and strength. So it can be readily seen that while, at the present time, aluminum is used by such businesses as are not closely connected, yet as its production is gradually being diminished in the way of cost, so its benefits are being just so gradually recognized by others who, but a short time before, could see no good in aluminum from a commercial basis.

W. A. M.

Newark, N. J., December 4, 1894.

The Bell Eave Trough Hanger.

John W. Bell & Co., Mercer, Pa., have met with no small degree of success in the introduction of the Bell Eave Trough Hanger, for use on wooden roofs. This Hanger was patented in 1885, and is made of one piece of heavy galvanized wire, which the makers say will not corrode, nor permit the trough to rust. This Hanger can be put on the trough and fastened while on the ground, and when the trough is elevated to its place, the Hanger can be bent and adjusted to the pitch of the roof, so as to give the trough the proper fall. They further explain that the Hanger forms a complete brace and support to the trough and holds it in shape as well as in place. The makers would be pleased to send a description in detail, with prices, etc., to anyone who may be interested. They also manufacture a line of Staple Hooks, made of a superior quality of steel wire, and "warranted to drive into any material into which a wire spike can be driven."

The New Jersey Car Spring & Rubber Co., Jersey City, N. J. are making a new line of Garden Hose which, while "a new method" of Garden Hose, is not in any sense an experiment, as they have used the same quality of duck and the same style of construction in their fire hose, with excellent results. They call this "New Method," and make it in four and five-ply, and of a special high grade of duck, warranted to stand five hundred pounds pressure. They claim that it is "excellent in material, perfect in construction, correct in principle, phenomenal in strength and reasonable in price." They would be pleased to have dealers write for samples and prices, and also state that they have now ready a full line of samples of first-class goods for 1895.

The John H. Thomas Mfg. Co., Piqua, Ohio, have issued a little leaflet illustrating and describing the Thomas Automatic Weather Strip, the success of which has certainly demonstrated that it must be a first-class article, and that there is a field in the trade for the same.

Bicycles For 1895.—III.

WHAT THE MAKERS SAY AS TO OUTPUT, IMPROVEMENTS AND PRICES.

A VARIETY OF ANNOUNCEMENTS, OPINIONS AND CHANGES.—INFORMATION OF VALUE TO THE HARDWARE TRADE.

Julius Andrae, Milwaukee, Wis.: We beg to submit to your notice the following announcement in regard to our 1895 line of models, in answer to your inquiry of a late date:

Light Roadster Safety, fitted regular with 1⅛ M. & W. tires and wood rims; weight complete, 24 pounds. Price, $100.

Andrae Road Racer, fitted with 1¼ M. & W. tires and wood rims; weight complete, 21½ pounds. Price, $100.

Lady Andrae, fitted with 1¼ inch M. & W. tires and wood rims; weight complete, 22 pounds. Price, $100.

The Andrae Racer, fitted with 1¼ inch M. & W. tires and wood rims; weight complete, 18 pounds. Price, $100.

All diamond frame machines will be furnished in three sizes, 21, 23 and 25 inch. Drop frames will be furnished in two sizes, 19 and 23 inch.

The prospects for the coming season in this line are decidedly encouraging, and we expect to double our output. The same correct lines which have distinguished our wheels heretofore, will be found in our 1895 models, but of a more improved and up-to-date pattern. There will always be riders who demand the best, and it is this trade for which we are striving.

In addition to the "Andrae" Cycles, we will introduce our "Sunbeam" line, which will consist of the following thoroughly reliable medium grade wheels:

No. 19 and 20	28	inch	Diamond	and	Drop	frame	.....	$75.00
" 17 " 18	28	"	"	"	"	"	.....	60.00
" 11 " 12	28	"	"	"	"	"	.....	50.00
" 13 " 14	24	"	"	"	"	"	.....	40.00

We shall also continue the manufacture of our Sunbeam Chain Lubricant, which has gained for itself such a wide reputation. We are anxious to have dealers list this in their catalogue, and electrotypes will be mailed free on application. We shall exhibit at the National Cycle Show at Chicago, and will be pleased to have our line inspected.

THE "WAVERLEY" AND 1895.

Indiana Bicycle Co., Indianapolis, Ind.: "Our prices for 1895 are $85 for the gentleman's Scorcher, fitted with wood rims, 22 pounds, or steel rims and G. & J. tires, 25 pounds, and for the lady's machine, same choice of tires and weights, $75. We are making calculations to build 25,000 machines for the 1895 trade, about one-third of which are ready to be assembled at the present time. We shall continue the same policy of selling direct to the retailer, giving exclusive territory and protecting our agents against the cutting of prices. We enclose herewith Waverly Greeting, which will appear in our 1895 catalogue."

The following extracts are from the "Greeting" above referred to: "Ever since the manufacture of bicycles began in America, there has been a continual demand for a strictly high grade machine at prices not to exceed two-thirds of that asked by the high grade makers already in the field, and when we undertook, two years ago, to furnish a wheel to supply this popular demand, our goods were, at first, looked upon with some suspicion. Riders and dealers alike said, 'Why, how is it possible for you to give us this thing while the old makers claim they cannot do it?' Dealers by the hundred wrote in and complimented us on the elegant appearance of the Waverley, 'but, said they, 'we are afraid it is too good to be true.' Time, however, has erased the last signs of suspicion from their minds. The Waverley has gone through the seasons of 1893 and 1894 leaving a proud and honorable record. We believe from what our agents tell us, who handle all of the other makes as well as ours, that there has been less breakage or trouble reported from the use of the Waverley than from any other high grade machine sold in America. We have continually received letters of praise from our agents, in which they stated that although our wheel was listed and sold at from $40 to $65 below those of other high grade makers, they gave far better satisfaction and caused much less trouble than any line they ever handled, regardless of price. The name 'Waverley' has become a synonym of the term 'high grade.' Every wheelman has a good word for it, because they respect our efforts to supply a machine of such superior grade at the greatly reduced price, while every manufacturer calmly takes his hat off and acknowledges the merits of the Waverley by reducing his own list prices to within a reasonable distance of ours. They cannot meet us and maintain as high a standard because of our unusual facilities for the production of strictly high grade machines."

THE WARWICK WHEELS.

Warwick Cycle Mfg. Co., Springfield, Mass.: "We are pleased to state that our policy for the season of 1895 is in accord with the prevailing demand for lower prices. We only need to remind you that the entire product of the Warwick factory is high grade in every particular, and to give absolute assurance that this high standard of quality will be rigidly maintained in every future model. In consequence of the largely increased demand for Warwick Cycles, and the resulting decreased expense of marketing the same, we deem it only just and in accord with good business policy to give the public the advantage of lower prices. In this connection we beg to state that our 1895 models are of entirely new design, and that the prices announced in this letter apply exclusively to these models, and will go into effect January 1, 1895, at which time the wheels will be ready for delivery. Our 1894 product has been disposed of, and we have no wheels to offer at the new prices until the latest models shall be ready for the market.

"We give below a brief outline of models, weights and priees:

Model 21	Roadster, High	frame,	28	inch	wheels,	20	pounds...	$100 00
" 22	Ladies', Drop	"	28	"	"	23	" ...	100.00
" 23	Roadster, Low	"	28	"	"	20	" ...	100 00
" 24	Ladies', Diamond	"	28	"	"	20	" ...	100.00
" 25	Roadster,		28	"	"	25	" ...	80.00
" 26	Ladies', Drop	"	28	"	"	27	" ...	80.00
" 27	Racer,	26 or 28	"	"	"	17	" ...	125.00

"We shall soon publish fuller descriptions of the new models, and our 1895 catalogue will be issued at an early date."

THE MARION CYCLE CO.

Marion Cycle Co., Marion, Ind.: "Your favor of the 27th received. Our lines for next year will comprise our Halladay-Temple Scorcher line, in weights from 18 pounds to 24 pounds, in both lady's and gentleman's in three heights of frames; also a medium grade machine for gentlemen only. Our H. T, S. line will list at $100 and $125; $125 being for extremely light wheels. Our medium machine grade will list at $85."

W. W. Pryor & Co.'s New Connection.

W. W. Pryor & Co., No. 81 Chambers Street, New York, have completed arrangements with J. Stortz & Son, Philadelphia, Pa., as sole agents for their line of goods in the East, and will carry stock in New York city, to supply immediate demands from the trade. Stortz & Son manufacture lines of tools for mechanics, plumbers, tinsmiths, painters, weavers, cigarmakers, butchers, upholsterers and masons, besides many Hardware and house-furnishing specialties, including oyster, bread, cheese, farrier and butcher knives, box hooks, and scrapers, calking irons, mallets, and many articles used by ship chandlers. Samples can be seen and the trade supplied at the New York office.

The W. J. Healey Hardware Co., dealers in shelf and heavy Hardware, etc., Mitchell, S. D., announce under date of November 20th: "We are about to commence wholesaling Hardware, and invite the correspondence of manufacturers of shelf and heavy Hardware, iron and wood stock, wood and iron pumps, rope and cordage, ammunition, sporting goods, etc., who desire to enter into profitable trade connections in this State. Mitchell is one of the best railroad centres of the State and we anticipate a large business." W. J. Healey Hardware Co., successors to Booth Bros.

The Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York, are sending their friends a finely illustrated circular which shows in detail their well-known line of goods. Prices, etc., are given.

The Warwood Tool Works, Wheeling, W. Va., have been moving within the past two weeks from their late location to their new works, Twenty-ninth and Chapline Streets.

Porter to Partnership.—II.

THE PROGRESS OF A CLERK WHO WAS NOT AFRAID OF WORK.

I began my second year with my employer feeling well towards me, but with the envy of the older clerk against me. Harry had been two years longer with Mr. Ely than I had, and had always been the favorite, but he thought he saw in me a rival, and he began to show his ill will against me in numberless little ways. When I first came to the store Mr. Ely had said that I was to obey Harry, and he consequently had the power to annoy me as much as he wished. Of course I understood that we were in a great measure in competition for the same end, and it was impossible that two ambitious boys could be anything else. We both had our ways to make in life, and we both saw that the first step was to win favor with Mr. Ely.

In every store where there are two or more clerks, it is inevitable that there should be some clashing among them, but the moment one turns from his legitimate work to try to damage a competing clerk, just that moment he begins to fall out of the race.

I determined to have no quarrels and make no complaints, but I was bound to go on my own way and trust to faith for the end. I was anxious to learn bookkeeping, but Harry kept me away from the books as much as he could. Just as sure as I went to the desk he called me to do something in the store. But where there is a will there is a way. One day there was but little doing in the store, and Mr. Ely was doing nothing, so I went up to him and asked if he was willing that I should look over the books so as to learn bookkeeping. He said he was not only willing but glad to have me, and if I wanted any help he would give it to me.

The lesson he gave me that day is still fresh in my mind, and I have used it a great many times with my own clerks.

Turning to a book on the desk, he said: "This, Mark, is my day-book—in it are recorded the transactions of each day, just as they happened; you see here is the bill sold Mrs. Smith, there is the one sold Brown, and so on; this is the most important book in the store. If I should sue a customer this would be the book to take to court; this is what is called the original entry. All the other books are copied from this, and hence are liable to mistakes being made, but here is the entry made while the transaction is fresh, and to the correctness of this men are usually willing to swear. Now if there was no other book but this it would make it a tedious task to gather together a man's bills, supposing he had a long account; you would have to begin at the beginning of the book and scan each page closely to find every item against him, and you would have to go through this work every time you wanted to see how much his account was. So we have ledgers—here is mine. I take a page and head it John Smith, say; then I look through the day-book from the beginning, and whenever I find a bill against Smith I write the amount here—'posting' we call it—until I have all the bills against him on this page here. Then if he wants to pay, or I want to see how much he owes me, I have only to turn to this page and foot up the bills. These two books are all that are absolutely necessary to carry on business, but no merchant feels like taking in and paying out money without having a special cash account; this may be in the ledger or in a separate book; here is my cash book; on one page is the cash we get in, on the other the cash paid out; footing up these two pages and subtracting one from the other shows the amount of cash on hand. If I didn't have this cash book when anyone paid me I would have to credit him the amount on the day-book, but instead of that I credit it here and then post direct from the cash book to the ledger. In keeping books by single entry as I do these three are all I need; they show me what I buy and sell, how much I owe and what is due to me, and this is all I want of books. There is no secret about them, and I advise you to get the run of them early."

I needed no second urging; I sat down to the books and studied them and followed the entries and postings until I got the hang of it. Those of us who are old at the business and who handle a set of double entry books as easily as we recite the multiplication table have forgotten how much of glory there is to a boy in mastering so simple a thing as single entry bookkeeping, but it is one of the many steps made between boyhood and business.

Soon after this I gained another step in life. One morning, in sweeping out the store, I found a twenty-dollar bill under the stool before the dress goods counter. My first move was to call out to Harry, but he wasn't down yet. I put it in my pocket and went on sweeping. No sooner was it snugly in my pocket than something began to tempt me to keep it and say nothing; whoever had lost it would not know whether they had lost it in our store or not, and of course if I said I had not found such a bill they would go looking elsewhere for it. I wanted some new clothes the worst way; three or four of my cronies had lately come out in new suits and I wanted to look as well as they did, but mother had need of the money and could not get me any clothes just then, and there was a book just out I especially wanted to get, for I was a lover of books, but no means of gratifying my taste; I could see a score of ways where I could spend the twenty dollars to advantage and no one be any the wiser. But there was another side. Would it be right? Just then Mr. Ely came in and without waiting a moment I pulled the bill out of my pocket and gave it to him, telling him where I had found it. I was happier the moment it was out of my hands.

"We will hear from it," said he, and it was not long till Mrs. May came in and claimed it. Mr. May was the leading lawyer of the town and a brother-in-law of Mrs. Ely's. Mr. May was very gracious to me and offered me two dollars, which, however, I refused to accept. Somehow I fancied after the wicked thoughts the money put in my head I would be punishing myself properly not to accept any reward. But a few days afterwards Mr. May left a package in the store for me, and in that were two volumes giving the autobiography of Benjamin Franklin, and a note to me saying Mr. Ely had said I was fond of books and that he and Mrs. May would be glad if I used his library freely. There may be boys who read this that think this latter offer was not of much consequence, but I did not think so. I was anxious to educate myself and delighted to read, and I look back to that library as being one of the important stepping stones in my life.

A Straw Stove.

Information comes from the far West that much suffering from cold may be averted by the knowledge of how to construct such a stove as is used largely in Dakota. The stove saves the purchasing of fuel, and can be used in any district where straw or hay is plentiful. The device can be made by any tinsmith. A drum is constructed of sheet or stove-pipe iron, two feet in diameter and four feet, or more, high. This is placed on a stand, which may be roughly and inexpensively made, with a top of sheet iron, rimmed to hold the drum in place. The legs are of hoop iron riveted. The top of the stove is cone-shaped, sliding into the stove-pipe just tightly enough to insure the carrying away of the smoke, and yet to enable the drum to be removed for the purpose of emptying and replenishing. The draught is a hole at the lower part of the drum, with a sliding door by which the draught can be regulated. The drum should be filled with straw, hay or any material of like nature, and the fire is started at the top. One filling will last about six hours. The introduction of this stove into Dakota is said to have been a veritable godsend, and it is so cheaply and easily made that there is nothing to prevent its use in many districts throughout the country where the price of coal is too high for slender purses.

Information comes from Pittsburg, Pa., that the Pittsburg Reduction Co. will begin making aluminum for the market in their new plant on or about January 1st. The company have been steadily at work fitting up huge buildings with the necessary machinery, including a great crane of ten tons capacity and a fifty foot span, which will be operated by hand and can be worked remarkably easy. There are six electrical transformers, which will be placed in their own transformer building for the purpose of reducing the current of electricity to the proper voltage, to accomplish the work it is intended for

The Chicago Cycle Exhibition.

The Cycle Exhibition to be held in Chicago in January, 7th to 12th, 1895, is a matter in which the readers of this paper should take an active interest. There are a great many firms in the Hardware business who have taken up the bicycle business as a side issue, and have found it very profitable. Bicycle makers have come to recognize the Hardwaremen as among their best customers. The bicycle business, however, is one into which it will not do to plunge blindly, and the man who contemplates adding bicycles as a side line, will do well to thoroughly investigate the subject before making a definite move. This investigation can be made nowhere so well as at a Cycle Show, where every make of bicycle is on exhibition, as well as the different tires and accessories that are necessary in the business.

This Cycle Show is being held under the auspices of the leading papers of the country, who are running it for the trade. This insures the visitors and exhibitors alike the best of treatment. Reduced railroad rates have been secured from all parts of the country; a fare and one-third for the round trip is to be had at any time during the show. Reduced hotel rates have been secured at all the prominent hotels, both American and European, and free admission will be given to all who are interested in the trade or who intend to become interested. The morning sessions are reserved exclusively for those who desire to investigate the exhibits, with a view to possible purchase.

Bicycles, Tires, Accessories and parts will each be grouped as separate exhibits. The names of the following well-known firms who will exhibit are a guarantee of the success which the show will have:

Rouse, Hazard & Co.
St. L. R. & W. G. Co.
Marion Cycle Co.
Columbus Bicycle Co.
Grand Rapids Bicycle Co.
Lamb Mfg. Co.
Geo. N. Pierce & Co.
Buffalo Tricycle Co.
Warman & Schub.
Ames & Frost.
Julius Andrae.
Waltham Mfg. Co.
Black Mfg. Co.
Ariel Cycle Mfg. Co.

The show will be held in the armories of Battery D and Second Regiment on Michigan Avenue, opposite Monroe Street, in the very heart of the business district of Chicago. General admission is fifty cents.

Further particulars may be had by addressing the Secretary of the National Cycle Exhibition Co., at the Caxton Building, Chicago.

Leather Belts.

"No one using leather belts can afford to be indifferent to their care. There is a certain amount of elasticity in all good leather belting, but time and continued hard work seem to destroy or at least weaken its power. Then comes the question whether it is better to simply tighten the belt or use some form of dressing. Experience of many very practical observers seems to favor the use of a good dressing, as tightening the belt strains it and calls for more engine power. A dynamo engineer who is transmitting 60-65 H. P. with a 50 foot link belt 8 inches wide, running from a 72 inch pulley on driving shaft to a 13 inch pulley on dynamo, claims the freedom from jumping and flickering of the lights is due entirely to the belt dressing used and that tightening never helped. The superintendent of a large printing establishment has an 18 inch main belt now running its eighth year which has never been taken up, and it would be extremely hard to convince him that the dressing used does not preserve the life of the leather and keep it soft and elastic. Of course, one should be careful what sort of dressing is used. Soap, rosin, tar and tallow should not be used at all. Even castor oil is criticised." The dressing used in the two cases cited was Dixon's belt dressing and leather preservative, "which was the only article that would start the big driving belt used at the Paris Exposition in 1878, and keep it from slipping." Circulars about the dressing will be sent to anyone interested, by the Dixon Crucible Co., Jersey City, N. J.

1895 Bicycles.

Hardware and bicycle dealers are commencing to look around for a satisfactory and paying line of bicycles for 1895. The pioneer bicycle house of A. W. Gump & Co., Dayton, Ohio, are getting out a special line for 1895 that will be welcome to both dealers and purchasers. Their Admiral Bicycles, with 28 inch wheels, diamond frame, full ball-bearings, wooden rims, and only weighing 29 pounds, and described "as good as others that are sold at from $75 to $100, will list at not over $65. Dealers can get special prices on quantities by corresponding with above firm and make the line a profitable one." A. W. Gump & Co. are of the pioneer bicycle dealers of Ohio, and have gained a universal reputation for their goods.

One has only to stand on the corner of West Broadway and Chambers Street to be assured of the fact that the country is on the road to better times. Some months ago we stated that this corner was the thermometer of trade, and can now confirm this assertion, for during the financial depression into which the country was thrown some months ago, the traffic at this place was hardly a noticeable feature, whereas, now that trade in general is on the improvement, one's life is in jeopardy while endeavoring to clamber over trucks and other vehicles in an attempt to cross the street.

HARDWARE costs only One Dollar a year.

Digitized by Google

There are Buyers and—Buyers.

EDITOR HARDWARE: Being a buyer of a large factory, I had occasion one day to call on the buyer of one of the largest wholesale Hardware establishments of the West. A lock agent had just left.

"Do you know," said the buyer, "that man has a drawer lock that looks like a 'winner'?"

"What do you consider a 'winner'?"

"Well," the buyer continued, "that man has, first, a lock that is a *lock*; second, it is simple in construction; third, it can be manufactured cheaply; fourth, it can be easily and cheaply attached."

"Well! I suppose you will sell lots of them?"

"That one point lies with him. You will notice I said *looks* like a winner," and the buyer continued, "looking like a winner and being one are two different things. I told him I thought he had a good thing, better, in my opinion, than anything I had yet seen, but my private opinion and the opinion of the public are two entirely different things. When he has created a demand for that lock so that furniture men come and ask for it, then, and not until then, can I afford to sell it. I know that they ask for other makes—locks that have won a reputation and have an established value. Well, that fellow doesn't yet understand why I won't buy his goods and push them. I can better afford to make a smaller profit on an article that I know has won public favor, than get 'stuck' on one that promises a larger profit and looks like a winner, but fails to keep its promises and whose looks have deceived me. To create a demand belongs to the inventor and manufacturer. To supply the demand after it has been created belongs to the merchant. Other buyers may do the introducing of goods if they want to, but I have had enough of it. I prefer to use my energy to control the demand for goods of established merit."

Was the buyer right or was he wrong? A BUYER.

Bicycles in the Hardware Trade.

INCORPORATIONS, NEW FIRMS, AND WHEELS ADDED BY THOSE ALREADY EXISTING.

Northfield, Mass.—Charles W. Felts, bicycle manufacturer, is negotiating with business men at New Bedford, Mass., looking to making his present plan a nucleus of a larger enterprise, to be established in New Bedford.

Indianapolis, Ind.—The Eclipse Bicycle Co. has made the Simmons Hardware Co., of St. Louis, the exclusive representative in the West, Northwest and Southwest, selling the company's wheels under the name of Eclipse.

New York, N. Y.—The Whitman & Barnes Mfg. Co., No. 111 Chambers Street, New York, are putting on the market an improved nickel-plated bicycle wrench for high grade machines.

Hartford, Conn.—The League Bicycle Co., which three months ago decided to reorganize and increase capital stock to $100,000, are said to be entertaining overtures looking to the transferring of the manufacturing plant to some other city.

Mukwonago, Wis,—The Mystic Cycle Works, incorporated by A. Hardon, Perry P. Camp, Clinton Palmer and others, to manufacture bicycles; capital stock, $6000.

Battle Creek, Mich.—The Meteor Bicycle Co. will remove their manufacturing plant to Saginaw, Mich., and considerably enlarge facilities.

Syracuse, N. Y.—The Barnes Cycle Co., incorporated by Charles F. Saule, Arthur R. Peck and Charles A. Bridgeport, of Syracuse, and others, to manufacture and sell bicycles and bicycle supplies; capital stock, $100,000.

Belvidere, Ill.—William M. Sawyer, a new dealer in sporting goods, invites correspondence with manufacturers of sporting goods and bicycles.

Washington, D. C.—J. E. Knott & Son, bicycles; opened new store at No. 406 Massachusetts Avenue, N. W.; will make a specialty of repairing and renting.

Chicago, Ill.—The Monarch Cycle Co., Lake and Halstead Streets, have increased their cash capital, by paying in $100,000. Their paid up capital now is $300,000, with a surplus of $140,000. The company announce that George H. Pixley is now connected with C. F. Guyon Co., Nos. 97 and 99 Reade Street, New York, the Eastern branch of the Monarch Co. Mr. Pixley will act as superintendent of agencies.

Butler, Ind.—The Butler Mfg. Co., bicycles, bicycle manufacturing, succeeded by a new company, known as the Butler Co.

Geneva, Ohio.—Geneva Cycle Co., reported last week as sustaining a fire loss of $1000, incurred more serions damages than was then reported. An explosion of gas in the brazing house produced damages to the extent of $10,000, which was fully covered by insurance. Before the walls were cold the work of rebuilding was commenced, and the entire plant was again in operation.

Toledo, Ohio,—The Dauntless Bicycle Co., incorporated by John B. Melink, Titus B. Terry, Charles T. Melink, Samuel R. Dority and Rufus H. Baker, to manufacture bicycles, tricycles, cycle fittings and supplies; capital stock, $25.000.

Brantford, Can.—The Henderson Cycle & Mfg. Co., limited, have succeeded the D. S. Henderson Mfg. Co, and will manufacture a high grade wheel, to be known as the Common Sense.

St. Paul, Minn.—The A. D. Smith Cycle House will open new bicycle store, January 15th, and will handle the Sterling.

Chicago, Ill.—The Meter Cycle Co., incorporated by Will H. Clark, Charles S. Babcock and Howard M. Carter, to manufacture bicycles, vehicles, boats, etc., requiring meters; capital stock, $500,000.

Fayetteville, N. C.—E. J. Hale, Jr., bicycles, accepted agency for the Monarch Cycle Co.

Westboro, Mass.—Westbore Bicycle Pedal Factory is being made ready for operations which are about to commence.

Monroe, La.—The Southern Hardware Co., limited, incorporated with I. Baer, president; Sig Marx, secretary and treasurer; capital stock, $10,000. Will take up bicycles, and invite correspondence with manufacturers of bicycles and bicycle sundries, looking to accepting agency.

Springfield, Mass.—The Rubber Tire Wheel Co. have increased capital stock from $10,000 to $30,000.

Transportation Rates for Twenty-Five Years.

An article by Thomas L. Greene in the twenty-fifth year Anniversary Number of the AMERICAN GROCER shows that the all rail rate on grain from Chicago to New York, which was 70 cents per hundred pounds in 1869, is but one-third that amount in 1894. The rate on live stock and dressed beef was 95 cents in 1872 and 45 cents in 1894. Dry goods from New York to San Francisco in 1860 paid $6.50 per 100 pounds and in 1894 one-half that sum. Carloads of fruit from California to the Atlantic Seaboard cost $4.20 per 100 pounds in 1869 and $1 per 100 pounds in 1894. Dry goods from New York to Chicago were charged $1.50 per 100 pounds in 1869, 75 cents in 1894. In 1869 the N. Y. C. R.R. averaged over 2 cents per ton per mile on all its traffic, while the average now is 7 mills per ton per mile; the Illinois Central charges have in like manner fallen from 2½ cents to 9 mills per ton per mile, and the Louisville and Nashville from 3 3-10 to 1 cent. Ocean freights have fallen in equal measure. Wheat which paid 13 cents per bushel from New York to Liverpool in 1869 is now being carried for 4½ cents. Inventions, machinery and competition have done it.

"Do you see that man?" volunteered the barber to a reporter. "He is in queer business. He sells razors to barbers. There is nothing so side-splitting about that, but the fact that he buys his stocks in pawn shops, makes it queer. He argues this way: When a barber is hard up he sells his poor razors first. When he gets harder up he will let his pet razors go, and these he will want to keep a string on so he pawns them with a hope of redeeming them. Thus the very best razors go to the pawn shops, and he knows a good one when he sees it."

The Kansas City (Mo.) Vehicle, Hardware & Implement Association held an annual banquet at the Coates House, Kansas City, some evenings since. Thirty members were present, and the annual reports of the officers were read. The officers are W. G. Stowe, president; J. M. Patterson, first vice-president A. Gallagher, second vice-president; Ira C. Hubbell, secretary and H. S. Ferguson, treasurer.

Will Help Build Good Roads.

EDITOR HARDWARE: You well remember that some time since in your columns, I advocated that business men generally interest themselves in better roads. I firmly believe that if all men of means would voluntarily tax themselves from five to fifty dollars each and every year for road improvement, the investment would pay a good round interest to all concerned. I have but little faith in any road improvement scheme unless it is backed up by the wideawake business men of the country. I think, too, that they are just the ones who ought to push the job, and shoulder the greater part of the expense, because no set of men would reap so large a benefit as would certainly be awarded to them.

I stand ready at any time to be one of twenty who will agree to build at least one mile of good solid Democratic road, in each and every year, upon the highways leading out from this beautiful village, to the distance of from five to eight miles. When business men see their country customers plodding over rough and muddy roads to get to town to do their shopping and milling, it does seem that if they had any "git" they would willingly and anxiously join hands and purses with our country cousins, and pass one undying resolve to build some up-to-date and commendable roads, and that "right quick," too.

What have you to say to help the good and desirable work along? I have endeavored to set a praiseworthy example, during the past few months, by putting a lot of gravel upon the streets at my own individual expense of over fifty dollars.

On August 3, 1894, nearly the whole of the business portion of our lovely burg was burned to the ground. The whole loss was about $160,000. To-day over one-half of the "burnt district" has erected thereon fine brick and stone blocks that would be admired in any village or city in Michigan. Thirty-two of us were cleaned out, root and branch, We all had to work like beavers to get some places to crawl into and do business. I don't believe another set of people can be found that would have displayed more courage, determination and bull-dog tenacity of purpose than ours have in rebuilding a burnt village. Our citizens are praised by one and all in their unfaltering and hard-working desire to erect new, desirable, pleasant and better business offices. C. NEWTON SMITH.

Lakeview, Mich., November 29, 1894.

Trials of a Stove Dealer.

"We are expected to prevaricate some," said the retail stove dealer, to a reporter of the New York *Sun*. "It is absolutely necessary if a man would succeed. If you don't you lose your trade. Now, this is the worst time of the year for us. It's all on account of the weather. If there is one cold day we are suddenly invaded by an army of women all wanting their stoves repaired. Some want new brick, others want to swap an old stove for a new one, while many want grates of all descriptions. We don't keep such things in stock, and if they are not ready when you promised them (and they are not)there is trouble. You don't want to lose their trade so you tell them you had to order the brick from Pennsylvania, or that they are all out of that kind of grate at the factory.

"The women ask hundreds of foolish questions: 'Why does the smoke come out of the doors? What's the best kind of coal to use in that stove? Will that stove bake bread on the bottom?' and things like that. Most of these people have not used their stoves all through the summer. They have been using gas stoves. Their stoves get clogged up with soot. The grate cracks and the brick falls out. It keeps me in hot water at the beginning of every fall, and it takes me the rest of the season trying to square myself with my conscience."

A Speaking Watch.

The *London Standard* says that a watchmaker at Geneva proposes to make a chronometer which will speak, instead of ringing the time, when the bottom is pressed. He has devoted a great deal of patient study to his invention, the speaking process being produced by means of a small revolving phonographic plate in which presses a small piece of steel. The vibrations resulting give rise to words denoting the exact time. On the perfection of inventions of this class—that is to say, of what may be called the curious rather than the useful order—much time and study are spent without, it appears to us, much compensating advantage. A speaking chronometer would certainly be a curiosity in its line, but nothing more, since all most people want to know is the exact time, and whether they are apprised of the hour by ringing or by words, matters little. The Geneva watchmaker is said to have grown wasted and worn in the pursuit of his hobby—the production of a perfect speaking time-piece which he has not yet succeeded in making.

Very Kind of Him.

The clerk in the stove establishment was trying to sell the countryman a stove, and the way he talked it up was worth twice the salary he was getting.

"I tell you what it is," he said, "I'll let you have that stove at $15, and you can't get one anywhere else in the town like it for less than $21."

"How do you know I can't?" asked the chary old fox from the back lands.

"Because there isn't another like it in town," responded the clerk with the confidence of a man on the witness stand.

"And you have the only one?"

"Yes."

"And you are only letting me have it as an accommodation?"

"Exactly."

The old one patted the clerk on the back affectionately.

"Well, young feller," he said, "I'm as willin' to make a sacrifice as you are, and bein' it's you, I won't rob you of the only thing of the kind you have in the world. Good morning. Any time you're up my way stop and take a meal with me. Good-bye," and with a soft, meandering smile, he passed away. —*Detroit Free Press.*

What the Nation has Done in Twenty-five Years.

During this period its debt per capita has been reduced from $64 43 to $12.55, a steady decrease which, in connection with increasing population, has made the burden of taxation comparatively light.

In 1869 the Government paid in interest $3 32 for each inhabitant, while that charge in 1893 was only *thirty-four cents*. On the other hand, the sense of the nation's obligation to the survivors or the Civil War was so great that the charge for pensions was increased from 78 cents per capita in 1869 to $2 37 in 1893.

The net ordinary receipts of Uncle Sam in 1869 was $9 82 per capita, against $6.91 in 1893.—*American Grocer.*

In the window of a Hardware store in Manchester, N. H., is a sight which attracts a great deal of attention. It is named the "Bicycle of 1895—weighs 14 pounds, 3 ounces." The wheels are grindstones, the upright part of the frame spades, the connecting lower part axes, the upper part and seat a shovel, the fork a pitchfork on which were hung a large lantern with reflector, and an old-fashioned front door bell and a coiled spring; the treadles and handle bars were parts of machines that were in stock. The rider was a work of art, for his body was peck baskets covered with a hunting jacket, his neck a dry measure, his head an ice cream freezer, his hat a wash basin, his legs of covering paper, his hands small garden weeding forks, his ears window pulleys, his nose the cutting part of a plow, his eyes part of door trimmings, and so on. It requires some brains to keep good proportions in a caricature made of such crude materials.

"See my thumb-nails!" said a pretty lady clerk of a Lewistown, Me., variety store. "They are broken off by opening jack-knives for men who want to buy them. We have to open them to show them, and, as I live, they will stand by and see us break our finger and thumb-nails, trying to open knives for them to examine. Not very many men will offer to open them for us, but some do."

The Latest Catalogues.

The Illinois Pure Aluminum Co, Lemont, Ill., have issued a catalogue of their Pure Aluminum utensils, steam jacketed kettles and other vessels. It is printed in a very artistic manner upon heavy paper, and the various illustrations of this handsome line of goods stand out in great distinctness. In a preliminary note deseribing their goods the company say: "Scientists and others versed in the peculiar suitability of aluminum for cooking utensils, have patiently waited the time when the price of the metal should bring it within reach for this purpose. Electricity has been the means to this end, and the Illinois Pure Aluminum Co. are the first in the field to embrace this opportunity. Assuming, however, that the general reader is not familiar with the reasons why aluminum possesses every qualification necessary to make it the one perfect metal for cooking utensils, we will set them forth as briefly as possible. First and foremost comes the fact that aluminum is entirely free from poison. Next in importance comes the question of durability. Aluminum utensils cook quickly without scorching food. Last, but not least of its virtues, is the lightness of aluminum, which is nearly three times lighter than iron, and three and one-half times lighter than copper. Aluminum has a few enemies which are not met with in cooking, but it is well to mention them. Caustic alkalies consume aluminum rapidly. Muriatic acid acts slowly upon it, but pure sulphuric or nitric acid does not affect it, except the nitric acid be at high temperature."

F. E. Myers & Bro., Ashland, Ohio, have just issued a handsome catalogue of their well-known Myers Spray Pumps, which illustrates these goods in very fine form, showing sectional views of the construction thereof, methods of operation, and appliances used in connection therewith, etc. The little book, taken as a whole, is a liberal education in the line which it represents, and, of course, it will be impossible to give a detailed statement of the various goods illustrated therein. Some of these we hope to present to the Hardware public in an illustrated form at a later day. The catalogue is prepared in a very artistic manner, and will be sent upon application.

The Grand Rapids Refrigerator Co., Grand Rapids, Mich., have just published a very handsome catalogue of their well-known Leonard Cleanable Refrigerators. It consists of a great number of handsome engravings printed on fine paper, upon loose sheets, which are tied together by a blue ribbon. These engravings are printed in blue, while the cover of the catalogue is also blue, with white lettering. It is needless to say that they present a great variety of handsome designs, their line of Sideboard Refrigerators being especially attractive and contain many new features. Some of these Refrigerators are surmounted by a china cupboard, which is a feature desirous in places where economy of space is necessary. These Refrigerators are made of hardwood, either of oak or ash, with antique finish. The trimmings are of solid bronze, while the carvings are cut into the wood, instead of being merely embossed. These Refrigerators took three medals of highest excellence, and a special diploma, at the great World's Fair, in Chicago, and also a gold medal at the Antwerp exhibitian of 1894.

The Allentown Hardware Works, Allentown, Pa., have issued a supplementary catalogue of their surface Refrigerator Locks and Handles. These goods are thoroughly illustrated and the catalogue very handsomely displays their entire line. The company say: "We manufacture all kinds of mortise and surface refrigerator locks, knobs, hinges, name plates, castors, in all the latest designs and finishes; real bronze—ornamental, plain, nickel-plated. Bronze-plated—antique copper and antique brass. Also fine grades of bronze, brass and iron castings. We will be pleased to furnish estimates on any work in our line."

The H-P Nail Co., Cleveland, Ohio, have issued a neat and handsome little book in colors, illustrating their line of Wire Nails, Wire Rods, Wire, Staples, Tacks and Rivets. These goods are illustrated upon every page, with sizes and prices in full. It would be, of course, an impossibility to enumerate the articles which they show, but in addition to the above line mention could be made of two of their novelties, which are the "Mrs. McGregor Family Nail Box," and "Household Box." These books will be sent upon application.

The Goodell Co., Antrim, N. H., have issued a circular illustrating and describing their line of Butcher's Knives and Steels. They say: "These goods are made from steel prepared expressly for us. The utmost care is exercised in every branch of their manufacture. Every knife and every steel is severely tested before it leaves our factory. We guarantee them to suit."

The Ennis Specialty Co., Troy, N. Y., and New York City, have issued a catalogue describing and illustrating their Ventilators, Dinner Pails, Bread Jars, Oil Cans, Metallic Skylights, etc. They will be pleased to send the same upon application.

E. J. Hussey & Co., No. 80 John Street, New York, are sending their friends a little leaflet concerning the Door Checks and Door Holders which they handle.

The Pike Stones Abroad.

E. B. Pike and E. Bertram Pike, the well-known representatives of the Pike Mfg. Co., Pike Station, N. H., have been in the city for several days past, looking over the situation from the standpoint of their New York office, paying business visits to their friends and social visits to the Hardware Club, and also managing to take in the recent social gathering in Philadelphia. They bring the gratifying statement that the Pike salesmen in the West report a better feeling in all directions. They also add the cheering fact that the Pike Mfg. Co. are increasing their export business, which has been one of their principal factors of support during the recent depression. The demand for their Indian Pond Scythe Stones, and also for their Washita and Arkansas Oil Stones, has steadily increased, which demonstrates the fact that the superior quality of these goods is becoming understood abroad, and that their equal cannot be produced in Europe.

The Cream City Bins.

The attention of the trade is called to the advertisement of the Geuder & Paeschke Mfg. Co., Milwaukee, Wis., the well-known manufacturers of tinware, relative to their celebrated Cream City Flour Bins and Sifters, which have grown steadily in popular favor ever since their introduction. The letter forming the body of their advertisement is, as they inform us, an entirely voluntary testimonial, and as such is entitled to the careful consideration of dealers who desire to furnish their customers with satisfactory goods only. The Geuder & Paeschke Mfg. Co. will be pleased to furnish these goods to all dealers at very reasonable prices, and guarantee them to be just as represented. For the convenience of the trade in the East, the Central Stamping Co., Nos. 23 and 25 Cliff Street. New York City, have been appointed Eastern agents for the Cream City Bins, and will furnish them at factory prices.

In England a Hardwareman is making an advertisement in his shop window by representing a bicycle composed of various articles. In one case the construction is as follows: Two grindstones compose the wheels of the machine, an axe handle and hay fork form the frame and seat, a drawing knife the handle bar, meat cutter knives the pedals. The rider has stove pipe legs, feet of scoops and tin cups, body of wash basins, tin pails, etc., arms of conductor pipe, two quart pans for a face and so on. Of course, such an attraction draws the crowd, and that is exactly what the vendor is trying to accomplish in his unique display.

John S. Johnson, in making all of his new world's records at Louisville, last week, used on his chain the celebrated East India Stick Grapholine, which he considers one of the finest chain lubricants, as it reduces the friction and increases the speed of the running of the chain. Johnson speaks very highly of its excellent quality.

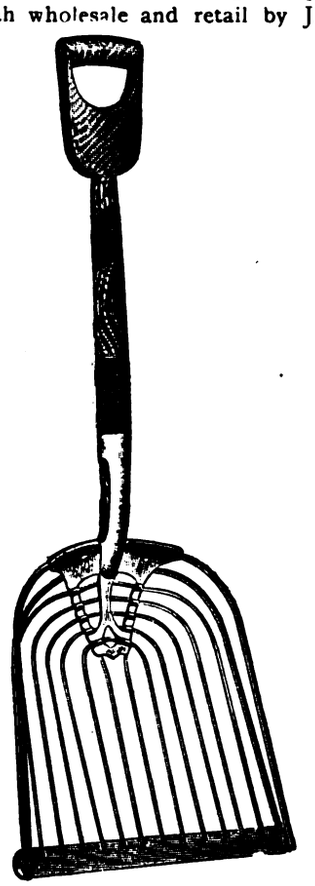
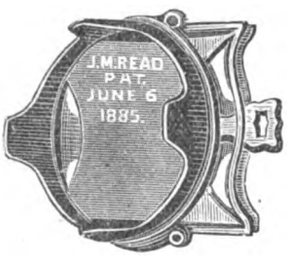
New Goods in the Market.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.



When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Read's Regulating Check Damper.

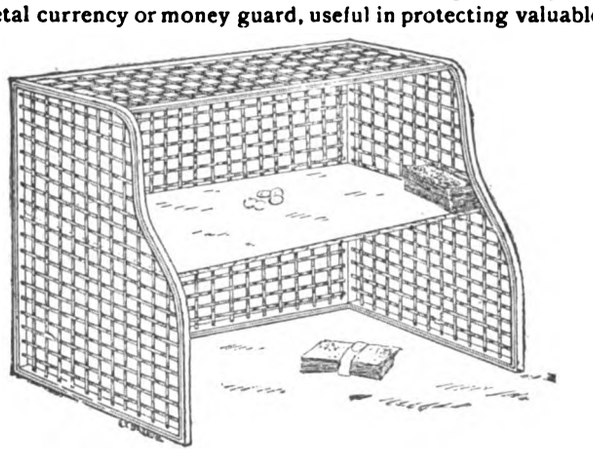
This article, Read's Regulating Check Damper, is being sold both wholesale and retail by J. M. Read, the inventor and

manufacturer, No. 63 Blackstone Street, Boston. It is spoken of in high terms for controlling the draft in all places where dampers are used. Full particulars as to prices, etc, will be furnished on application.

New Model Wire Scoop.

The Wire Scoop here shown is described by the makers as an "absolutely safe edge wire scoop," and is used largely by fruit growers and shippers for apples, pears, oranges and peaches, besides its original use for shoveling potatoes, onions and other vegetables. "It does this without bruising or injuring them in the least, which owing to numerous rivets and clips in some, and sharp prongs in others, cannot be done without damage. Of course, where fruits or vegetables are cut and scratched, they begin to rot. Its other advantages are that it is made entirely without rivets, and of spring steel stock, making it rigid, strong and durable; in fact, strong enough to handle coal or screen ashes with, and as constructed now, will bear a man's weight on the corners. They have a socket handle, are finely galvanized and attractively finished, and very light. They are also used now largely by ice men, with long D handles for taking out slush ice when gathering; also by fish dealers for handling fish rapidly. In fact, the Perfected Wire Scoop is becoming very useful and practical in various ways, never thought of a few years ago." It is manufactured by the Cleveland Lock Co., Cleveland, Ohio.

Pike's Natural Grit Hones.



We show in this connection one of Pike's Natural Grit Carving Knife Hones, manufactured and placed upon the market

by the Pike Mfg. Co., Pike Station, N. H. These are of convenient size, length from 12 to 14 inches, and have an octagon end, which makes them convenient for handling. They are made of medium coarse free cutting grit; are of uniform texture, very strong, and not brittle. They are sufficiently porous to prevent grease from glazing, which, as the manufacturers say, "is the principal trouble with emery wheels." They also speak of their cutting qualities, simplicity and cheapness. They would like all dealers who are interested to send for sample and prices.

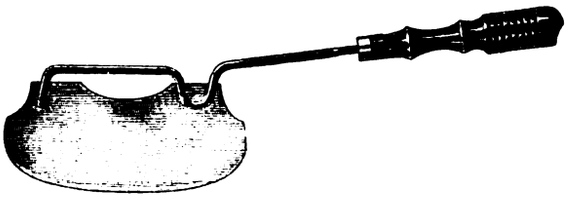
Cashier's Money Guard.

E. T. Barnum, No. 179 Jefferson Avenue, Detroit, Mich., manufacturer of wire and iron work, is offering to the public a metal currency or money guard, useful in protecting valuables

at the cashier's or teller's window. In the accompanying illustration we show a modern design of this useful office adjunct. The guard can be made of any size, the usual dimensions being, however, 30 inches high, 30 inches long and 18 inches deep. It is furnished in steel or brass wire, with any finish desired, polished or antique brass, oxidized brass or copper nickel-plate, electro bronze, Japanese bronze, or made to correspond with the office or bank fixtures by which it is surrounded. A glass wood shelf can be used. While having great strength, the article is yet light and convenient to handle. Mr. Barnum will be glad to send a catalogue of any work in his line to all who apply.

New Gas Heating Stove.

The accompanying cut illustrates a new Gas Heating Stove that has recently been put on the market by the Hipwell Mfg. Co., of Allegheny, Pa. "It can be attached to any ordinary gas jet by means of a rubber hose; can be used in any room, as it requires no flue connection; burns with a

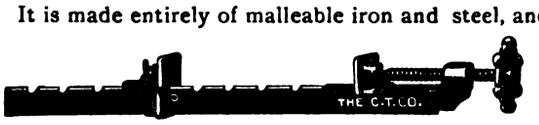


perfect illumination; positively without odor or escaping gas; has a removable cover which will be found very convenient for nursery or cooking purposes. It is a very handsome, attractive stove, and sells at a price that is within the reach of all."

A Family Cleaver.

Mason & Parker, Winchendon, Mass., are manufacturing and placing upon the market a twenty-five-cent Family Cleaver of

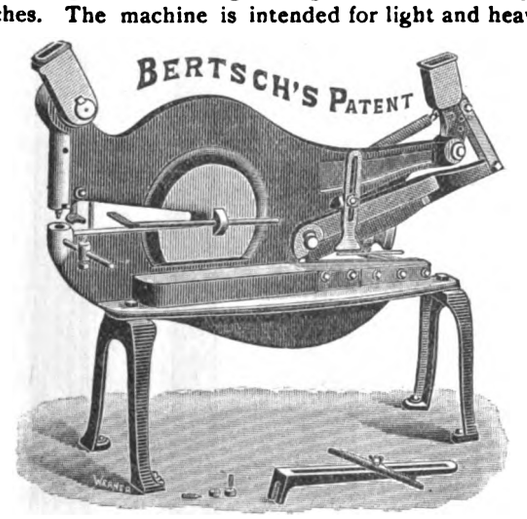
Digitized by Google



unique design, and what they believe "will prove a very popular article for household use." They claim that it is made entirely of steel, except the handle, which is of wood in cherry finish. The blade is six inches in length, of extra heavy

stock, and is securely riveted to the tang, into which it is inserted. The tang passes clear through the handle, and is riveted at the end and also cemented. The manufacturers state that the workmanship is first class. Goods are packed one dozen in a box.

Improved Joiner's Clamp.



The Improved Joiner's Clamp here shown is manufactured by the Cincinnati Tool Co., No. 281 Broadway, Cincinnati, Ohio. It is made entirely of malleable iron and steel, and the

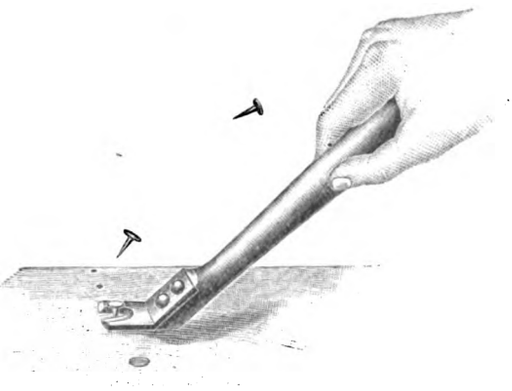
makers explain that it "does not crack, break, or slip, nor will it bind. Is quickly adjusted, light, strong and endurable." They quote the following list prices: Per pair, 12 inches, $2.70; per pair, 18 inches, $2.85; per pair, 24 inches, $3.

Bertsch's Combined Punch and Shear.

The Combined Punch and Shear here shown is being placed upon the market by Bertsch & Co., Cambridge City, Ind. The makers explain that "the working parts of the punch and shear are not combined, but are independent of each other; punch and shear are each provided with a lever socket, so that it is convenient for two to use the machine at once, except when cutting long sheets; lever on the punch will work from the front or the rear, while the lever socket on the shear has a series of holes for adjusting the knife bar links, so as to cut but half the length of blades, which increases the power from 50 to 100 per cent." They add that "the knife bar has a bearing on the rear side to prevent springing; with the tool are furnished three sets of punches and dies, back gauge, improved side pin gauge for punching holes at equal distances apart without marking off and strengthening bolts for the deep throat punches. The machine is intended for light and heavy sheet

iron workers, and is made in eight sizes with 4, 8, 12, 15 and 18 inch throat punch, adapted to punch flange and angle iron, and has 8, 10, 12 and 18 inch blades to cut round or flat bar iron in sheets up to ⅜ inch plate."

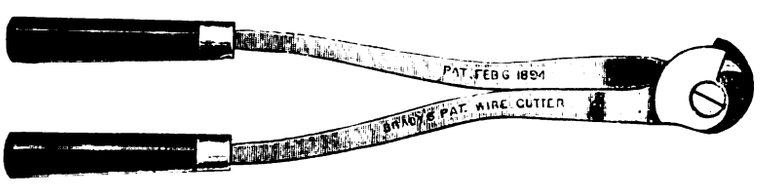
The Berry Sprinkler.



The accompanying cut shows a new Clothes Sprinkler lately put on the market by the Berry Sprinkler Co., No. 147 Franklin Street, Boston, Mass. They claim that it is made of brass, and therefore will not corrode. "This Sprinkler fills itself by absorption, or automatically, and wherever introduced gives perfect satisfaction, doing away entirely with the putting of the hands in water, and fills a long-felt want. For the spraying of disinfectants in the sick room, it is unsurpassed, and is now recommended by physicians for that purpose. For sprinkling house plants, laying dust before sweeping, and for spraying

long used carpets, with a few drops of ammonia added to the water before sweeping, which makes the carpet look brighter, it is highly recommended. Full directions accompany each Sprinkler." Retail price, twenty-five cents each. Write for discounts.

The Yankee Tack Puller.

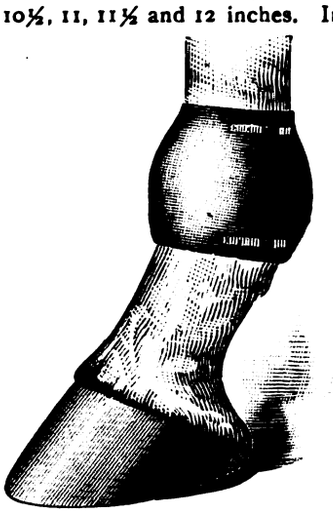


The Browne & Dowd Mfg. Co., Meriden, Conn., are putting out a tack puller as here shown. It consists of a metal handle, to which a cast steel claw is riveted; the claw is so curved that

it slides under the head with ease, and leverage such that it pulls the tack without bending. "They are neat, simple and effective and are packed in attractive counter display boxes."

Brady's Safety Wire Cutter.

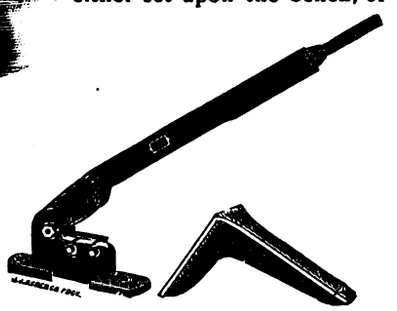
The Safety Wire Cutter here shown is being placed upon the market by James Brady, No. 83 Washington Street, Brooklyn, N.Y. It has insulated handles, and is used for cutting live wires and cables with safety; is made of steel drop forgings, and has vulcanized fibre handles, combining great strength and perfect insulation. The cutter blades are dropped forged, of the best tool steel. "All parts are interchangeable, making it always possible to replace broken or worn out parts. The cutter blades are so constructed that, as they are ground away in sharpening, they can, by our patented arrangement, be set around one notch at a time, and this can be repeated until the blade is used up, when a new set of blades can be inserted



thus making the Cutter as good as new, and this can be repeated indefinitely, as all other parts are practically indistructible." Prices: Nickelplated, $20; Antique Bronze, $18.50; Forge Finish, $17.50 each. Cutter Blades, $5 a pair.

The Rubber Ankle Boot.

The Bourne & Knowles Mfg. Co., Cleveland, Ohio, are calling the attention of trainers, breeders, horse owners, liverymen and Hardwaremen who handle such goods, to their new patent Rubber Ankle Boot, which is illustrated in this connection. It is made in the form of a cushion around the ankle, so that the horse when striking will not bruise the joints. This Boot



Digitized by Google

is made in seven sizes, which are respectively, 9½, 10, 10¼, 10½, 11, 11½ and 12 inches. In describing these goods they say that they "prevent cutting, chapping and scalding; lighter than leather boots, and will outwear the same. Can be worn on either ankle; is always in place and shape, and is not affected by dust, mud or snow."

Clough's Hand-Lever Shear.

This Hand Lever Shear is manufactured by R. M. Clough, Tolland, Conn. It is made to either set upon the bench, or by use of the bracket shown, can be fastened to a convenient post. The maker says that it will shear one-quarter inch iron. It is intended for the use of the blacksmith, carriage maker and other lines of labor. Its power is referred to, and the statement made that it can also be used in cutting round iron.

Riveting and Farriers' Hammers.

The Hammers here shown are being manufactured and placed upon the market by the David Maydole Hammer Co., Norwich, N. Y. In describing these articles the company say: "We believe our Farriers' Adz Eye Hammers, California Pattern, 'hang' better than hammers having curved claws, as nearly all the weight is directly in the line of the stroke when driving a nail. The claws are strong, sharp, and the split very narrow at the inner end. They are made in three sizes, nine, twelve and fifteen ounces weight. Instead of the wedge-shaped pein found on the usual style of riveting hammers, our Double Face Riveting Hammers have a small, full, round face, which we consider much better for nearly all the work for which these tools are used. Each style, round and octagon, is made in six sizes, running from three ounces to one pound ten ounces weight."

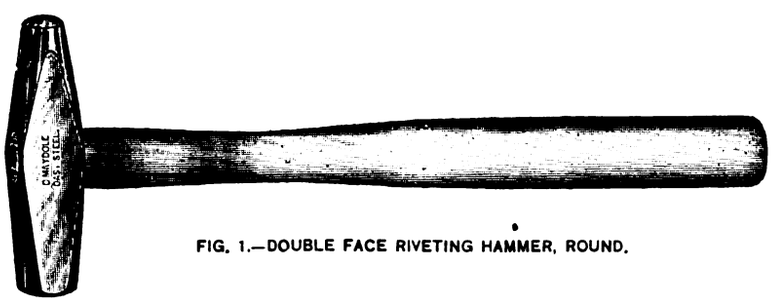


FIG. 1.—DOUBLE FACE RIVETING HAMMER, ROUND.

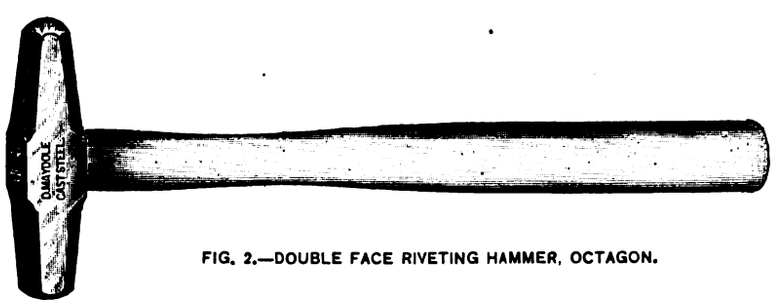

FIG. 2.—DOUBLE FACE RIVETING HAMMER, OCTAGON.

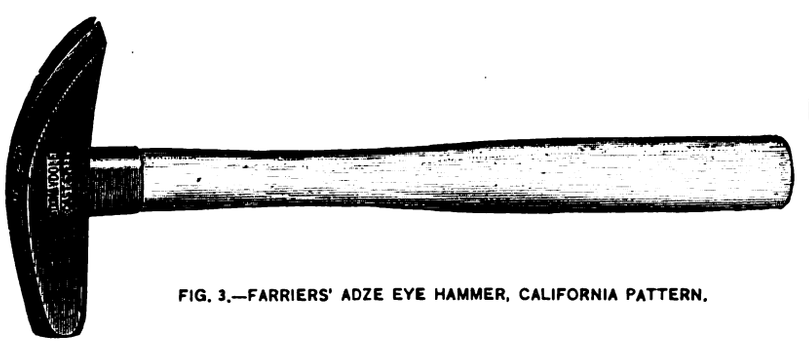

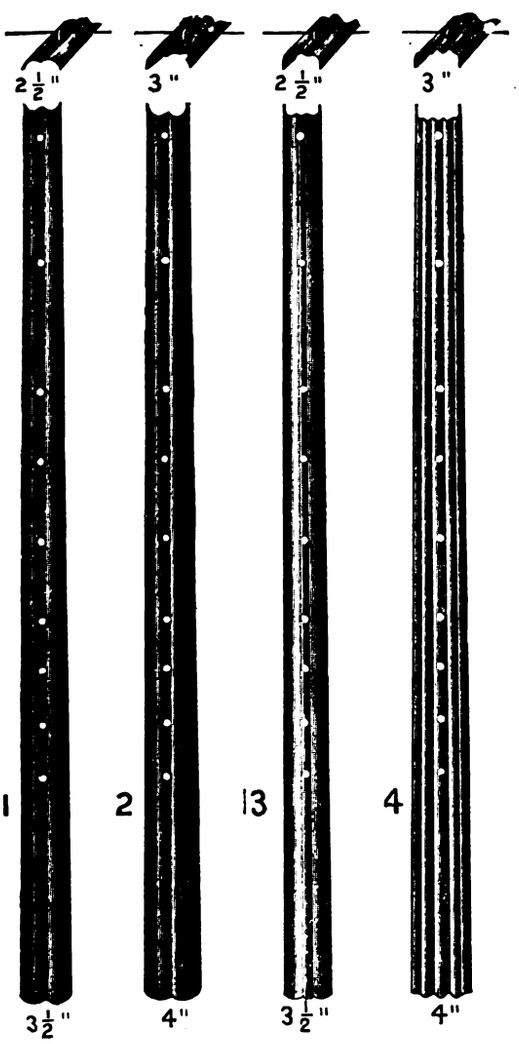

FIG. 3.—FARRIERS' ADZE EYE HAMMER, CALIFORNIA PATTERN.

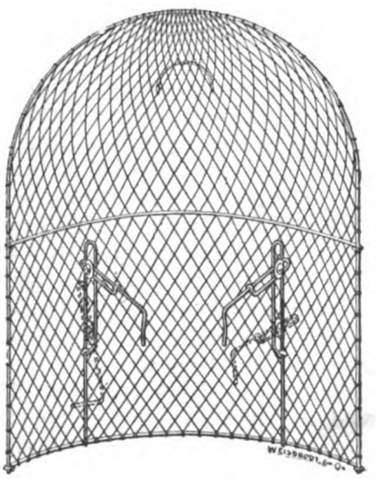
Pressed Steel Fence Posts.



Herewith is shown the new Pressed Steel Fence Posts that are being placed upon the market by the Avery Stamping Co., Cleveland, Ohio. This company have been experimenting for a long time to see if they could not distribute steel "into such shape as would make a light, stiff, strong, durable and low priced fence post, and the result of their experiments is exhibited by the cut herewith shown. These posts are made from sheet steel pressed into shape and afterwards coated with a non-corrosive compound for preventing rust, and the posts being tapered narrower at the top, make a very handsome appearance, and their form is such that they have great rigidity. These posts can be driven into the ground, thus saving digging and filling, and frost does not raise them. The simplicity of the fastening, which is merely a staple inserted through the holes, and bent, allows the wires to expand and contract. The post being light and nesting, for shipping purposes, there is a great saving in freight, cartage and handling, but the most telling feature is the price. The principal reason that steel posts have not been more universally used heretofore has been that the metal was not properly distributed, thereby requiring considerable more material which increased the weight and cost unnecessarily. These posts offer the same resistance to pressure in the ground as a wooden post of like size. They are particularly adapted for railway, farm lawn, park and cemetery fences, whether of smooth, barbed or woven wire." The Avery Stamping Co. are prepared to furnish these posts in any quantity, and solicit correspondence in regard to the same.

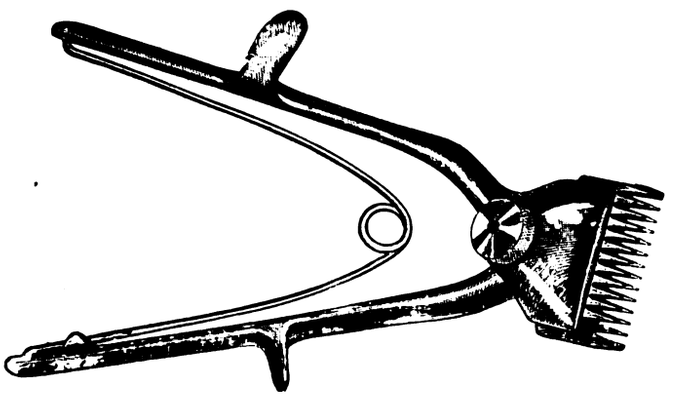
Extension Fire Guard Arm.



The Extension Fire Guard Arm here shown is manufactured and offered to the trade by the Cincinnati Mfg. Co., Cincinnati, Ohio. It is said that the Arm can be lowered or raised to

fit any grate basket, or extended to clasp the bars of receding grates. The arms fold down inside when not in use. They make no extra charge for fire guards furnished with the Extension Arm. They are also the sole manufacturers of the Monarch Grate Guard.

Horse or Dog Clipper.

The American Shearer Mfg. Co., Nashua, N. H., for whom Wiebusch & Hilger, Nos. 84 and 86 Chambers Street, New York, are selling agents, are manufacturing the Horse or Dog Clipper

here shown. It is made to operate with one hand, in order to leave the other hand free to hold the dog or animal being clipped. The teeth are made with extra wide divisions, in order that they may freely enter the close hair of a dog. The Clipper is nickel-plated and has the latest improvements, consisting of spring tension bolt, detachable plates and adjustable spring, which may be instantly removed.

Decorated Tea and Coffee Pots.

The Bellaire Stamping Co., Harvey, Ill., announce that they are now placing on the market "a very desirable line of Decorated Tea and Coffee Pots. These goods are finished in blue,

plum and chocolate colored enamel, and are all enameled white inside. The decorations are hand-work and of entirely different character from any other line of Decorated Enameled Ware on the market. They are decorated with enameled colors, and the design stands out from the surface of the pot. The effect is both pleasing and unique. These goods are finished with enameled wood handles, which do not heat, and the covers and other metal trimmings are of heavy brass, nickel-plated. These goods are meeting with great favor, as the price at which they are sold is within the reach of the great majority of housekeepers. The trade who have not yet received our catalogues should write for same and also for prices, which will be promptly furnished upon application. We are prepared to furnish special catalogues illustrating these goods in fac-simile colors."

Good Prospects Ahead of Him.

The following item, which is certainly of interest to the Hardware trade, in which Mr. Osgood is well known, is taken from a recent date of the *Union*, Springfield, Mass. The many friends of this gentleman will hope that the fortune suggested in this information, may eventually come into the possession of one who is so well qualified to make good use of the same:

"William B. Osgood, manager of the Keating Wheel Co., Holyoke, is a direct descendent of William Hyde, the founder of the Hyde family in America. Mr. Osgood thinks that he is one of the heirs to the Hyde estate, an English property valued at some $300,000,000, which is to be divided between some 400 American heirs. The family of which Mr. Osgood is a member was founded in this country in 1647, and Mr. Hyde was at that time the owner of this property in England. His ancestor was a Round Head, who fought under Cromwell in the time of Charles II. The Chancery Court has had the management of the property in England for some years. Mr. Osgood says that there is but one thing left to be proven, and that is whether the present Hydes in America are the descendents of Samuel Hyde, the eldest son of Samuel Hyde, of Norwich, Conn. Mr. Knowles, the agent of the estate, has been searching the records in this country for the evidence, which it is thought he has found. Mr. Knowles sailed for England last month, and has written a letter stating that the heirs in this country will be able, in his opinion, to recover their portion of the property. Mr. Osgood has two brothers who expect to come in for their share of the estate."

Looted the Store.

Some nights since, several burglars had a picnic and a wagon excursion at the expense of Janney Bros., Hardwaremen of Minneapolis, Minn. They gained entrance through a side window in the rear of the tinshop which forms an addition to the store in front, and made their way into the store, where a systematic search was made for everything valuable of a light and portable nature. Most of their plunder was in the shape of small articles, such as pocket knives, razors, silver-plated cutlery, revolvers, etc. After ransacking everything within reach and leaving what they did not want piled in confusion upon the counters, the midnight marauders turned their attention to the private office. Here they broke open the drawers, but succeeded in finding only a dollar's worth of stamps. They did not give up their search, however, until they had torn open all the letters lying around and scattered their contents over the desk and floor. Their exit was made through the side door of the tinshop opening into the alley. Just outside the door and close up to the side of the building could be seen, the next morning, the marks of light wagon wheels, showing that the goods were carried away bodily and on wheels.

Speer C. Nelson, No. 9 Frankstown Avenue, East End, Pittsburg, is the pioneer Hardwareman of that section. He carries a full line of general and fancy Hardware, stoves, tinware, fine cutlery, house-furnishing goods and builders' supplies. Being an affable gentleman and a thorough business man, he is enjoying all the trade he can attend to.

The Buckeye Churn Co., Sidney, Ohio, will be pleased to send prices, circulars, etc., to any who may be interested in their Buckeye Churn, an article which is built upon a new principle, and which has met with no little degree of success.

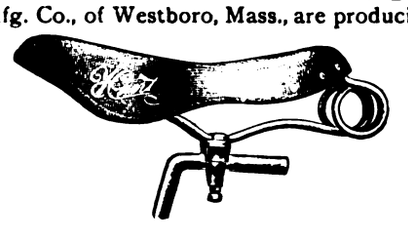
Illustrated Bicycle Novelties.

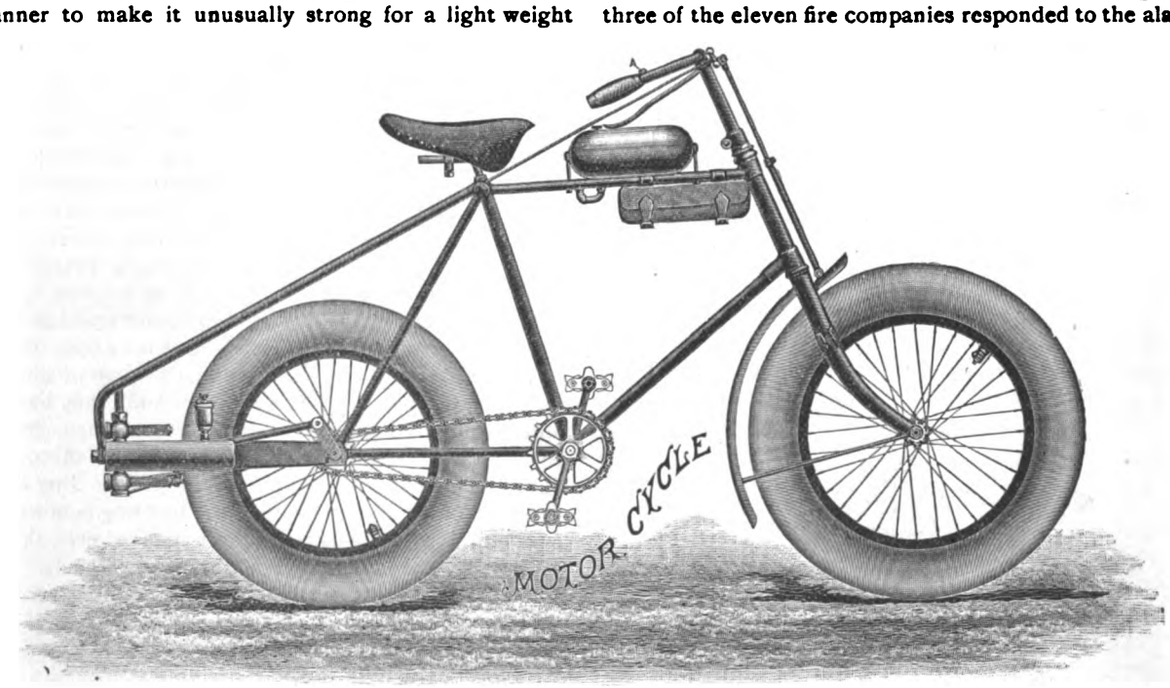


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

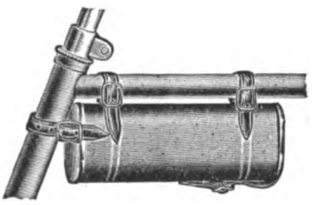
When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

A New Bicycle Saddle for 1895.



To meet the demand for a comfortable saddle, light in weight, the Hunt Mfg. Co., of Westboro, Mass., are producing the Sad-

dle shown here, which they are fitting for the coming season with their Special Tops, which they claim "to be the nearest approach to any absolutely unstretchable saddle leather that has ever been produced, at the same price as the ordinary leather." Either the special top or the regular leather top will be furnished as ordered in black or in colors. Liberal discounts to the legitimate trade. No goods sold except to dealers. Send for catalogue of some fifteen styles of saddles and tool bags.



A Motor Cycle.

The Hitchcock Mfg. Co., Cortland, N. Y., are placing upon the market the Motor Cycle here shown, the right of manufacture and sale for which they have purchased from the Motor Cycle Co., Cleveland, Ohio. In describing it they say: "Is a machine that will carry a person at as high a rate of speed as is safe over roads and highways, without fatigue to the rider. You sit on the machine with your feet on the coasters and guide; the Standard Oil Company's product does the work. The machine is built on the most approved lines, heavy enough to withstand hard usage, with non-puncturable tires, 4 inches in diameter. It will run up hill at a good rate of speed. It may be run at any speed, from one to as many miles per hour as the operator has courage to ride. May be propelled by foot power if desired. The machine is designed and constructed in a manner to make it unusually strong for a light weight machine, adapted to meet the requirements of all classes of riders and convenient to operate. The front and rear wheels are built 22 and 20 inches in diameter, respectively, with 4-inch pneumatic tires, with non-puncturing strip between inner and outer cover. We find that the 4-inch tire can be used with less pressure than is usually used, owing to the large diameter, giving the rider the full benefit of a very resilient tire. The surface presented to the ground when the machine is in operation is about 5 inches in width by 12 in length, giving surface sufficient so that it can be ridden over mud, sand, dust, and over rough roads. The power mechanism is simplicity itself, and is composed of two hot-air engines, one on either side of the rear wheel, constructed on the same lines as the railroad locomotive. Owing to the fact that the hot-air engines take pressure from but one end, the mechanism is more simple, and less likely to get out of order, than any known style of power-producing machines. The can in front of the operator carries the oil, which is conveyed through the frame to the cylinders of the engines, where it is mixed with air. Being ignited it expands the atmosphere and forces the plungers forward. It is an impossibility to have an explosion, or anything occur which is either harmful or unpleasant. It is an impossibility to run the machine until the passenger has taken his position in the saddle." The makers will be pleased to quote prices, etc.

Tool Bag. No. 41.

The accompanying cut shows the Hunt Mfg. Co.'s new Metal End Tool Bag. This is a telescope bag, "of ample capacity for carrying all the cyclists' repair outfit and tools, for

touring, and has both ends handsomely nickel-plated, or only one end nickeled as desired. It produces a neat effect on a nicely finished wheel." Prices furnished upon application to the company, at Westboro, Mass.

Loss of the Lozier Bicycle Works.

The extensive bicycle factory of the Lozier Mfg. Co., Toledo, O., was completely destroyed by fire on the evening of November 28th. The last of the five hundred employees had left the mammoth structure but a short time before the alarm for the fire was sent in. The factory is nearly three miles from the centre of the city, so that when the first of the fire apparatus arrived on the scene the flames had control of the building. All but three of the eleven fire companies responded to the alarm, only to find, to their chagrin, that there were but two hydrants from which to take water. The two streams were inadequate to cope with the blaze, and half an hour after the alarm was given the factory was almost a complete ruin. The fire started in the "assembling" room of the factory, and was caused by the explosion of a large tank of enamelling fluid. The loss is about $500,000 to $700,000, with insurance of $300,000. The destruction of the factory comes at the time of its busiest season.

Digitized by Google

The company had, it is said, 25,000 wheels under way for next year's trade. The general offices of the concern are in Cleveland.

The Lozier Mfg. Co., it is needless to say, have gone again to work with that great energy which was displayed in the creation of their works and the upbuilding of their business. Under date of November 30th, H. A. Lozier & Co., the Cleveland end of the concern, issued the following circular statement:

We are appreciative of the expressions of sympathy in the loss we have experienced in the destruction of our magnificent bicycle plant. Volumes of telegrams and letters have been received with the kindest of offers and expressions. While words are inadequate to express our grateful feelings, we desire to convey to our brother manufacturers, to our dealers and our many friends, our thanks for their whole-souled offers of assistance, encouragement and sympathetic expressions. While misfortune is ours at the very time we were to swing wide the gates for business of 1895, we beg to state that we shall replace our plant with equal or greater facilities than before, at as early a date as human energy, aided by abundant capital, is capable. Arrangements are already completed whereby we can promise Cleveland Wheels in sixty days; and, while deprived of an opportunity that was ours to present an elegant line of bicycle production for 1895 for the favorable consideration of the trade December 1st, we must crave the indulgence of our friends in this forced delay. We shall be in the market with the Cleveland in the early months of 1895.

Sincerely yours,

H. A. LOZIER & CO.

Cleveland, Ohio, November 30, 1894.

The Standard Nut Lock Company, Newark, N. J., organized in 1891 with a capital of $100,000, is in financial difficulties, and a rule to show cause why a receiver should not be appointed, issued by Vice-Chancellor Van Fleet. William N. Blanchard, a stockholder, was the petitioner. The company's assets, exclusive of certain patent rights in this and other countries, are only $2000.

The Franklin Brass & Bronze Co., No. 111 Chambers Street, New York, have issued a new catalogue of their various manufactures, which W. F. Brainerd, the secretary and treasurer of the company, will be glad to furnish on application to dealers throughout the country.

Joseph H. Seed, Nos. 21–23 Center Street, New York, has issued a revised catalogue of his patented specialties. This includes a large line of very attractive articles. Mr. Seed will be pleased to send this catalogue upon application.

The Bradley & Hubbard Mfg. Co., Meriden, Conn., are so busy at present that one-half of their force of employees are compelled to work until 9 o'clock at night. This certainly is an encouraging sign of revived business.

The Novelty Iron Works, Ashland, Wis., were destroyed some days since by fire, involving a loss of $250,000. The heaviest loser is D. J. Seyler, that city's pioneer iron worker. It is expected that the plant will be rebuilt.

The Axe & Edge Tool Works, of White & Ham, Honesdale, Pa., which were destroyed by fire some days since, are being rebuilt, and the company expect to be in shape and resume full operation within the coming two months.

At a fire which occurred on November 23rd the wire nail works of Carnegie, Phipps & Co., Beaver Falls, Pa., were destroyed, at a loss of $100,000; which loss was fully covered by insurance.

At a fire in Mount Olive, Mo., some evenings since, the wire fence factory of Edward Webber was destroyed, at a loss of $4000.

The Giese Wire Mill, Dolgeville, N. Y., it is reported will soon resume operations.

Review of the Markets.

Money: The two leading events of the past fortnight have been the successful placing of the issue of the United States bonds, and the reassembling of Congress. The issue of the bonds is taken by all financial minds to be only one of temporary relief, and it is felt that some measures must be taken by Congress to give permanent relief. This naturally will be a slow and tedious process.

The meeting of Congress is of little concern. The session will be too short to accomplish much that would provoke discussion. Then for three years comes a quiet spell to the general business man, as during that time neither party will have control of both the legislative and executive branches of the government, and legislation of a partisan and doubtful character will be completely blocked.

The rates for money are somewhat higher, owing to the withdrawal of current funds for the new loan. Sterling exchange is higher, showing that foreigners care more for our wheat and cotton than they do for our bonds in the present condition of our currency.

There is a good distribution of Hardware, but it is expected that it will now soon fall off, and travelers will straggle in from day to day until Christmas. Then the days of inventories will come along, and not much will be done before January 15th. Next year every one expects to get a fair living, at least.

In the matter of prices, there seems to be little hope for improvement. The price of iron is constantly shrinking, and as long as this goes on there can be no advance in prices. This is the reason why we are gradually obtaining a market for our wares in every section of the globe, and like our wheat and cotton, the foreigner generally makes the price. Shelf Hardware is selling very well in various sections of the country, while seasonable goods are in steady demand. In heavy Hardware trade is fair, but it must be remembered that there were no large building operations during the present season, and the demand for goods must remain limited until a change occurs in the undertaking of new enterprises.

There is a good demand this season in various sections for oil and gas stoves from retail Hardwaremen, and the interest in this direction has grown in good proportions. In some sections the sale of gas stoves is in the control of the gas companies, and little or no headway can be made under such a handicap. The gas company make the connection in such cases free of cost.

In glass, demoralization has given way to a feeling of confidence among manufacturers and dealers, which has been caused by a decided improvement in actual consumption. Contrary to what was going on one month ago, the market is active, and stock has been scarce. A large demand comes from the East, where building operations are being carried on upon a large scale. Quotations are at 85@10% on the old list.

In paints there is very little activity, and little is expected until next year. Mixed paints, as well as colors in oil, are slow. The trade in white lead is, as usual at this season, very light. Sales are small, and simply meeting daily needs. The competition of the English and German corroders is mentioned as a future menace to the interest in this country. Red Lead is dull, German competition placing the market in an unsettled condition. Litharge is dull, although there is considerable business in the way of delivery on old contracts. In barytes the demand is small, but production is light and prices are steady. In varnish gums the situation is better, and the feeling is one of confidence. Linseed Oil is in fair demand, but the larger dealers are holding off for lower prices.

In Wire Nails there is a good demand, with the placing of some large orders for next season. There is a better feeling among manufacturers, and they seem willing to run their factories so as to make stock. The price at the mills is 85 cents, and $1.25 out of store in New York.

The demand for Cut Nails is moderate, mostly due to the approach of the close of the year.

Barb Wire is improving rapidly, and a fear is brewing that there will soon be a scarcity of stock, as there are indications the business next season will be of large proportions.

Digitized by Google

There is some improvement in carriage bolts, while chisels have developed considerable weakness.

Metals: Iron is in better demand, but there is a sharp cutting of prices still going on. Tin is still on the downward grade, there being a bull and bear contest in London, much to the detriment of values. Copper is dull, the demand being light, and so far as can be ascertained, there are no large orders placed for next year. Lead is dull, the offerings being light, with also a light demand. There is not much confidence in the future of the market. Spelter is dull, with lower prices. In antimony there is a fair demand.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, New York, say in one of their recent weekly circulars with regard to wheat: "Wheat.—English markets practically control wheat values the world over. Liverpool has now about the smallest supply of any Thanksgiving day in a score of years. One-eighth of the English crop may be fed to live stock, and is unfit for bakers' uses. Reported only one cargo of wheat has arrived off the English coast for sale to Great Britain during the past fourteen days, and apparently their stock and supplies are reaching the danger line. Their farmers' deliveries are nearly one-third less since August 1st than in the same time in 1893. The European visible is decreasing at a season when it ordinarily increases. Russia's crop is reported 88,000,000 bushels less than in 1893. Black Sea ports stocks are small. Recently they have been shipping Europe about one-half her supplies. America shipped the United Kingdom about 40 per cent. of weekly requirements. India and Australia have fallen away behind in exports as compared with former years. Many think the Argentine has reached her topmast rung as an exporter for years to come, and will no longer be a prominent factor in depressing values. The combined crops of cereals and coarse grains in the world in 1894 are much less than in 1893, the deficiency being in corn. We believe increased consumption by live stock the world over is equalling about 7 per cent. of the wheat crop grown; that the American consumption by hogs and other live stock is from 12½ to 18 per cent. of the crop grown. Prices the world over average about 40 per cent. less than in 1891. Modern methods appear equalizing the consumption of all food stuffs for man and beast. This may destroy the value of old statistical methods, and prevent increased supplies of cheap grain that can be turned into meats profitably. The world's visible usually reaches its maximum about January 1st. In 1892 the gain from November 1 to January 1, 1893, was about 41,000,000 bushels, same time in 1893 only about 11,000,000 bushels. We expect to see the American visible gain weekly until about Christmas, and the English visible to show no increase for some weeks to come."

THE CHICAGO TRADE.

For Chicago and near-by territory, we are glad to report quite an improvement in the volume of business since our last letter, and also quite a decided improvement in the general feeling of the trade. The election is now a matter of the past, and people have had time enough to get over the surprised feeling at the extent of the change in popular feeling during the last two years. From numerous talks with customers we gather that the feeling among the trade is one of returning confidence; everybody now looking forward to a good business for the coming year, which they now, as a rule we think, expect to commence rather earlier than usual. In fact, present indications point to less interruption in business during the slow winter months than usual. Stocks are so extremely light all throughout the country, and people have been ordering goods in such a hand-to-mouth fashion, that very few sales suffice to exhaust stocks and make further orders necessary. This method of transacting business, while it has undoubtedly been a necessity for the trade during the last year or year and a half, has been very trying indeed for the jobbers and manufacturers, as it necessitates the handling of a great many orders of small proportions, the expense of handling these orders being fully as great as would be the expense of handling those amounting to 50 per cent. more. We hope for a change in this feature of the business, and in fact think there is actually some improvement in this direction.

WOODROUGH & HANCHETT CO.

THE DAVENPORT TRADE.

Water was let into the Hennepin Canal on November 29th for the first time, the event being appropriately celebrated.

Many traveling salesmen came home to eat Thanksgiving turkey and to renew acquaintance with their families and friends.

Manufacturers' representatives, who visit us, say that future orders are placed cautiously, and with more reserve than usual. Another effort to arrange for a more satisfactory way of marketing barb wire has failed, and prices have again dropped, in consequence; buyers are taking advantage of this demoralized condition, and are placing orders freely for prospective wants. Price of wire nails remains ruinously low, and sales are light, even at present figures.

It is to be hoped that the unusual conditions of the present season may not be repeated, and that the experiences of the last few months, producing commercial convulsions, may prevent, in future, any sudden and absolute changes in the policy of this government. Changes are not always an improvement; sudden changes have proved disastrous.

The result of the annual inventories will show small, if any profits, occasioned by the great shrinkage in values, small stock of goods, only a fair amount of book accounts, very few bills receivable, and more cash on hand than usual.

Considering the very low prices now ruling, the small stocks of goods in store, and the abundant supply of money, it would seem that a large trade must be done the coming season.

S.CKELS, PRESTON & NUTTING CO.

THE PHILADELPHIA TRADE.

As the end of the year approaches, trade in staple goods slackens somewhat and holiday goods take their place; and sleds, cutlery, skates and fancy goods are now in good demand, although a couple of weeks of sharp cold weather would materially help trade in all lines of goods.

Jobbers are now overhauling their stocks, preparatory to the usual stock taking, and it is safe to say the wholesale stocks are lighter than in many years, and as full stocks are now almost unknown (so manufacturers tell us), should there be a sudden increase, the demand would probably make a scarcity of goods, which is a "consummation devoutly to be wished."

Prices are in a waiting condition, as manufacturers and buyers alike are waiting to see what turn things will take. Some manufacturers report greatly increased trade during the past two months, but this seems to be somewhat uneven, as from other quarters we hear complaints of light trade.

Wire Nails and Barbed Wire have probably reached their lowest quotations, and factories are very loth to take orders except for prompt shipment. There is also some talk of higher prices in the Wire market, and all wire goods are firmer in consequence. There seems to be a growing disposition to use net prices, and two or three manufacturess have issued, or are about to issue, their prices hereafter in net figures instead of lists and discount. There are some reasons why this should prove of benefit all around. Many retailers find their customers are educated up to the list and expect to buy their goods at a discount; as a result the dealer is compelled to sell odd goods on the same narrow percentage of profit as staples, and while he may be content to sell an eight-inch Strap Hinge

Digitized by Google

(which is sold every day) at a close price, he certainly should not be expected to sell an Extra Heavy T Hinge, 14-inch, of which he may only sell one pair in a year, on the same close margin. Goods which are sold infrequently should pay a better profit than those which are sold every day, and this will probably be a decided help to all classes of trade from the manufacturer down.

Collections are up to the average, although as the end of the year approaches, the annual inventory will probably reveal to some merchants that they are not so well off as they supposed, and in such times as we have had for the last eighteen months it is certainly incumbent that every man should know how he stands.

BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

As we are approaching the end of the year, it is quite natural to look back and meditate somewhat upon the conditions that have ruled during the past twelve months. It is not a very agreeable task, as the early part of the year presented very little that was cheerful,

The depression in business that started in the middle of 1893, continued in full force until the middle of 1894. Since that time the records of almost, if not all, dealers will show that there has been an improvement. It can hardly be called a real recovery, but simply a state of convalescence, accompanied by the firm conviction that the hour for final dissolution has been postponed indefinitely.

It is rather refreshing to turn from the contemplation of such an uninviting field to the future that looms before us. We can already notice that general confidence is being restored, and a conviction settling upon the minds of men that the times will be better; that the unemployed will find a vocation; that mills now running in a half-hearted way will be crowded to their utmost capacity, and that all the present unrest and distress will have vanished as a factor in our daily life.

We share this confidence with the community at large, and believe that during 1895 we will see such a material improvement over our records of 1894. that we shall have new life given to us, and new energy to prosecute our daily business. Accompanied by this hope is also a conviction that we have touched upon an era of low prices, with very little hope of their recovery, to a point anywhere near that of three or four years ago.

Many causes are responsible for this, and it would be a wise man indeed who could define positively just what has brought it all about. The great staples of Hardware, that is, Wire and Nails, continue very low in price, although quite firm at the present prices, and we believe that bottom has been reached.

It would take very little legitimate demand to stiffen prices now ruling considerably, and we believe that the buyers who postpone purchasing until after January, will probably pay a premium for their delay. Stocks of merchandise in the hands of jobbers and in that of retail dealers, are very small indeed, and the moment there is the first movement toward accumulating stocks, such as are carried in ordinarily good times, it must give an impetus to prices that cannot possibly be resisted. We do not care how soon it comes, and believe that we have the full sympathy of all dealers in this opinion.

We wish all your readers a Merry Christmas and Happy New Year, as we shall have no opportunity of greeting them again before those anniversaries roll around.

THE MCINTOSH-HUNTINGTON CO.

THE BALTIMORE TRADE.

A celebrated English writer of the last century, compared Experience to the stern lights of a vessel, which illuminate only the track over which it has passed. This truth forces itself upon us to-day. Viewed in the experience of past years the month of December has usually ushered in a poor benumbed sort of trade, with scarcely any excuse for existence—taken in out of the cold to save it from being frost-bitten. Such is the picture of past years, which experience portrays. This season presents a pleasing contrast. There is a fair business being done, comparing favorably with the best days of November. A healthy, steady demand, not on holiday goods alone, nor even strictly winter goods, but fair quantities of shelf and staple Hardware seems the rule. A sharp cold snap might stimulate sales on certain lines, but when one stops to think of the suffering it must entail on the unemployed, it seems a merciful Providence "has tempered the winds" for these poor unfortunates. Locally speaking, Baltimore to-day has fewer unemployed than this time last year. Many of the works along the water front, which had closed down during the depression, have resumed and are running full time. The rapid transit railway companies, in the construction of new roads, absorbed much of the laboring talent. So much for our own section.

Carefully reviewing the outlook in the South we find, notwithstanding the low price of cotton, much that offers encouragement. For the first time in her history, she is shipping corn to the North. It has been the general belief that the agricultural condition of the Southern States was dependent on the cotton crop alone for profit and prosperity. Whatever foundation there may have been in the past for such belief, the experience of this year certainly proves otherwise. Not only has she raised enough corn for her own use (and her requirements of this cereal are large), but she has produced a surplus for sale outside of her limits. This is a step in the right direction.

Another factor presents itself which cannot be overlooked—the number of cotton mills which have started up in the South. Owing to lack of capital and skilled labor, heretofore, only the coarser grades of goods were manufactured. To-day many of the finer fabrics are being turned out. The growth of these mills, the quality of their product and the surety of a firm hold on the market, augurs well for their future prosperity. One of the best indications of this faith in the future of the South was shown last week. Did you notice how eagerly the securities of the Southern Railway Co. were bought up by a foreign syndicate, while gilt-edge bonds of more apparent value were slighted? As trees are fructified by their own broken branches and fallen leaves, so has the New South out of its past failures and blasted hopes, arisen in a new garb—stronger of limb—with every promise of bearing good fruit.

With the opening of the new year, we look for a decided revival all along the line. Not so much in the way of prices, but in volume of business, judged from the general condition of depleted stocks. We would not, if we could, rehabilitate staples into their old position of false values. The folly of high prices being concurrent with high wages has been pretty well exploded. A fair article at a fair price is more satisfactory all around, both to the manufacturer who produces the article and the consumer who uses it. The one can retire at night without his conscience accusing him of extortion—the other can make his purchases without encroaching on his bank reserve.

In conclusion, there are a few words we would like to add. Several months ago the writer was very favorably impressed by an editorial in HARDWARE advocating the formation of a National Hardware Association. The call was timely, and promises to bear fruit. During the past week we are in receipt of an invitation to attend such a meeting in a prominent city of the West. Coming from the source it does, it carries with it the conviction of success.

THE TABB & JENKINS HARDWARE CO.

THE GRAPHITE TRADE.

The tide which commenced to rise early in August and has perceptibly risen ever since, laved the high water line till the close of November, and orders have been nicely floated off into the hands of fairly eager buyers.

Business has certainly been good in every branch of our manufacture, pencils being a leader, but Crucibles, Graphite Paint, Lubricants and Stove Polish all show a proportional demand. December is with us a quiet month, as we have nothing in the holiday or novelty line, and inventory and general overhauling tend to shorten the days of production. We are booking numberless orders for January delivery, and from the inquiries received daily for quotations and printed matter, the prospect for the opening year makes us smile.

JOSEPH DIXON CRUCIBLE CO.

Jersey City, N. J.

The Niles Tool Works, Hamilton, Ohio are now working two-thirds of their force ten hours in a day. As an evidence of returning prosperity, it may be stated that the pay-roll of this concern has increased over $5000 in the last month.

The wood handle shop of Chilson & Reed, Swift River, Mass., is rushed with orders at present, the hands being compelled to work overtime to keep up with the orders.

Information has just been received that the Yale & Towne Mfg. Co., Stamford, Conn., and New York, have sold to the Brown Hoisting & Conveying Co., Cleveland, Ohio, their entire Crane department, comprising the designing and building of traveling, locomotive, jib, pillar and other cranes. This change took effect on December 1st.

Julius Andrae, No. 225 West Water Street, Milwaukee, Wis., is manufacturer of the Sunbeam Chain Lubricant, which is extensively used by bicycle riders, prices and particulars of which he will furnish on application.

Glasses and cups are now being made with small thermometers, which tell the host and guest the degree of temperature at which the coffee or cocoa may be.

THE RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Bridgewater Centre, Me.—E. L. Lowell.
Broad Brook, Conn.—Joseph Jones.
Canisteo, N. Y.—Carney & Burrell.
Charlestown, Mass.—Bryant Bros.
Essex Junction, Vt.—Seneca Place.
Gardner, Mass.—F. P. Garruth.
Kokomo, Ind.—Armstrong, Ellis & Simmons.
Miner's Mills, Pa.—L. J. Hymen.
Pioneer, Ohio.—Pioneer Hardware Co.
Poultney, Vt.—Michael Holland.
Prescott, Iowa.—W. C. Timmons.
Siloam Springs, Mo.—G. W. Wright.
Sterling, Ill.—William McNell.
Tampa, Fla.—L. B. Lee & Co.
Tower City, Pa.—A. O. Wolf.

Record of Changes.

Arlington, Wis.—F. A. McKillips, Hardware, bicycles, etc., succeeded by McKillips & Bissell.

Brunswick, Me.—Ridley & Jones, Hardware, dissolved.

Canton, Ill.—R. L. Bocock, Hardware, etc., on South Main Street, has gone out of business. Stock purchased by Robert Groskopf, who has taken possession.

Carbondale, Pa.—Jones & Devers, Hardware; John Von Beck has purchased an interest in the company.

Centralia, Wash.—Centralia Hardware Co., H. M. Cutler retired.

Chester, Mass.—George Knowles has sold his stove and Hardware business to H. B. Clark, who will continue it at the old stand. Mr. Knowles has been in business in town for twenty-one years. For the last few months his health has been poor and he has been reducing his stock preparatory to this move.

Cobleskill, N. Y.—Marcus Angle and son, Wm. G., have purchased the Hardware business of Frank Rose, which will hereafter be carried on by them.

Commerce, Tex.—W. J. Taylor, Hardware, succeeded by Taylor & Sedbury.

Dayton, Ohio.—Carey F. Bloomershine, Hardware, sold out.

Deering, Me.—Frederic Jones has sold his interest in the Hardware business of the late firm of Ridley & Jones, Brunswick.

Delavan, Ill.—Darling Bros, of Green Valley, have purchased the Hardware business of Kingman & Duncan.

Elmira, N. Y.—J. E. Stowell & Co., Hardware, succeeded by J. M. Diven.

Exira, Iowa.—Marshall & Sharp, Hardware and implements, sold stock to E. A. Rea, who has taken possession.

Ft. Madison, Iowa.—J. W. Matthews, the West End Hardware dealer, has sold his store to Kelly & Behm, of Axtelle, Kan.

Glen, N. Y.—J. Bunn, formerly employed by J. S. G. Edwards, has gone in partnership with I. A. Yates, in the Hardware business, under the firm name of Yates & Bunn.

Grand Island, Neb.—A. C. Lederman, Hardware, succeeded by the A. C. Lederman & Co.

Grand Valley, Pa.—J. G. Nesenson has disposed of his Hardware store to W. R. Westbrook, of Elmira, N. Y. C. L. Frost, of Cherry Grove, N. Y., has been placed here as local manager.

Houston, Tex.—The Western Hardware Co. have recently purchased the Hardware stock of T. W. Smith.

Independence, Iowa.—R. R. Plane & Co., Hardware, have dissolved partnership.

Indianapolis, Ind.—Harvey G. Carey, who has been a member of the Van Camp Hardware Co. since its organization, has retired, Courtland Van Camp and David D. Bergundthal purchasing his interest. Dr. Carey is in ill health, and for this reason has determined to withdraw from active business. He has been the vice-president of the company, Mr. Van Camp occupying the position of president and Mr. Bergundthal secretary and treasurer.

Jameson, Mo.—Reed & Dunn, Hardware, succeeded by J. P. Reed.

Jamestown, N. Y.—The Clark Hardware Co. have purchased the remaining stock of the Johnson Hardware Co., and will incorporate the same in the stock at the Main Street store.

Kingston, Mo.—C. A. Gilliland, Hardware, sold out.

Lacey, Ark.—E. P. Zachary, Hardware and stoves, succeeded by Sherwood Baker.

Ladoga, Ind.—Ed Lidakay has purchased a half interest in the Hardware store of James Knox.

Record of Improvements.

Fargo, N. D.—Hance Bros., Hardware, are moving into larger quarters on Front Street.

Ft. Dodge, Iowa.—J. W. Ryan is selling his Hardware stock, preparatory to moving into his building in the rear of his present quarters.

Johnstown, Ohio.—R. C. Frederick's new Hardware store is nearing completion.

Lancaster, N. H.—L. I. Moore & Son's new store is about finished; it is 190 feet long and four stories high, and is the largest Hardware store in New England.

Metamora, Ill.—W. H. Peard will move his Hardware store into larger quarters about the first of January.

Newton, Iowa.—M. L. Sturtevant is getting his stock of Hardware in place in the Smith block.

Pittsfield, Mass.—The Peirson Hardware Co. are making extensive improvements to their store.

Salem, N. Y.—George W. Baker is taking an inventory of his stock of Hardware and moving it to his new building, which is rapidly nearing completion.

South Akron, Ohio.—The Akron Hardware Co. are building an addition to their plant.

Watertown, N. Y.—Charles Partello, who for many years conducted a Hardware and repair establishment on the north side of Public Square in this city, has removed his stock of goods to No. 1 Academy Street, where he is conducting business as before.

Waterville, Me.—Hanson, Webber & Dunham, Hardware dealers, have purchased a lot on Main Street and will build a four-story brick block in the spring which will be used exclusively in their business.

West Stewartstown, N. H.—G. A. Ripley & Co. have moved their Hardware business into Lyman's store and will now increase their stock, adding several new lines.

Business Embarrassments.

Carrollton, Pa.—P. J. Dietrick, the well-known Hardware dealer, has made an assignment, Joseph A. Gray being appointed assignee. Mr. Dietrick's embarrassment is said to have been caused by the hard times and his inability to collect outstanding accounts.

Gonzales, Tex.—W. M. Kehl, Hardware, etc., made an assignment to Everett Lewis, assignee. Liabilities, $2357; assets, $3000.

Meriden, Conn.—H. E Gay, the furniture and Hardware dealer in McFarrell's block on West Main Street, has made an assignment, naming Attorney H. King as trustee.

Munda, Ill.—D. L. Barney, Hardware merchant, has closed his doors and made an assignment for the benefit of creditors. This was done to avoid executions in favor of Chicago creditors. He had apparently been doing a prosperous business, but it is now said started with little capital, lost heavily by a bank failure last summer and has been unable to collect outstanding accounts. No statement of assets and liabilities can be obtained.

Nashville, Tenn.—J. T. Williams, a Hardware dealer, doing business at No. 323 Broad Street, has assigned to the Nashville Trust Co. Figures not given.

Sioux City, Iowa.—Gillette Bros., Hardware dealers, failed for $15,000 to $20,000.

Warrensburg, Mo.—C. A. Magon, Hardware, has made an assignment for the benefit of creditors. Assets and liabilities unknown.

Burglaries in Hardware Stores.

Coldwater, Mich.—Kerr Bros., $40.
Dubuque, Iowa.—Ransom Bros., $100.
Kokomo, Ind.—Hutching Bros., $500.
Leonard, Tex.—C. C. Vawters, $50.
Lorain, Ohio.—N. C. Alten, $30.
Newark, Del.—H. B. Wright & Co., razors.
Rochester, N. H.—I. B. Moore, revolvers.
Sharpsburg, Iowa.—O. Boyer, $200.
Sidney, Ohio.—W. H. Wagner, $500.
Temple, Tex.—J. F. Hollingsworth, knives.
Watertown, N. Y.—O. B. Gaffey, cutlery.
Williamsburg, N. Y.—Frederick Riecht, $270.
Zanesville, Ohio.—George E. Crossman, $100.

Fires in Hardware Stores.

Austin, Tex.—W. Richardson, Hardware, partly burnt out; fully insured.

Akron, Iowa.—Bly Bros., Hardware, bicycles, etc., partially burned out; covered by insurance.

Cross Forks, Pa.—A Hardware store and blacksmith shop owned by Richard Sullivan, was destroyed by fire. The loss is about $500.

Gananoque, Ont.—T. W. Bennett & Sons Hardware and tin shop was badly damaged by fire some days since.

Hiattsville, Kan.—R. T. Williams, lumber and Hardware, reported loss by fire.

Lockport, Tex.—Burrows Bros., Hardware, reported burnt out.

Marion, N. C.—W. P. Jones, Hardware, bicycles, etc., burned out; partially insured.

Paris, Tex.—Thomas Bros., Hardware, etc., destroyed by fire, at an estimated loss of $3000.

Pittsburg, Pa.—Bovard, Seyfang & Co., Hardware store, on Ohara Street, destroyed by fire.

Tulare Cal.—Lindar Hardware Co.; loss, $3000; insured, $1500.

West Lynn, Mass.—Joseph McGilvarey, plumber and Hardware dealer, destroyed by fire, at a loss of $500.

Wynne, Ark.—M. O. Burton, Hardware, damaged by fire.

Length of Jaw, 4½ in., opens 4¼ in., weight, 83 lbs., $15.00.

UNIVERSAL COMBINATION VISES.

These Vises are very handy mechanical appliances for general use, as they combine two different and separate vises in one. They are made very strong, and will swivel in any direction. The "Combination Pipe and Metal Workers' Vise," for instance, will be found a very useful and practical instrument in every engine room, as the engineer, with the aid of a few pipe tongs and die plates, can, in most cases, do all the small repairing and fitting of pipes, etc., himself.

PATENT APPLIED FOR

UNIVERSAL COMBINATION PIPE AND METAL WORKERS' VISE.

No 102. Length of Jaw, 4½ in., opens 4½ in., and will take from ⅝ in. diameter to 3 in. pipe; weight, 80 lbs. $15.00

No. 103. 3 in. Jaw, opens 4¼ in., and will take from ⅝ in. to 2 in. diam. pipe, wt., 52 lbs.$12.00

These Vises have been manufactured by us since 1865 and meet with general favor. They are strong and simple. Every Vise Warranted. Liberal discount to the Hardware Trade. Orders solicited.

Howard Iron Works, · Buffalo, N. Y.

A New Hinge, Challenged to any on the American Market. They Bear the Highest Indorsement from all who have used them.

The "Superior" Spring Hinge for House Gates.

Suitable for Square Posts.

Tested Compound Springs. Rustless Finish. Weather Proof.

These Hinges are Adaptable to Numerous Purposes.

Made of Malleable Iron, and will not Break.

Exact size cut of Nos. **2750, 2749.**

Use Three Hinges on Wide Gates and Extra Heavy House Gates.

A TRUE GATE HINGE. Swings both ways, does not raise the gate as ordinary hinges do, but opens level. Is self shutting and always stops at the centre. Has no parts to get loose or out of place, is easily applied and cannot get out of order. When adjusting, TIRE BOLTS OR WOOD SCREWS may be used for both post and gate, or either, thus covering all requirements. Any catch can be used with these Hinges. None, however, are necessary.

No. 2750, JAPANNED, . . For Square Posts, . . Per Doz. Pairs, $

HOLIDAY GOODS.

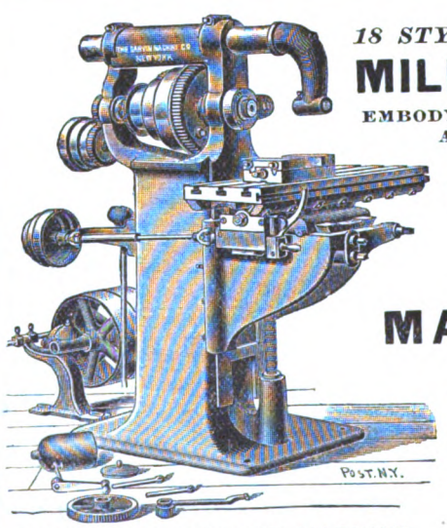
Many kinds of Scroll Saws have been put on the market by ourselves and other manufacturers during the past twelve years. Of these only a few have proved good enough to remain in demand. The call now is for a well-made practical machine, and all second-class ones are of slow sale.

Those who want a good Lathe with scroll-Sawing attachment and all Tools and Improvements to the very latest moment will buy the Goodell Lathe.

Those who want only a Scroll Saw with Drilling Attachment and Rubber Blower will prefer the Rogers Saw.

These two machines are taking the place of all others, and are now the most in demand throughout the world.

No dealer can make a mistake by laying in a stock of them. About Christmas time they are wanted in every town, and will make business lively at this otherwise dull season.



We also keep a full stock of Designs, Wood, and all other Scroll Sawing goods.

Price of Goodell Lathe complete, $12.00.

Price of Rogers Saw complete, $3.50.

Bye and Bye, When the Goods Times Come,

People will want screens and they will want the best.

"We don't say we are Democrats," but we are in shape to furnish **the best** at the prices of inferior goods. In other words, **Republican Goods at Democratic prices!**

Nursed by the Tariff, if it were not for our competitors, we would have **The Monopoly of the Screen business.** Canadians pay 30 per cent. duty and buy our goods; so, even if our government had cut down the tariff on screens, **in order to reduce the surplus,** we would still be a monopoly, if it were not for our competitors.

However, the common people of America have been able to buy over four millions of Phillips screens and to enjoy **comfort unknown to our ancestors or to the common people of other countries.**

This has enabled us to grow from a small beginning to a capacity of 5000 screens per day, by originating desirable patterns and making reliable goods. You will want to see

Our New "Flyer" Window Screen
(Without center bars or wings.)

Our New Northwest Window Screen Frames
(With pressed steel corner plates.)

Our New "Standard Oil" Screen Door,
(The cheapest of decent Fancy Doors.)

All of which will be illustrated and described in the first January number of "HARDWARE."

EVERY OWNER OF A HOUSE

ought to know about the "Salem" hanger. A DOZEN TENANTS can hang a DOZEN DIFFERENT WIDTH shades and not use a screw A HOUSE TEN YEARS OLD with the "Salem" on the casing will not have one damaging screw hole, where a house without it will show HUNDREDS. The hardware trade gladly supplied with samples and prices.

The W. A. South Co., Salem, Mass.

Parlor Door Hangers

The Adjustment is in the Track and not in the Hanger, as in other fixtures. Track can be taken out of pocket and replaced without defacing walls after house is finished.

Highest Award at World's Fair, 1893,

—ON—

Parlor, Barn and Fire Door Hangers.

THE HANDY STOVE POLISHING MITTEN.

The above illustration will give a fair idea of its appearance. It will easily fit the hand, has a waterproof back, and the whole front is made of durable and soft sheepskin, tanned with the wool on. By using the Stove Polishing Mitten blacking a stove ceases to be dirty and disagreeable, it will make a stove shine like a mirror. The Mitten is also useful for polishing household furniture. It cannot scratch the most delicate material or varnish, while the finest possible polish can be rendered.

The Polishing Mitten can be put to many uses. Sells to almost every person you meet, always gives satisfaction. Among the uses to which it may be put are:

Polishing Stoves, Ranges, etc., it has no equal.

Cleaning and Shining Windows, Show Cases, and other Glassware, the Mitten is highly satisfactory.

Polishing Nickel-Plated Ware, such as Bicycles, Machinery, etc., the Mitten is becoming more popular daily.

Polishing Boots and Shoes, the Mitten is as much superior to a brush as a brush is to a stick. Where once used it is "a joy forever."

Cleansing and Polishing Furniture, use the Mitten and Dauber. The results are always pleasing.

Polishing Brassware, Tinware, etc., the Mitten serves the purpose better than anything else.

Manufactured expressly for the trade. They sell fast wherever introduced to HARDWARE DEALERS.

We will quote you low prices and only ask a trial order. 2 kinds of mitten and dauber made, both kinds samples 30c. to Dealers.

HANDY STOVE MITTEN MANUFACTURING CO., 122 Pearl Street. Boston, Mass.

No Disagreeable Odor. No Ashes. Light and Heat in Abundance.

No. 327. No. 3 Lift Burner. Height, 33½ inches. Spread of Base, 12½ inches. Nickel Finish.

THE MILLER OIL HEATERS.

Just the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

They are an Assured Success, from the fact that the Lamps used are "The Miller Lamps" THE LATEST AND BEST.

IN THESE HEATERS YOU HAVE A HAPPY COMBINATION: The Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGE MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

A MOST IMPORTANT FEATURE.

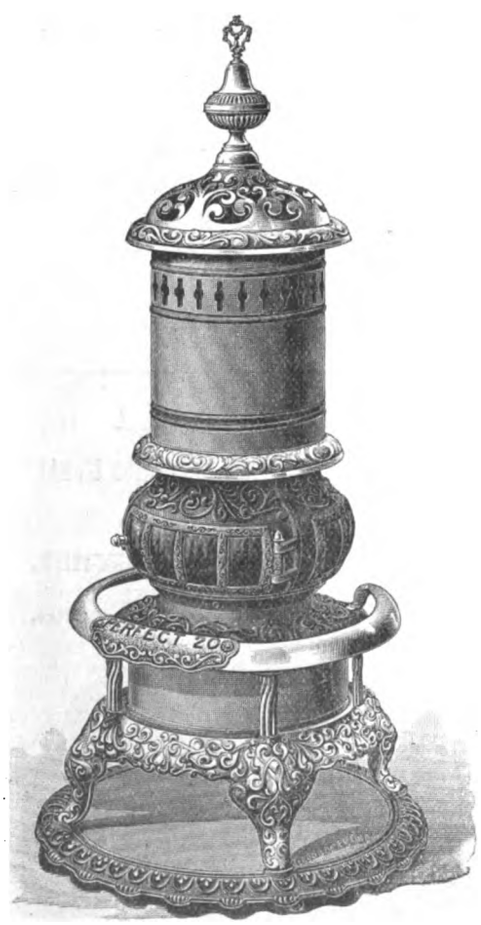
☞ All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

——MANUFACTURED BY——



EDWARD MILLER & CO., MERIDEN, CONN., United States of America.

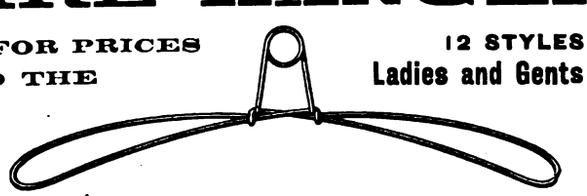
B. & W. SKATE SHARPENER.

—BEST SELLING IN THE MARKET.—

Handy to carry, does the best work, is made of malleable iron, full nickeled; the handsomest article of the kind on the market.



By its use the dullest pair of skates can be sharpened in five minutes, by any child old enough to skate.

In use, the side of the Sharpener forms a right angle with the file, making it practically impossible to file anything but a true plane on the skate, or to round the edges. As the file wears, it can be moved its full length on four sides, thus giving a great amount of filing surface. Put up one dozen in a box. Write for price.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Help Wanted.

WANTED—Experienced salesman to represent staple line to the Hardware trade, upon commission in New York, Pennsylvania, West Virginia, etc. Address, "Business," care HARDWARE, 143 Chambers Street, New York City.

A MANUFACTURER of high grade pen knives, scissors, razors, etc., desires to correspond with six first-class Hardware or cutlery salesmen of unquestioned ability to represent him after January 1st. The line comprises the handsomest as well as the most complete of any line on the market. Unexceptional opportunity for really first-class men. Address in confidence, stating fully for whom you traveled, how long, and territory covered. Hustler, care HARDWARE, No 143 Chambers Street, New York.

HARDWARE and Cutlery salesman for New York City and vicinity; also salesman for New York and New Jersey. Address H. J. C. & Co., care HARDWARE, 143 Chambers Street, New York.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Situations Wanted.

SITUATION wanted as Die-maker. Experienced in cutting, forming and drawing work, plain or combination. Address D. M., care HARDWARE, 143 Chambers Street, New York City.

WANTED, by a young married man, twenty six years of age, position in wholesale or retail Hardware store. Experienced. Best of references. Address O. L. Barber, Tupper Lake, Franklin County, N. Y.

WANTED position as Hardware salesman, Builders' Hardware especially. Have had several years' experience in a first-class house. First-class references. Address Frederick J. Schwarz, No. 2 Willow Street, Brooklyn, N. Y.

A1 CUTLERY salesman with New England, Middle Atlantic States and local trade, wants situation at once. Is also Hardwareman. Address Traveler, care HARDWARE, No. 143 Chambers Street, New York.

A PRACTICAL designer and model maker, who has some original ideas that he wishes to make practical use of, would like a position with some company or firm who are open to business of that character. Address Model, care HARDWARE, No. 143 Chambers Street, New York City.

A PLUMBER. Fully experienced and competent; capable to take charge; quick workman; moderate wages; city or country. H. Webber, care of S. Fullerton, No. 228 Chrystie Street, New York City.

AN experienced traveling man desires position with manufacturing concern to represent them in one or more large cities. Best of reference. Address A. J., care HARDWARE, No. 143 Chambers Street, New York.

Agencies for Hardware Specialties Wanted.

AN active, reliable salesman, having a large acquaintance among jobbing and retail Hardware, housefurnishing and department stores in New York, Philadelphia and the South, desires a manufacturers' agency. Specialties preferred. A-1 references. Address, S. B., care HARDWARE, 143 Chambers Street, New York City.

TO Hardware Manufacturers and Importers: I want to handle on commission, in Chicago and vicinity, Hardware and house-furnishing specialties. Am a hard worker, and am well acquainted with the jobbing and retail trade. Good references. Address Energy, care HARDWARE, No. 143 Chambers Street, New York.

A BUSINESS man and salesman of twenty-five years' experience, capable and reliable, desires a manufacturers' agency—either Hardware specialties, supplies for gas, steam, water and oil, or a line of housefurnishing goods for domestic and export trade. Highest reference, given. Address Wallace, care HARDWARE, No. 143 Chambers Streets New York.

ARE you represented in Rochester, N. Y., a prosperous, wealthy growing city of 150,000, and the trading and manufacturing centre of a large section of the State? A gentleman of many years' business experience, of good judgment and well posted in commercial law, desires to represent a manufacturing, wholesale or jobbing house. Address P.O. Box 165, Clarkson, N. Y.

AN experienced salesman with extensive acquaintance among the larger buyers of builders' Hardware, calling frequently on the trade in Philadelphia, Pittsburg, Baltimore and Boston, and having office in New York City as agent for a first-class manufacturer, is anxious to represent an additional company. Address W. H. E., care HARDWARE, No. 143 Chambers Street, New York.

A **HARDWARE commission house** of New York City, centrally located, with ample room for samples and stock, and abundance of capital to carry out any agreement or contract which they may enter into, wish to **negotiate with manufacturers of staple lines of Hardware or specialties.** For further particulars, address Commission, care HARDWARE, No. 143 Chambers Street, New York.

Side Lines Wanted.

WANTED by traveling man, long experience in New York State and Pennsylvania, Hardware specialty as side line, which will pay well for good work. Address Traveler, New Osborne House, Rochester, N.Y.

TRAVELING salesman wants A1 specialties or to represent a manufacturer or a line of goods in New England. H. Hayden, No. 667 Salem Street, Maplewood, Mass.

Side Lines Offered.

WANTED—Traveling salesmen, to solicit the retail trade on a staple line of washing machines, of high grade. Liberal commissions to parties with good references. Horton Mfg. Co., Fort Wayne, Ind.

EXPERIENCED salesmen wanted to sell the best garden tool on the market. Sells to Hardware and implement houses; States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio; also for New England States. Address Lock Box 545, Rock Falls, Ill.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No. 115 North Vine Street, Hazleton, Pa.

For Sale.

A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.

EXPANSION BOLTS

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., 29 Murray Street, New York City.

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made **Smokeless Schultze Powder** famous all over the world, while its **hard flinty grain** and specially regulated moisture makes loading so easy that any amateur can now do so successfully

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U.S. Agents

Von Lengerke & Detmold, 8 Murray St., New York.

1895

Columbia Bicycles, $100.
Hartford Bicycles, $80.
Wizards, $60, $50.

The above will unquestionably be the easiest line of bicycles to sell in 1895, and the dealer who has the exclusive Columbia agency for his vicinity will be fortunate. We invite correspondence with enterprising firms of good standing.

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

Can be sold by all Hardware dealers.

H. K. PORTER, 66 Beverly St., Boston, Mass., U. S. A.

BABBITT METAL.

We make Babbitt and Anti-Friction Metals by standard formulas, and never vary the formula to fit the price. The result is that our Metals are always the same uniform high quality, and we hold our trade.

Save fuel, machinery, time and annoyance by using Babbitt or Anti-Friction Metal that is adapted to the particular Journal in which it is to be used. Friction means loss of power.

Get our pamphlet on Anti-Friction Metals.

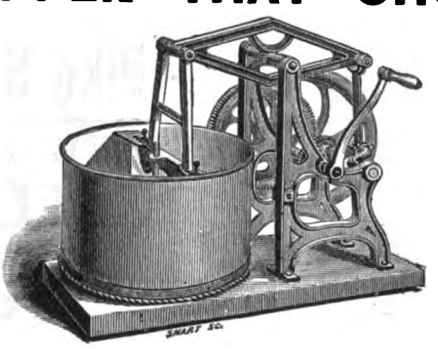
A QUESTION. Why do all Sportsmen prefer

EUREKA GUN IMPLEMENTS?

THE ANSWER

Is because the No. 0 Closer gives a square crimp; the No. 95 Cleaning Rod is made just the right weight and length for all guns; the Powder Measure No 20R is standard for all grades of powder, and the complete line is **UP TO DATE.**

Just added a complete set of Cleaning Tools to our Eureka Line No. 164, containing No. 95 Cleaning Rod, Flannel Wiper, Steel Wire Scratch Brush, Bristle Brush, Bottle of Oil, Tube of Paravaseline, Oil Can and Screwdriver. $1.25 per set.



Ask Your Dealer to Show You This Set.

Continuous Roofing Tin.

CONSIDER EVERYTHING and see if you don't find it cheaper and better to use "TANDEM" than to use any other equal grade of roofing

It is easier to lay than ordinary roofing and it makes a better roof.

Our "TANDEM" is made in sheets 20 and 28 inches wide and 96 inches long. The seams are locked together, end to end, making a straight continuous course containing 100 square feet. The seams are soaked on both sides during the coating process, and are as strong and impenetrable as the solid sheet. Such courses are particularly useful in gutters and valleys.

It is ready to use the moment you unroll it. No re squaring, no trouble, no lost time, no waste tin. Every inch of it goes directly on the roof in absolutely straight courses.

It affords a saving of labor and solder. A square of it will cover more roof than a square of 20x28 loose sheets. These are the reasons why every roofer should use it.

There are other points worth considering: (1) While all the plates are full weight (I C thickness), the shipping weight of a square of "TANDEM" is less than that the same quantity of 20x28 sheets. (2) We can ship direct to where the goods are to be used. If you're working away from home this saves freight charges double handling, and time If you care to know more about "TANDEM" CONTINUOUS ROOFING TIN write us. Prompt shipments can now be made

OHIO KNOCK-DOWN STOVE PIPE.

THE Ohio Stove Pipe is the only practicable, durable Smoke Proof Knock-Down Stove Pipe made that needs no directions for putting it together. The Ohio Stove Pipe's peculiar construction enables any person to easily put it together or take it apart. A number of the Ohio Stove Pipe Joints put together will make a continuous line (46 ft. long if desired) of perfectly firm, smoke-tight pipe that will not collapse.

The Ohio Stove Pipe is always shipped in crates of 25 joints of the following sizes:

4 in....per crate. 5 in....per crate. 6 in....per crate. 7 in....per crate
4½ in.... " 5½ in.... " 6½ in ... "

Ask your jobber for this stove pipe; if he does not keep the Ohio, write us.

A Perfect Shelf Bracket

—MADE OF—

WROUGHT STEEL.

Light! Strong! Elegant!

PATENTED.

As a result of long and careful study and much experimenting we are able to offer the trade a

STEEL SHELF BRACKET

which is far superior to anything of the kind heretofore produced, and which we believe to be a

PERFECT ARTICLE!

We base our faith in these assertions on the following points of

SUPERIORITY:

1.—The use of the **arched** or **angle** forms of steel in the wall and shelf plates, which gives **much more strength** with less metal than if made flat.

2.—The **Corrugation** of the brace, which renders it secure against buckling or bending sideways under the severest strain.

The application of these principles makes a **Light, but very Strong Bracket.**
